

KING'S
HADD-BOOK OF
BOSTON

ILLUSTRATED

**BOSTON
PUBLIC
LIBRARY**

TRUE WOMANHOOD. By Rev. FRANKLIN JOHNSON, D.D. A book giving invaluable hints on the formation of true womanly character. 160 pp. Cloth, \$1.00.

SELECTIONS FROM THE SCRIPTURES. By Rev. DAVID G. HASKINS, D.D. For use in schools and families. 400 pp. Cloth, \$1.50.

WALTHAM, PAST AND PRESENT. By CHARLES A. NELSON, A.M. An historical and descriptive sketch from the earliest times. 55 clear photographic illustrations. 152 pp. Cloth, \$2.50.

THE REVOLUTIONARY MOVEMENT IN RUSSIA. By IVAN PANIN. A clear and able statement of the present epoch in Russia. Mainly a reprint from "The New-York Herald." 32 pp. Pamphlet. 20 cents.

THE POETS' TRIBUTES TO GARFIELD. By fifty authors. This collection of fifty poems includes the twelve owned by "The Boston Globe." 80 pp. Paper, 25 cents.

DEAN'S INTEREST AND EQUATION EXPONENTS. By ALBERT F. DEAN. The simplest, most convenient, and most rapid method of ascertaining interest or average dates. Half-leather, \$5.00.

THE BOSTON PUBLIC LATIN SCHOOL. By Rev. HENRY F. JENKS. An illustrated historical sketch. 32 pp. Pamphlet. 25 cents.

HARVARD AND ITS SURROUNDINGS. By MOSES KING. An historical and descriptive guide to all departments of Harvard University and Cambridge. 70 illustrations. 120 pp. Cloth, \$1.50; paper, \$1.00.

KING'S HANDBOOK OF BOSTON. By MOSES KING. A comprehensive detailed description of Boston. 332 pp. 200 illustrations. Cloth, \$1.00.

HANDBOOK OF MOUNT AUBURN CEMETERY. 100 pp. 30 illustrations. Paper, 30 cents.

KING'S POCKETBOOK OF CINCINNATI. By MOSES KING. An alphabetical guide. 80 pp. Cloth, 35 cents.

BENJAMIN PEIRCE. A collection of sermons, biographical notices, resolutions, and poems, forming a neat memorial volume of America's great mathematician and astronomer. With portrait. 60 pp. Cloth, \$1.00; paper, 50 cents.

THE BACK-BAY DISTRICT AND THE VENDOME. A profusely illustrated pamphlet, 32 pp., describing Boston's "Back-Bay District" and the Hotel Vendome. 25 cents.

VEST-POCKET MAP OF BOSTON. A neat map of Boston proper, bound in red leather, small enough to put into a lady's pocketbook. 15 cents.

THE HARVARD REGISTER. A monthly illustrated magazine. Bound in half-morocco. Vols. I. and II. (together), 354 quarto pages, \$3.15. Vol. III., 450 octavo pages, \$3.00.

*** The above books can be bought of any American or Foreign book-seller, or they will be sent to any address, postpaid, on receipt of price.*

PREFACE TO FOURTH EDITION.

RL

THIS edition of KING'S HANDBOOK OF BOSTON is offered to the public as the first (regular) yearly edition, to be issued on the first day of every June. It is but a poor indication of what may be expected; for hereafter every important addition to the many interesting features of Boston will, in the succeeding edition, be noticed, and probably illustrated; and the less important illustrations and descriptions will be left out. Every fact, name, and figure will be changed so as to be the latest and most positive information obtainable on the day of each issue. By this means KING'S HANDBOOK OF BOSTON will be practically a new book each year: and it is hoped that those people who desire Boston to have a handsomely printed and well-illustrated, correct, comprehensive, and low-priced guide and reference book, will be generous enough to buy the successive issues, just as they would buy the successive issues of an almanac, a city directory, and other annual publications. The constant aim will be to make each issue fully worth its low price of only one dollar a copy in cloth and gilt binding.

Now that the work has been accepted as the best of its kind ever issued for Boston, the undersigned feels justified in mentioning the names of the friends who helped him on the several editions already issued. He is indebted chiefly to Edwin M. Bacon for a large part of many chapters; to William Howe Downes for many paragraphs; and to Dr. Samuel A. Green and John Ward Dean for their very able and extremely generous reading and revision of copy and proof-sheets.

Any one noticing a serious omission, or having what may seem a good suggestion for the improvement of the book, will confer a great favor by corresponding with the undersigned.

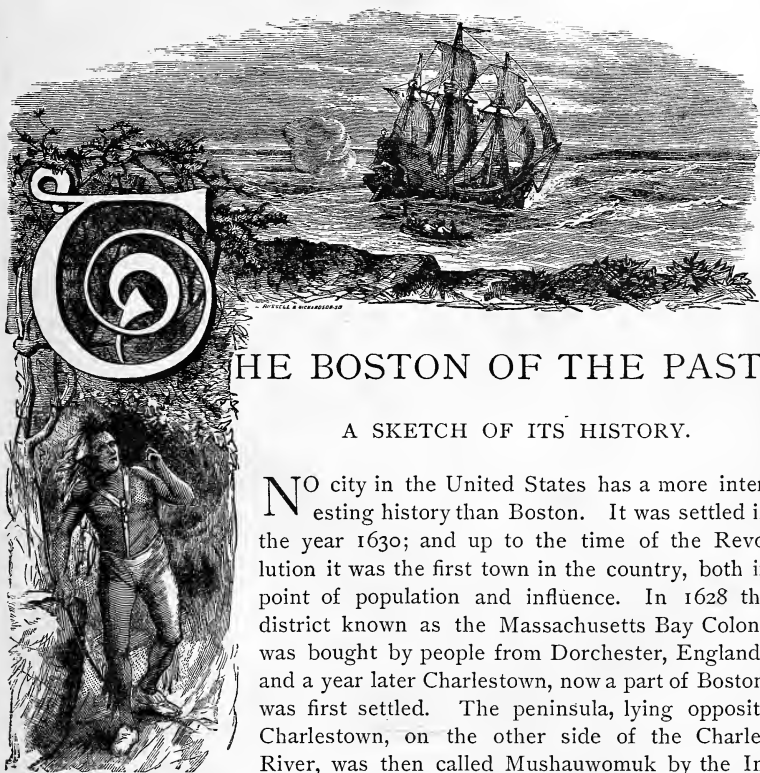

MOSES KING, *Editor and Publisher,*

THE BOSTON OF THE PAST.

A SKETCH OF ITS HISTORY.

NO city in the United States has a more interesting history than Boston. It was settled in the year 1630; and up to the time of the Revolution it was the first town in the country, both in point of population and influence. In 1628 the district known as the Massachusetts Bay Colony was bought by people from Dorchester, England; and a year later Charlestown, now a part of Boston, was first settled. The peninsula, lying opposite Charlestown, on the other side of the Charles River, was then called Mushauwomuk by the Indians, which is said by some historians to have signified "living fountains," and by others "free land," or "land unclaimed;" and this afterward became abbreviated to "Shawmut." Winthrop and his associates, who settled it from Charlestown, called it Trimountaine, probably from its three hills afterwards known as Beacon, Copp's, and Fort Hills, though possibly from the three peaks of Beacon Hill, described in 1633 by Wood the voyager as "three little hills on top of a high mountain." The first settler here was the Rev. William Blaxton, who lived between the present Louisburg Square and the Charles River. He held an unquestioned proprietorship to the whole peninsula of Boston; and when his ownership was recognized by the court, each householder agreed to pay no less than

six shillings to make up the required sum of £30 to buy of him all but six acres where his house stood. This was accomplished; and with the purchase-money he bought some cows, and "moved on," establishing himself

First House in Boston.

in a new home at a point then far away from Boston, on the banks of a picturesque river, which is now known as the Blackstone, named after him.

Ann Pollard, who lived to the ripe old age of 105, is said to have been the first white woman that landed in Boston. According to her story, she came over in one of the first ships that reached Charlestown; and a few days afterwards a party of young people rowed to Boston to get some good water. As the boat neared the

shore, she, being a romping girl, declared that she would land first, and immediately jumped from the bow to the beach.

In 1630 the first general court of the colony was held in Boston. John Winthrop was the first governor elected by the colonists, and Thomas Dudley the deputy-governor. Had these two carried out their plan of fortifying "New-towne," the present Cambridge, the result would possibly have been, that either the latter, or some other town, would have become the New-England metropolis, instead of Boston. Winthrop, however, after he and others had built houses at New-towne, saw that Boston was the most promising site, and consequently abandoned the project, causing thereby the enmity of Dudley. This circumstance, possibly combined with jealousy, led to unfriendly disputes between those two magnates, which had to be settled by arbitrators. The old beacon, shown in all the early plans of the town, and which gave the name to Beacon Hill, was erected in 1634-5 to alarm the country in case of invasion. It stood near the present State House, the exact spot being the south-east corner of the reservoir on Temple Street. It was a tall mast, standing on cross timbers placed upon a stone foundation, supported by braces, and was ascended by treenails driven into it; and, sixty-five feet from the base, projected a crane of iron from which an iron

QUARREL BETWEEN WINTHROP AND DUDLEY.

skeleton frame was suspended, to receive a barrel of tar or other combustibles. When fired this could be seen for a great distance inland. It was newly erected in 1768, having fallen from some cause unknown; and in 1789 it was blown down. The next year a monument of brick, sixty feet high and four in diameter, was erected on its site to the memory of those who fell at Bunker Hill; and in 1811 this was taken down, the mound being levelled.

The happiest people are those who have no history; and there is not much of moment to record concerning this thriving town during the first century of its existence. A few interesting facts from the quaint records of the early day will show the state of society and public opinion. From 1637 up to 1676, in the pages of local history can be found cases where persons were either banished from Boston, or murdered on account of heresy, hung on charges of witchcraft, punished for petty misdemeanors by imprisonment in the stocks, whipped or fined for being Baptists, persecuted in various ways for being Quakers, or placed in cages for violating the sabbath. Up to the last century, too, slavery existed in Boston. In 1655 times were very hard; and many inhabitants paid their taxes with produce, grain, and other articles. The town also suffered from extensive fires in 1676, 1679, 1711, and 1760; over 350 buildings being destroyed in the latter conflagration. In 1686 there was trouble between the colony and the home government; and Andros, an unpopular governor, was imprisoned by the people in 1689, and finally forced to leave the country. The colonial charter was withdrawn; but in 1692 came a new governor, with an olive-branch in the shape of a new charter, and the troubles temporarily ceased. Edward Ward, a cockney traveller, thus described the young town in 1699: "On the south-west side of Massachusetts Bay, is Boston, whose name is taken from a town in Lincolnshire, and is the Metropolis of all New England. The houses in some parts joyn as in London. The buildings, like their women, being neat and handsome. And their streets, like the hearts of the male inhabitants, are paved with pebble."

The first attempt to establish a paper was made in 1690, and the first number is held by the Colonial State Paper Office at London. A copy of this, by Dr. Samuel A. Green, was published in vol. i. (1857) of "The Historical Magazine." The first newspaper in America was issued in Boston, its publication beginning on April 24, 1704. It was called "The Boston News-Letter." Its founder was John Campbell, then the town postmaster; and the first number may yet be seen in the library of the Massachusetts Historical Society. In 1706 Benjamin Franklin was, it is very generally believed, born in the humble little house which stood on Milk Street, on the site of the present "Boston Post" building. The old house stood a hundred and twenty years, respected as one of the most notable landmarks; and its destruction by fire, in 1811, was keenly regretted, especially by the

From "Pioneers in the Settlement of America." Estes & Lauriat, Boston.
ANDROS A PRISONER IN BOSTON.

older citizens. A few persons say that Franklin was born in Hanover Street. In 1728 two young men fought a duel on the Common, one of them being killed. This caused the passage of a stringent law against duelling. The

Franklin's Birthplace, Milk Street.

same year the general court was removed to Salem. Boston was now divided into twelve wards, it having been previously, in 1715, divided into eight wards; and in 1740 it had five public schools and fifteen churches.

Not long after began the exciting displays of opposition to the oppressions of the home government, and the petty tyrannies of some of its representatives in the colony. The citizens were jealous of their rights, and ever ready to strike for them. In 1747 Commodore Knowles of the British navy, being short of men, openly impressed sailors in the streets of the town; and thereupon

there was a lively riot. The excitement ran high. Some British officers were seized, and were held as hostages by the irate townspeople until the release of their fellow-townsmen; and the commodore was obliged to submit, and to return the impressed men when the officers were in turn released. In 1750 an indignation meeting of citizens was held to protest against the heavy duty levied on tea and other articles of import. In 1765 the "Sons of Liberty" were organized under the "Liberty Tree," a wide-spreading, beautiful elm, which stood in front of a grocery, near what is now the corner of Essex and Washington Streets, a tablet on the present building marking the spot; and here were exposed the effigies of those men who had favored the passage of the odious Stamp-Act. During the exciting period which followed, nearly all the great political meetings of the "Sons of Liberty," called together by the hoisting of a flag on the staff extending through the branches of the tree, were held under its waving boughs and in the square about it. During the siege of Boston, about the last of August, 1775, this tree was cut down by a gang in the pay of the British soldiers and the Tories, after standing 119 years. In 1770 there was continued excitement about, and opposition to, the unjust revenues imposed by the home government; and we read of an anti-tea-drinking society that was formed by the ladies. On the 5th of March of this year the Boston Massacre occurred, in which five citizens were killed

and several wounded by the British soldiers. The affair grew out of a trivial street-brawl between the parties in King, now State, Street. Such was the feeling caused by the massacre, that it was deemed expedient by the British authorities to withdraw the troops from the town. This massacre was, however, only the cloud before the storm; for Boston was soon to be the centre of warlike operations on a large scale. Dec. 16, 1773, the memorable "Boston tea-party" occurred; in which a number of citizens disguised as Indians boarded several English ships lying at the wharf, and emptied 342 chests of the obnoxious tea into the harbor. The following year the harbor was entirely closed as a port of entry; and in 1775 began the struggle

Dorchester Heights and the Harbor.

From "Harper's Weekly."

for independence, in which Boston and its vicinity took such a prominent and honorable share. In April the skirmishes at Lexington and Concord took place, rousing the entire country; and June 17 the battle of Bunker Hill was fought at Charlestown, resulting in a repulse of the little American army. That autumn the British soldiers occupied the Old South Church as a riding-school, and in many other ways made themselves particularly disagreeable to the patriotic citizens of the town. The British occupied Boston all the following winter; the army under Washington prosecuting its siege with much perseverance and vigor, so that in March the Americans were victorious, forcing Gen. Howe to evacuate the town, and sail away, carrying with him a thousand Tories.

The evacuation of Boston was the result of a strategic movement of Washington, in taking possession of the bold, rugged hill known as Dorchester Heights, now a part of South Boston, though still retaining its old name among the older residents of the city. Washington confidently expected an attack from Howe, and had prepared a counter stroke. Two divisions under Putnam were to attack the town. Sullivan, with one, was to assault the works on Beacon Hill; Greene, with the other, was to carry the point at Barton's Point, and make a junction with Sullivan. But, as Drake says in his "Old Landmarks of Boston," "Providence arrested the purpose of Howe, and the town was entered without a shot being fired." The work of constructing the fortifications on Dorchester Heights was begun at about eight o'clock on the night of the 4th of March, and when morning dawned the Heights were in condition to afford a good defence against small arms and grape-shot. The works commanded both the harbor and town, and compelled the British either to evacuate the town, or to drive the Americans from their fortifications. The latter course was determined upon; but a furious storm arose, and the design was abandoned, and evacuation took place on March 17, 1776. On July 18 the Declaration of Independence was read from the balcony of the Town House, amid great rejoicings. With varying and oftentimes doubtful prospects of success, the war for independence drew gradually toward its close in 1781. John Hancock was presiding over the destinies of the Commonwealth when the desired consummation of the struggle was reached, and the historic town entered upon a new and brighter era of its existence.

The latter part of the eighteenth century was a period of rapid growth and marked improvement in Boston. The population in 1789 was 18,000. The Charles-river Bridge, the first of the numerous avenues connecting the town with its northern and western suburbs, was completed; and before the close of the century the new State House was finished, and the first two theatres—the Boston, and the Haymarket—opened their doors. During Washington's visit in 1789 he lodged in a mansion-house on the corner of Court and Tremont Streets; which, although altered and one story higher, is still standing. On the Court-street front, between the second and third stories, is a stone tablet, bearing the inscription:—

OCCUPIED BY WASHINGTON, Oct. 1789.
--

Washington Street, during the same year, was named in honor of this visit. Among those who have been occupants of this building are Harrison Gray

Otis, the eminent lawyer, and Daniel Webster, who had his law-office there during his residence in Boston. The upper stories for many years have been almost exclusively occupied by lawyers; and the lower story for the past forty-nine years has been the wholesale and retail grocery of Samuel S. Pierce, now S. S. Pierce & Co. Judge R. I. Burbank began his practice in one of the office-rooms of Webster, and remained an occupant of the building over thirty years.

From the beginning of the nineteenth century, the greater portion of the historical events can be recalled by many persons now living. Our aim shall be briefly to mention some of the most notable.

During the autumn of 1804 a terrific gale visited Boston, blowing down several church-steeple, and doing much damage. The news of the declaration of war against England in 1812 was received by Bostonians with indignation. Her influential men had opposed the embargo laid upon commerce with England, which was a heavy blow to the interests of Boston and Massachusetts, one-third of the shipping of the United States being at that time owned in the State; and they pronounced the war a serious mistake. Nevertheless, at the call for troops a regiment was raised here; and in 1814, when a British fleet was reported to be off the coast, extensive preparations were made to give it a warm reception, should it come this way. Peace was gladly welcomed the next year.

In 1816 Webster came to Boston. He lived first in Mount Vernon Street, on the summit of Beacon Hill, a few rods northwest of the State House; later, in the house now standing at No. 37 Somerset Street; and afterwards at the corner of High and Summer Streets, where he entertained Lafayette in magnificent style during the visit of the latter in 1824.

Washington's Lodgings, Court Street.

Site of Webster's Home, Summer Street.

Webster's residence in Summer Street, now numbered 136 and 138, was long marked by a splendid block of stores, known as "The Webster Buildings." This went down in the great fire of 1872, but was soon replaced by a substantial iron-front building erected as a warehouse for Wm. Claflin, Coburn, & Co., one of the oldest and most prominent boot-manufacturing firms in the United States.

In 1821 the West-Point Cadets, under command of Major Worth, U.S.A., marched to Boston, and encamped on the Common. They were accompanied by the finest band in the country, the music of which was nightly listened to by an admiring multitude; and Willis's strains from a Kent bugle, an instrument then first introduced, were long remembered.

On Feb. 22, 1822, after many years' agitation of the subject, the first petition having been made as early as the year 1709, an act establishing the city of Boston was passed by the legislature, and accepted by the citizens; and May 1, Boston became a city. John Phillips was the first mayor. He was succeeded by Josiah Quincy, who was in office six successive years. The other mayors of Boston, in the order of their service, were: Harrison Gray Otis, three terms; Charles Wells, two; Theodore Lyman, jun., two; Samuel T. Armstrong, one; Samuel A. Eliot, three; Jonathan Chapman, three; Martin Brimmer, two; Thomas A. Davis, one; Josiah Quincy, jun., three; John P. Bigelow, three; Benjamin Seaver, two; Jerome V. C. Smith, two; Alexander H. Rice, two; Frederic W. Lincoln, jun., three; Joseph M. Wight-

man, two; Frederic W. Lincoln, jun., again, four; Otis Norcross, one; Nathaniel B. Shurtleff, three; William Gaston, two; Henry L. Pierce, one; Samuel C. Cobb, three; Frederick O. Prince, one; Henry L. Pierce, one; and F. O. Prince, three (1879-1881).

In 1824 the visit of Lafayette was a notable event. During his sojourn he occupied one part of the double house now standing at the corner of Park and Beacon Streets, the

Lafayette's Lodgings, Beacon Street.

other part afterwards becoming the residence of George Ticknor, the distinguished historian of Spanish literature, and one of the great benefactors of the Boston Public Library. Among the early occupants of this mansion

were Gov. Christopher Gore, in honor of whom the Harvard College Library has been named; Edward G. Malbone, the portrait-painter; Hon. Samuel Dexter, an eminent lawyer and statesman, who had been secretary of war, secretary of the treasury, acting secretary of state, and the first president of the earliest Massachusetts temperance society. Mr. Ticknor was an occupant of the house from 1830 until his death in 1870. It is still occupied by his family.

In 1824 the population of the city was 58,000. During the next few years numerous public improvements were made: among them the opening of the East-Boston and Chelsea ferries; the completion of the Warren Bridge, connecting Charlestown with Boston; the laying of gas-pipes; and the erection of many notable public and private buildings, including a new courthouse, custom-house, and three theatres, the Tremont, Federal, and Warren.

In 1830 the population had grown to 61,000, and the city celebrated the second centenary of its settlement. In 1833 the old hero, Andrew Jackson, visited Boston, and was received with great popular enthusiasm. The Whig party was formed about this time. It was in 1834 that the Ursuline Convent in Charlestown was burned by a mob.

In 1837 a large delegation of the Sacs and Fox Indians arrived from the far West, and, in all the gorgeousness of paint and feathers, exhibited on the Common their war-dances and other feats before interested thousands. Boston suffered, in common with other parts of the country, in the panic of this year, and its banks suspended specie payments; but in good time it recovered, and entered upon another season of prosperity. In 1840 the first steamship-line between Boston and Liverpool was established. In 1843 President Tyler and Gen. Scott visited Boston.

In 1844, after a period of intense cold, the harbor was firmly frozen as far down as the lighthouse; and its surface was enlivened with skating, coasting, sledding, and sleighing. Cargoes were discharged on to teams, and transported to the warehouses. Booths, as on high holidays, filled with eatables and drinkables, added to the gayety of the scene, in one of which was repeated the laughable ruse, which originated at Dedham, to avoid the then stringent liquor law, by placing thereon a placard of "The striped pig on exhibition," and exhibiting him in the form of drinks to suit; and for years "the striped pig" was a synonyme for a glass of liquor. It was during this ice-embargo that the enterprising Boston merchants, aided by the Fresh Pond ice-cutters, cut a channel seven miles long to enable the imprisoned Cunard steamship to prosecute her voyage to England.

In 1847 President Polk was the guest of the city. During this year there was a great fire at the North End, which consumed more than one hundred buildings, with their contents. In 1848 the Cochituate water was introduced, and the event celebrated with an imposing display. In 1849

there was unexampled mortality from Asiatic choléra. In 1850 Professor John W. Webster was hung for the murder of Dr. George Parkman, one of the most extraordinary cases in the history of American crime. The advent of Jenny Lind was a notable event of the same year; the great Swedish vocalist singing to audiences of upwards of 4,000 people. At this period the anti-slavery agitation became intense; and in 1854 the Burns riot occurred, caused by efforts to liberate Anthony Burns, a fugitive slave, one man being killed and several seriously hurt. In 1860 the Prince of Wales with his suite visited Boston.

The opening of the civil war in 1861 found Boston in a state of patriotic ferment. Great out-door war-meetings were held, and recruiting was early begun, and carried on vigorously. During the war the city responded promptly to every call for men or money, and sent into the army and navy 26,119 men, 685 of whom were commissioned officers. In the sanitary work the Boston people, prominently the women, were among the foremost. In 1863 a draft-riot occurred at the North End, but it was soon overcome by the authorities.

Hancock's House, Beacon Street.

In 1863 the old Hancock House, a stone building, one of the noblest private mansions of the colonial period, and one of the unique features of this part of the city, was removed. It stood just beyond the State House,

on Beacon Street, facing the Common. Here Hancock, who was famous as a generous host, entertained the great men of the day in almost princely style. A great effort was made to preserve this old landmark, but without avail, although the house was in excellent preservation. "The chamber of Lafayette remained as when he slept in it; the apartment in which Hancock died was intact; the audience-hall was the same in which Washington, D'Estaing, Brissot, the Percy, and many more had stood; and finally the entrance-hall, in which for eight days the dead patriot lay in state, opened upon the broad staircase as in the time of old Thomas and Lydia Hancock." We quote from Drake. Private residences now occupy the site of the house.

In 1865 the rejoicings over the emancipation proclamation and the end of the war were sharply turned to mourning by the news of the assassination of the beloved President Lincoln. Boston, in common with the other large cities of the North, gave expression to the universal feeling of grief by a funeral procession of vast length. The history of Boston since the war has been crowded with noteworthy events, at which the limits of this sketch allow us the merest glance. In 1867 Gen. Sheridan paid a visit to the city. In the same year Gov. Andrew died suddenly at his city home. In 1868 Gen. Grant visited the city for the first time since the war, and was received with warm demonstrations of welcome. The ensuing year was marked by a grand event, which could only have been carried out by the enterprise of a city like Boston combined with the talent of a man like P. S. Gilmore,—the National Peace Jubilee. It took place from June 15 to 19 in the huge Coliseum, temporarily erected for the purpose between the Back Bay and the South End, and was a remarkable success, drawing thousands of visitors from all sections of the country, and exciting the most unrestrained enthusiasm, both on account of its musical features and of its patriotic tendency. In 1870 Prince Arthur visited Boston. The same year the city was called upon to mourn the death of George Peabody, the philanthropist, and of the Hon. Anson Burlingame, whose remains lay in state in Faneuil Hall. In 1871 the old building standing in the middle of Court Street, near Tremont and Cornhill, known as Scollay's Building, was removed, leaving an open area, now called Scollay Square. This year the Grand Duke Alexis of Russia visited the city, and was treated to a round of brilliant gayeties. The year 1872 was eventful. From June 17 to July 7 the second grand musical festival was held, and was attended by from 30,000 to 100,000 people daily. It also was held in a temporary Coliseum of vast size; and special national musical features were introduced by bands from England, France, Germany, and other countries. Johann Strauss led the orchestra while it played his own waltzes. A grand ball was given, Gen. Grant being present. The enterprise was regarded as a grand success, although it was not remunerative to the shareholders. Dur-

ing the following autumn came the epizootic epidemic, rendering almost all the horses useless for the time being, and causing great inconvenience.

On Nov. 9, this year, at 7.15 o'clock in the evening, the Great Boston Fire broke out. The flames started at the corner of Summer and Kingston Streets, and spread with terrible speed. In spite of the efforts of the firemen, the flames sped north-east and north into the very heart of the substantial business district of the city, where a great proportion of the buildings were of solid granite, and used for wholesale business. Aid was summoned from the suburban and even from distant cities; and special trains bearing fire-engines came hastening into the panic-stricken city from all sides. Buildings were blown up in the hope that the gaps thus left would not be bridged by the furious on-sweeping flames, and the gas was cut off, leaving the city almost in darkness. The militia went on duty to aid the police in preventing the wholesale lawlessness that threatened to add to the terrors of the time. When the fire finally stopped, it had spread over 65 acres, and destroyed about \$80,000,000 worth of property and many lives, leaving the entire district bounded by Summer, Washington, Milk, and Broad Streets a smoking chaos of ruins. Boston recovered with almost incredible elasticity and pluck from this terrible blow; and the "burnt district" is to-day a section of imposing and substantial business warehouses. It must be added, however, that even to the present day the city has not fully recovered from the effects of the great fire. In 1873 another serious fire destroyed several squares of buildings. Subsequent calamities have not been infrequent. Within a few years there have been numbers of those startling and often unaccountable accidents so common in American cities. Among these may be mentioned extensive fires in 1874, 1877, and 1878; the blowing up of a building on the corner of Washington and La Grange Streets; the explosion under the sidewalk near the Federal-street Bridge in South Boston, by which several lives were lost; and the explosion of Jenney's oil establishment in South Boston. The burning of a tenement-house on Shawmut Avenue, in which several of the unfortunate occupants lost their lives or were terribly injured, will be remembered as a comparatively recent occurrence. So also has Boston of late years had an unpleasant notoriety from a peculiar class of criminals: notably the boy Jesse Pomeroy, confined for life in the State prison, who murdered a boy and a girl, and tortured several children, making himself the terror of the neighborhood in which he lived; and Piper, who one Sunday afternoon murdered the little six-year-old girl, Mabel Young, in the belfry of the Warren-avenue Baptist Church, of which he was sexton. According to his confession just before his execution, May 26, 1876, he had also murdered one Bridget Landregan, whose death up to that time had been a mystery, and he had almost fatally assaulted one Mary Tyner on Oxford Street. The Rev. E. D. Winslow, among the foremost of

1. The Clafin Guards, W. B. Sears, Capt. 2. View from Washington Street. 3. The Burnt District.

THE BOSTON FIRE OF 1872.

the long line of prominent and trusted men of Massachusetts who have fallen from their high places to the level of the criminal, was a Boston business-man, managing two daily newspapers, "The Daily News," now out of existence, and "The Boston Post," purchased from its former proprietors a few months before his flight, which occurred on the 19th of January, 1876. He had committed forgeries for very large amounts, by which several of the most prominent banks and many individuals were heavy losers. Winslow was captured in London on the 15th of February; but the British government refused to surrender him unless the United States should guarantee that he should not be tried for any other offence than that set forth in the extradition papers. After long and labored discussion by representatives of both governments, Winslow was released, and soon left London. He was next heard of in South America; and has since flourished in Buenos Ayres, reports coming to his former friends in Boston of his successful speculations and new matrimonial venture. In July, 1878, the so-called "Tappan irregularities" were exposed, creating a great stir for a while in the business world. John G. Tappan, an old citizen, a leading merchant of long standing, was the treasurer of the Boston Belting Company, for many years a most successful and profitable concern, enjoying a large income, especially from the working of valuable patents in its possession. The failure of this company was suddenly announced, coupled with the statement that its treasurer had wrecked it by using its paper and credit to bolster up his own individual speculations, which had been steadily losing. Irregular paper to the extent of several hundred thousand dollars had been given out. Mr. Tappan made over to the company all the property he possessed, in real estate and in bonds and checks, and retired from his position disgraced and ruined. He was the largest of the stockholders, and, with members of his family, held a majority interest. Henry F. Durant, the founder of Wellesley College, was the president of the concern, and was a heavy loser. Upon the surrender of the stock by the original holders, the company was re-organized, and was soon again in successful operation.

In 1874 Charles Sumner died. His early home was the old-fashioned painted brick house, of generous width, now standing at No. 20 Hancock Street. It was purchased by his father in 1830, and was in the possession of the family from that time until 1867, when it was sold to Judge Thomas Russell, collector of the port of Boston, afterward minister to Venezuela, and now a State railroad commissioner. Sumner's law-office was at No. 4 Court Street, at the corner of Washington. Here he was associated for twenty years, beginning in 1834, with George S. Hillard. In the building, during the time of his occupancy, were the offices of a number of eminent members of the Suffolk bar; among them, Theophilus Parsons, Rufus Choate, Horace Mann, Edward G. Loring, Peleg W. Chandler, and, later, John A. Andrew.

The Bunker-hill centennial celebration is something extremely agreeable in the recent history of Boston. Preceded as it was by the celebration of the battles of Lexington and Concord on the 19th of April, 1875, popular enthusiasm had been gradually increasing for weeks before the memorable 17th of June,—the date of one of the grandest demonstrations ever seen in this or any other country. The city, the state, and the private citizens vied with each other in their efforts to make the event a glorious success. The celebration was begun by an official reception in the Music Hall on the evening of June 16, given by the city to its guests, many of whom were from the South. The affair was made memorable especially by the spontaneous expressions of goodwill and of a desire for reconciliation on the part of the late Confederates who participated; and a tone of lofty and heart-felt patriotism pervaded the meeting. The hall was brilliantly decorated, and hundreds of distinguished guests were present, besides military bodies from South Carolina, Virginia, Maryland, New York, and many other States. The speaking was by Mayor Cobb, Gov. Gaston, Col. A. O. Andrews of South Carolina, Gen. Fitz-Hugh Lee of Virginia, Gen. Judson C. Kilpatrick, Gen. W. T. Sherman, Gen. A. E. Burnside, and Vice-President Wilson. The enthusiasm cannot be described, and was entirely unusual in its character. The next morning the city woke up to find its streets filled with vast crowds of visitors; flags floated from almost every building, the streets were gay with banners, and the entire town was in gala array. After a military review in the morning, the great procession started on its long march at 1.15 P.M., under Chief-Marshal Gen. Francis A. Osborn. The procession included the whole militia force of Massachusetts; regiments from New York, Baltimore, Philadelphia, Providence; companies from Pennsylvania, Rhode Island, Connecticut, Virginia, Washington, New York, South Carolina, and New Hampshire; hundreds of governors, generals, and distinguished guests from all parts of the country; civic associations, secret societies, veteran bodies, benevolent and temperance societies, and a trades division in which were 421 vehicles drawn by 1,587 horses. The number of

Sumner's House, Hancock Street.

men marching in the parade has never been approximately estimated, but may be inferred from the fact that the time occupied by the procession in passing a given point (all delays being deducted) was three hours and fifty minutes. The railroads alone brought 140,000 people into the city on that day. Exercises at the Bunker-hill Monument in the afternoon were presided over by Judge G. W. Warren; and the oration was delivered by Gen. Charles Devens, jun.

On March 17, following this memorable celebration, the one hundredth anniversary of the evacuation of Boston by the British was observed in a somewhat elaborate fashion. Historic points and buildings were noted and decorated, speeches were made in the Old South Church, and an oration was delivered in Music Hall.

Jan. 25, 1877, the Moody and Sankey Tabernacle, a large brick building, well constructed, though built for a temporary purpose, and capable of seating 6,000 persons, situated at the junction of Tremont Street and Warren Avenue, was dedicated; and on the 28th began the season of daily revival meetings that continued without interruption until May 27. Dwight L. Moody preached and held prayer-meetings daily, both afternoon and evening, with few exceptions; and Ira D. Sankey sang, supported by a vast choir under the direction of Eben Tourjée. Great crowds were attracted, not only from the city, but from the surrounding country, excursion trains running on the railroads. The meetings created a profound sensation. On March 9 of this year there was one of the severest gales ever known in this vicinity. The velocity of the wind was seventy-two miles an hour. The storm area was of great extent, striking the whole Atlantic seaboard, and extending west beyond the Mississippi. On the evening of April 9 the social event of the season occurred,—the Old South Ball, in aid of the preservation fund, which was given in Music Hall. June 26–27 President Hayes, with Evarts, Sherman, Key, and Devens, of his Cabinet, visited the city. There was a procession and review in their honor, and a civic banquet at the Hotel Brunswick. The President attended Commencement at Harvard, and the degree of LL.D. was conferred upon him. A few days previous to the visit of the President, a delegation of ladies of the Woman's Christian Temperance Union, headed by Mrs. M. A. Livermore, presented a memorial to Mayor Prince praying for the banishment of liquor from the forthcoming city dinner to the Presidential party. There was a free interchange of views, Mayor Prince earnestly debating the question with Mrs. Livermore. Liquor, however, was not banished from the festive board. On Sept. 17, on the occasion of the dedication of the Army and Navy Monument, there was a great procession, the military feature being the most conspicuous. The entire militia of the State was in line, the principal posts of the Grand Army of the Republic, and many distinguished veterans of the war of the

Rebellion. There was also a large representation of civic organizations, and children of the public schools. Gen. Devens was the orator of the day. On Sept. 19 Gen. McClellan was given a reception in Faneuil Hall.

The first place of business in this country to make use of the electric light was the Continental Clothing House, at the south-west corner of Washington and Harvard Streets; the proprietors, Freeland, Loomis, & Co., successfully making the experiment Nov. 14, 1878. In 1881 the light was introduced in illuminating Scollay Square and a section of Court Street at night; and it was also employed in a number of hotels, shops, and large establishments. The project of its general introduction in the street-lighting of the city was considerably discussed.

An impressive ceremony took place on the 28th of May, 1879, when the funeral rites of William Lloyd Garrison, one of Boston's most illustrious citizens, were performed. The services took place in the church in Eliot Square, Roxbury district, and comprised an eloquent oration by Wendell Phillips, and addresses by Lucy Stone, Theodore D. Weld, and the Revs. Samuel May and Samuel Johnson. A fitting poetical tribute was paid by John G. Whittier, and music was appropriately furnished by a quartet of colored people.

On the third day of December, 1879, a notable gathering took place at the Hotel Brunswick. It was a "breakfast" given by the proprietors of "The Atlantic Monthly" in honor of Oliver Wendell Holmes, who a short time previous, Aug. 29, had attained his seventieth birthday. The gathering included many of the representative literary men and women of this country. The seventieth birthday of Whittier was celebrated in a similar way two years before.

Anniversary celebrations of important dates are numerous, and no people take greater pride in recalling noteworthy events and illustrious people than do the Bostonians. It is peculiarly fitting, therefore, that the citizens should enthusiastically celebrate the 250th anniversary of the settlement of their own famous city. Accordingly on Sept. 17, 1880, after several months' preparation, a celebration took place that will be vividly remembered for many years. The day was "one of the most favorable that Providence ever granted for an out-door display,—one of the pearls of our New-England climate." From early in the morning till past midnight the city was all aglow; a new statue of Gov. John Winthrop, its founder, erected in Scollay Square, was unveiled; there were exercises in the Old South Church, including an historical oration by Mayor Prince; a civic, military, and trades procession; and an evening procession with illuminated tableaux. Here as well as elsewhere, appropriate services took place on the one hundredth anniversary, June 27, 1880, of the establishment of Sunday schools, and the five hundredth of the translation of the Bible into the English language.

Boston sustained another serious loss by fire, when, on the 28th of December, 1879, the warehouses of Houghton, Osgood, & Co., publishers, Samuel D. Warren & Co. and Rice, Kendall, & Co., paper-manufacturers, Rand, Avery, & Co., printers, and several kindred concerns, were destroyed. The loss sustained amounted to upwards of \$800,000.

Of old Boston, a hundred years ago, the following pleasing sketch is condensed from the address of the Rev. Dr. George E. Ellis, on the occasion of the celebration of the hundredth anniversary of the evacuation of Boston by the British: "‘Well-to-do,’ ‘fore-handed,’ were the local phrases by which the general condition of the people would have been described. There was real wealth, too, in the hands of some, with complacency, luxury, and display. There were stately and substantial dwellings, with rich and solid furnishings for parlor, dining-room, hall, and chamber, with plate and tapestry, brocades and laces. There were portraits, by foreign and resident artists, of those who were ancestors, and those who meant to be ancestors. There were formal costumes and manners for the gentry, with parade and etiquette, a self-respecting decorum in intercourse with their own and other classes, warm hospitality, good appetites, and abundant viands, liquid and solid, for all. The buildings were detached, none of them in blocks. The homes of many of the merchant-princes and high magistrates were relatively more palatial than are any in the city to-day. They stood conspicuous and large, surrounded by generous spaces, with lawns and trees, with fruit and vegetable gardens, and fields for pasture, and coach and cattle barns. There were fine equipages, with black coachmen and footmen. There were still wide unfenced spaces, and declivities and thickets, where the barberry-bush, the flag, and the mullein-stalk grew undisturbed. There were many quaint old nooks and corners, taverns and inns, ‘coffee-houses,’ — the drinking-vessels in which were not especially adapted to that beverage, — shops designated by emblems and symbols, loitering-places for news and gossip, resorts of boys and negroes for play or roguery, and some dark holes on wharf or lane. . . . There were some two thousand buildings, four being of stone, of which King’s Chapel alone remains. Between Beacon and the foot of Park Street stood the workhouse, the poorhouse, and the Bridewell, — all facing the Common. On the site of the Park-street Church stood the Granary; opposite, a large manufactory building, used by the British for a hospital. The jail occupied the site of the present Court-house. King and Queen, now State and Court Streets, were the most compactly covered, and lined with taverns, dwellings, marts, and offices of exchange. The house provided by the Province for the British governor was opposite the Old South, standing far back, stately, commodious, with trees and lawn up to Washington Street. The Old State House, with a dignity which it has not now, held the halls of the council and the repre-

sentatives, with royal portraits and adornings. How little is there here now which the patriots and citizens of the old days, if they came back, would recognize!"

Such was Boston a hundred years ago. A great, far-reaching, imposing modern city has taken the place of the bustling, quaint, picturesque town of that day. Even during the past half-century Boston has changed marvelously in appearance, customs, and manners. Few of the historic old landmarks remain, and these few are evidently doomed soon to disappear before the onward march of the utilitarian. It has lost much of its homely quaintness; but with this loss it has gained greatly in other directions. To the older citizen much of its charm has gone forever, and in many parts it has to him an unfamiliar look. Its odd old streets, so incomprehensible to the stranger, have been untwisted and untangled, widened and straightened, and cut away, and their peculiar characteristics almost entirely effaced. A new and modern architecture in its buildings has largely superseded the old, and radical changes have been made in every direction. Picturesque and attractive in many ways as was old Boston, the new Boston, with its wealth of magnificent buildings in the busy, bustling "down-town" section, its rows of elegant and costly residences in the Back Bay and other districts, its countless refined homes, its artistic adornments, and its many stately structures, public and private, is a most attractive modern city, frankly accorded to be—even by those of other places proud of their own cities—the finest in the country. The Boston of to-day is a city well finished and well furnished, richly, and to a large degree tastefully, adorned; but the work of improvement and change is perceptibly going on.

Up to the beginning of the last half-century the territorial area and aspect of the city had changed but little. It was then a pear-shaped peninsula, in its extreme length less than two miles, and its greatest breadth a little more than one. "It hung to the mainland at Roxbury," says one writer, "by a slender stem, or neck, of a mile in length, so low and narrow between tide-washed flats that it was often submerged." But now the original 783 acres of solid land have become 1,829. The broad, oozy salt-marshes, the estuaries, coverts, and bays, once stretching wide on its northern and southern bounds, have been reclaimed; and where then the area was the narrowest, it is now the widest. The hills have been cut down,—one, Fort Hill, entirely removed; the whole surface of the original ground has been levelled and graded, and every square inch turned over and over; new territory has been added by annexing adjoining suburban cities and towns, until now the area of the city, with all its districts, is 23,661 acres ($36\frac{7}{10}$ square miles), more than thirty times as great as the original area. The area of the districts is as follows: South Boston, 1,002 acres; East Boston, 836; Roxbury, 2,700; Dorchester, 5,614; West Roxbury, 7,848; Brighton, 2,277; Charlestown, 586; Breed's Island, 785; Deer Island, 184.

From 1800 to 1880, when the last census was taken, the population increased from 25,000 to 362,839; the number of polls during the same period, from 4,543 to 93,820; the total valuation, from \$15,095,700 to \$639,462,495; the tax levy, of less than \$80,000 to \$9,913,951.13. The city debt is heavy, but with its present means and accumulations the city can pay at maturity all its indebtedness. The total debt of all descriptions April 30, 1881, when the last statement was made, was \$40,949,332.18, against \$42,030,125.36 the year preceding. This debt is classified as follows: city debt proper, \$24,922,558.20; Cochituate-water loans, \$11,631,273.98; war debt (loans outstanding), \$1,645,500; Roxbury debt (loans outstanding), \$180,000; Dorchester debt (loans outstanding), \$15,000; Charlestown debt (loans outstanding), \$1,060,000; Charlestown Mystic-water debt (loans outstanding), \$1,153,000; Brighton debt (loans outstanding), \$50,000; West-Roxbury debt (loans outstanding), \$292,000. The sinking-funds pledged to meet the debt amount to \$14,943,711.59. In the year 1880-81, \$1,080,793.18 of the funded debt was paid and cancelled. Roxbury's valuation when annexed to Boston, in 1867, was \$26,551,700; Dorchester's when annexed, in 1869, was \$20,315,700; Charlestown's when annexed, in 1873, \$35,289,682; West Roxbury's when annexed, same year, \$22,148,600; and Brighton's when annexed, same year, \$14,548,531. Within twelve miles of the City Hall, there is a population of about 625,000. The comparison of the population of Boston and its suburbs, five cities and fifteen towns, shows a population, in 1880, of 571,258,—a gain of 42,180 since the State census of 1875, and an increase of 126,203 as compared with the United-States census of 1870. More than one-half of the increase during the past ten years has been within the present limits of this city. Of Boston of the present day, beyond the brief glimpse given in this opening chapter, the following pages will be found to present, we trust, an interesting picture.

The Arteries of the City.

THE STREETS, WAYS, DRIVES, BRIDGES, SEWERS, AND
HORSE-RAILROADS.

MANY streets in old Boston had been named for London streets, and ways and places in other parts of old England; but after the Revolution the citizens made haste to change the most obnoxious of these names for others of a more republican flavor. Thus King Street was promptly changed to State Street, and Queen to Court. Richmond Street before 1708 was called Beer Lane, from Beer Lane in London; and Salem Street prior to the same date was called Back Street. The name of Hanover Street was not changed, though a "perpetual reminder of a detested house;" and until 1854 the tough old street now North was called Ann, in honor of Queen Anne. The portion of Congress Street south of Milk Street before 1855 was Atkinson Street, named from the ancient Atkinson family, who came from Lancashire. Federal Street before 1788 was Long Lane. Dock Square was so named because it was "the place around the dock." Milk and Cornhill were named from streets of the same names in London; and in both the old and the present Cornhill, for years was the headquarters of the book-trade. Franklin Avenue, the narrow way which now runs from Cornhill to Court, was so named for the reason that in a printing-office standing at the Court-street corner Franklin served his apprenticeship. Hawley Street was formerly Bishop's Alley, and afterwards, until 1792, Broad Alley. Boylston Street was anciently Frog Lane; and Devonshire Street was, up to the close of the Revolution, Pudding Lane, from the street of the same name in London. Bowdoin Street and Square were named for the governor. Bowdoin Square was the seat of many elegant old-time estates, with broad acres, gardens, and noble trees. Chardon Street was named for Peter Chardon, an eminent merchant, one of the Huguenot descendants, who lived on the corner where the Bowdoin-square Church now stands. Leverett Street is from the famous old Governor John. Causeway Street was named for the old causeway built on substantially its present line, and which made a pond of many acres between Prince and Pitts Streets. The first block of brick buildings erected in the town was built as late as 1793, in what is now Franklin Street. Broad Street was laid out in 1806, at the generous width of seventy feet; and India Street was opened the year following. Blackstone Street, named after the first settler of Boston, was opened about 1834, and

was built upon the bed of the old Middlesex Canal, by which boats came down from Chelmsford on the Merrimack to the wharves on the east side of Boston. Harrison Avenue was opened in 1841, and was named in honor of Gen. Harrison. Beacon Street was named, of course, for Beacon Hill; and when the name was confirmed by the town, the street extended only to the present State-house grounds. The street, now one of the most "toney" in the city, was first called "the lane to the almshouse!" Province Court and Street, from School to Bromfield, in the rear of Washington, were originally avenues to the stables and the rear grounds of the old Province House, the ancient abode of the royal governors, and one of the last relics of the colony to disappear. Hence their names. The stately building fronted on that part of Washington Street formerly known as Marlborough, nearly opposite the head of Milk Street, with a handsome lawn in front ornamented by two stately oaks. From the balcony over the generous entrance, the viceroys of the province were accustomed to harangue the people, or read proclamations. After the adoption of the State Constitution it became a government house, and was for a while the official residence of the governors. Later it was sold, converted to the uses of trade, and fell from its proud position in colonial times, dropping lower and lower in the social scale, becoming a tavern, and last a hall of negro minstrelsy. It was destroyed by fire in October, 1864. The Province House formed the theme of one of Hawthorne's weird and fascinating fancies in his "Twice-Told Tales."

The streets of the business portion of Boston, which embraces almost all of old Boston, have long been pronounced a hopeless tangle by those unfamiliar with their tortuous courses, and their tendency to run into and across each other; but in consequence of much changing, widening, and straightening, at a heavy expense to the city, many of the crooked ways have been made comparatively straight, though it must be confessed that many yet remain greatly to perplex the stranger, and even the born Bostonian in his endeavor to direct a bewildered inquirer. But these very crooked and twisting streets are one of the peculiar charms of Boston, and add much to its picturesque appearance. The new streets are spacious, direct, and straightforward enough to suit even the square-cut Philadelphian. Washington Street, first called Broadway, then Broad Street, and often simply the Way, has always been one of the main thoroughfares. At first it extended from near Dover Street to the Roxbury line; but in 1824 the names of the down-town twists of the present street, up to that time known as Cornhill, Marlborough, Newbury, and Orange, were all changed to Washington. In 1873-4, at a cost of over \$1,500,000, it was extended farther down to Haymarket Square, whence it now runs to the Highlands, as the former city of Roxbury, now a part of Boston, is popularly called. Tremont, one of the principal retail streets, is of course a contraction of Trimountaine.

HOOSAC TUNNEL ROUTE.

SOUTH
BAY

N. CHANDLER, ENG.

In 1805 there was but one brick house on this street. Winter Street, formerly Bolt's Lane, is familiarly called the "Ladies' Street," because the stores upon it are exclusively for ladies' trade, and crowds of ladies throng it pleasant days. Other principal retail streets are Temple Place; West Street; Tremont Row, which forms one side of Court Street north of Pemberton Square; and Hanover Street, which a quarter of a century ago was the leading retail street. State Street, flanked with granite buildings, is the principal financial street. The leather trade is chiefly centred, as before the great fire of 1872, in Pearl, Congress, Summer, High, and neighboring streets; the cotton and wool houses are in the same section of the city; the wholesale dry-goods jobbing-houses are on Franklin, Summer, Arch, and near-by streets; Broad and India are notable wholesale streets; and the shipping interests, with the corn and grain trade, are found largely represented on Commercial and the streets in its immediate vicinity, where are long blocks of massive granite warehouses. Running parallel with Washington Street, up town, are Harrison Avenue and Albany Street on the east; and Shawmut Avenue, Tremont Street, Columbus Avenue, and Huntington Avenue, on the west. One of the most fashionable carriage-drives is through Beacon Street, over Beacon Hill, along by the Common, Public Garden, and a continuous line of elegant residences, and out through Commonwealth Avenue or Beacon Street, or the Mill Dam as the latter is more commonly called, to Longwood and Brookline, attractive suburbs; the former being not unlike a scene from old English country life. The Mill Dam, when established, was considered an enterprise of great magnitude. The dam extends across the western bay, about a mile and a half in length, and seventy feet in width. It originally enclosed about six hundred acres of flats, over which the tide flowed from seven to ten feet deep. A partition dam divided this enclosure, and formed, by the aid of flood and ebb gates, a fall and a receiving basin, thereby exerting a vast hydraulic power for the propulsion of machinery. This cross-dam also formed a fine avenue from the Mill Dam to Roxbury. The Mill Dam begun in 1818, completed in 1821, at a cost of \$700,000, was until recently used as a popular mile-track for speeding horses, and in the sleighing-season the scenes presented were animating and enlivening in the extreme. The roadway continues into the famous Brighton Road, familiar to all "horsemen," to which locality the racing has been more recently transferred.

Running from Arlington Street, the western border of the Public Garden, and parallel with Beacon Street, are Commonwealth Avenue, Newbury, Marlborough, and Boylston Streets. Parallel with Arlington Street are Berkeley, Clarendon, Dartmouth, Exeter, Fairfield, Gloucester, and Hereford, ingeniously named, it will be observed, according to the letters of the alphabet, and a trisyllabic alternating with a dissyllabic word. This is the

grand Back-bay section, the fashionable modern West End of Boston. These broad and handsome streets are lined with imposing and stately private and public edifices, the architectural designs of which, in many cases, are most ambitious and elaborate, rendering this part of the city justly famous. Indeed, its refined elegance is always remarked with genuine enthusiasm by visitors; for no other city in this country, nor possibly in any other, displays, in a like space of territory, so much solid wealth, and so many superb structures, public and private, as are here spread before the eye. The educated and thoroughly trained architect has here had full swing, with money, and men of artistic sense, behind him. Bostonians are proud of this section of their city; and their pride is surely pardonable. This

Arlington Street, opposite the Public Garden.

Back-bay territory is made-land, over flats which were originally the property of the Commonwealth, by whom the filling-in was largely done, at a cost of less than \$1,750,000; and thus far the State treasury has received over \$4,625,000 by the sale of these lands, and something more than 250,000 feet are yet unsold. The Boston Water-Power Company, a private corporation, also filled in many thousand feet in this section, realizing handsomely for it.

The contractor for filling in and making salable this whole section was Norman C. Munson, who began and carried on the work in spite of bitter opposition, and under very many discouraging circumstances. He derived as his payment for the first work on the Back Bay 260,000 square feet of the upwards of a million square feet of the land he had

redeemed from unsightly flats, salt marshes, and dreary waste of water; and by continuous contracts extending over a period of twenty years he ultimately received about seven million dollars for his work on the Back-bay District. For forty years Mr. Munson has been a bold railroad contractor; his last task being the Massachusetts Central Railroad.

Commonwealth Avenue is destined to become one of the famous boulevards of the world. It begins on the Arlington-street side of the Public Garden, and enters the new Back-bay Park. Its width is 250 feet from house to house, 175 feet from curb to curb; and throughout its length, of upwards of a mile and a half, there is in the centre a mall or park, along which are rows of ornamental trees, prettily-laid-out paths, benches, and several statues. The strip of park was first enclosed with an iron railing; but in 1880 and 1881 it was removed, and as a result the avenue is much more picturesque. On Commonwealth Avenue, at the corner of Dartmouth Street, was built in 1880 Col. Wolcott's palatial hotel, the Vendome. On the avenue are the statues of Alexander Hamilton and Gen. John Glover; and the Brattle-square Church, with its finely-sculptured tower. Both sides of the avenue are lined with costly and architecturally beautiful residences, so that looking up or down by day, when the stately lines of buildings and several rows of trees can be seen for a distance of a mile or more, or by night when the avenue is lighted by four continuous rows of gas-lamps, you will see one of the most attractive thoroughfares in this country or in Europe. Work on the extension of the avenue, through the proposed Back-bay Park to Brookline Avenue, is now progressing. Work has been begun on the construction of a handsome bridge on the extension over the park water-way. Huntington Avenue, too, in the newer portion of Back-bay District, is destined to be one of the principal ways, and is to be adorned according to generous and attractive plans. On this avenue were erected in 1881 the extensive permanent exhibition buildings of the Massachusetts Charitable Mechanics' and the New-England Manufacturers' and Mechanics' Associations.

"West Chester Park" is not a park, but a street, ninety feet wide, which crosses Commonwealth Avenue, five blocks west of the Hotel Vendome. It was laid out in 1873, and is a pleasant street, with as yet only a few houses on the part that runs through the new-made land of the Back Bay. It begins at Charles River, and, varying its direction at Falmouth Street, runs across the city. Between Tremont Street and Shawmut Avenue it broadens into Chester Square, a modest park of one and a third acres. East of Washington Street it is called Chester Park. From West Chester Park a bridge is to be built to Cambridge, in the vicinity of the old Fort Washington, on Putnam Avenue. This will afford a direct and very pleasant route between Harvard College and Boston. At the "South End," Chester

COMMONWEALTH AVENUE,

Showing the Brattle-Square Church and the Hotel Vendome.

Park and Union Park are fine residence streets ; and likewise, besides many others, are Newton, Rutland, Concord, and Worcester Streets, which open upon beautiful squares.

One of the most extensive and noteworthy street improvements was the laying out of Atlantic Avenue, at a cost of \$2,404,078. This is a broad and spacious thoroughfare, one hundred feet wide, along the harbor line, at the head of the principal wharves, running from the junction of Commercial Street and Eastern Avenue to Federal Street. The total cost of the Fort-Hill improvement—the levelling of the hill and the laying-out of streets—was \$1,575,000.

In South Boston the street-system is quite regular. Dorchester Avenue runs directly south from Federal Street in the city proper, through Dorchester, to Milton Lower Mills. Broadway runs centrally through the territory to City Point, and is the principal thoroughfare; the cross-streets are lettered, and many of the streets running parallel with Broadway are numbered. Dorchester Street crosses Broadway at the centre; and all streets west of it have the prefix West, and those east have the prefix East.

In East Boston the principal thoroughfares are Meridian Street, running north and south, and Chelsea Street. Both are intersected by many other streets, running for the most part in direct lines across the island. Webster Street commands a fine view of Boston Harbor and the city proper, and has the most noteworthy private residences of the Island ward. The streets are named chiefly for Revolutionary battles or noted poets and artists.

In the Charlestown district the principal avenues are Main Street, running its entire length to "The Charlestown Neck;" Bunker-hill Street, running over Bunker Hill, parallel with Main Street; and Chelsea Street, extending from Warren to Chelsea Bridges. The best residences are on Monument Square, Breed's Hill, and the streets leading directly therefrom. City Square is in the southern section of the district.

The streets in the Highland district are broad and remarkably attractive, winding over the rocky and uneven surface, many of them adorned by luxuriant shade-trees, and lined with comfortable, well-built, and often elegant residences; the Highlands being sought by those "well-to-do" citizens who desire to establish their homes not too far from "down-town," and where the advantages of both city and country can be agreeably combined. Warren Street, leading to Dorchester, and Walnut Avenue, are the principal driveways through the Highlands. A great deal of taste and skill are displayed by many residents along these streets, on Norfolk Hill, and other sections, in horticultural as well as architectural embellishments.

The Dorchester district presents many interesting features. It is quite rural; and some of its minor streets lead into most delightful lanes, which are much enjoyed by the pedestrian. Here also are fine country resi-

dences, with grounds made beautiful by the skill of the landscape-gardener; and pretty villas, — especially at Savin Hill, a picturesque eminence, with water on three sides, and commanding a superb view. Washington Street and Dorchester Avenue, Bowdoin, Hancock, and Boston Streets, are the principal thoroughfares through this district.

The streets of the West-Roxbury district are chiefly pleasant country driveways, alongside beautiful gardens, ornamental trees, elegant estates, and delightful villas. It includes Jamaica Plain, noted for its handsome private estates and public buildings; and Jamaica Pond, a most beautiful sheet of water, the ride around which is considered one of the most pleasant drives about Boston.

The Brighton district is reached by Beacon Street, over the Brighton Road. Its streets are pleasant and shady; those towards the south and west passing over beautiful hills commanding delightful views. The principal drives are to and about the Chestnut-hill Reservoir, a distance of $5\frac{1}{2}$ miles from the City Hall.

The total cost to the city of street widenings, improvements, and new streets, from the incorporation of the city in 1822, until April 30, 1881, was \$32,790,110. The total length of the public streets is about 404 miles.

The Bridges in and around Boston are quite numerous. Connecting the original city with the Charlestown district, there are two bridges, — the Charles-river and Warren Bridges. The Charles-river Bridge was the first bridge in Boston, and was opened to the public June 17, 1786. It was considered at the time one of the greatest enterprises ever undertaken in America. It was 1,503 feet long, and cost \$50,000. It has been rebuilt and considerably enlarged. The Warren Bridge, 1,390 feet long, was completed in 1828. West-Boston or Cambridge Bridge, connecting Cambridge with Boston, was opened Nov. 23, 1793. The first bridge was 2,758 feet long, with an abutment and causeway 3,432 feet long, making a total length of 6,190 feet; and its cost was \$76,667. This also has been rebuilt and enlarged. East Cambridge is connected by Cragie's Bridge, formerly called Canal Bridge, 2,796 feet in length, which was opened in 1809. A lateral bridge extends from this to Prison Point, Charlestown district, 1,820 feet in length. The first bridge to South Boston was from the "Neck" at Dover Street, 1,550 feet long. It cost \$50,000, and was opened in 1805. A second bridge, at the foot of Federal Street, 500 feet long, was completed in 1828. The old Dover-street Bridge has been replaced by a spacious and substantial structure; and a magnificent iron structure, known as the Broadway Bridge, was completed in 1872. There are also the Mount Washington Avenue, and the Congress-street Bridges, over Fort-Point Channel. East Boston is connected with the city proper by three ferries. Two bridges connect East Boston and Chelsea, — the Chelsea-street Bridge and the Meridian-street Bridge.

In the Charlestown district is a long bridge to Chelsea, which has recently been rebuilt; and from near Charlestown Neck, a long bridge to Everett, formerly South Malden. In the Back-bay district of the city proper, are several fine bridges over the railroads, built at much expense. Saratoga-street bridge extends to Breed's Island, a part of East Boston, in Ward I., and leads also to Winthrop. Six bridges connect the Brighton district with Watertown and Cambridge, and four bridges connect the Dorchester district with Milton and Quincy.

The Public Sewers in Boston are 191 $\frac{3}{4}$ miles in length. In 1880-81 the sewer department expended \$134,000, and built five miles of sewers and 149 new catch-basins. In August, 1877, the city council authorized the construction of an improved and elaborate system of sewerage at a cost of \$3,713,000. The contracts were awarded, and work at once begun. It will probably be finished in 1882. The scheme involves the construction of some 13 miles of intercepting sewers, a pumping-station and pumps, a reservoir, and a tunnel under Dorchester Bay. The pumping-station is to be located at Old Harbor Point, and its outlet at Moon Head, in Boston Harbor, by which it is expected the sewage will be swept far out to sea.

The Street-Railway System in Boston, although controlled by a few companies, is nevertheless quite extensive and admirably conducted. The lively competition of the various companies causes each one to put forward the best accommodations that can be given. The cars are generally first-class, and many may justly be called palace-cars. Almost every part of the city and its vicinity can be reached by a ride in the street-cars. They are always to be found at every railroad depot and almost every steamboat wharf; and the economical traveller can always be sure of transportation from his place of arrival to his place of destination, if not by one direct ride, at most by one transfer. Nearly 153 miles of track are operated by the various corporations mentioned below.

The Metropolitan Railroad Company is the oldest of the eight companies that own the street-railways of Boston, and it operates the most extensive line. The wages alone amount to over \$500,000 per annum. Its capital stock is \$1,500,000. Although incorporated in 1853, the company run no cars over its tracks until 1856; and then the object was only to accommodate travel between the present Scollay Square and the South End and Roxbury. Lines of omnibuses, known as "King's" and "Hathorne's," were in existence, and were purchased and run for a long time by this company. Its cars run to different sections of the city proper and East Boston, and by way of Washington and Tremont Streets to the Highlands, Dorchester, Milton Lower Mills, Forest Hills, Jamaica Plain, and Brookline.

The Highland Street-Railway Company, organized in 1872, is a competitor with the Metropolitan road. Its paid-up capital stock is \$600,000.

Its route extends to the Highlands *via* Shawmut and Columbus Avenues, to Grove Hall in one direction and Mount Pleasant in another.

The **Union Railway Company** operates lines running to Harvard College, Mount-Auburn Cemetery, and other parts of Cambridge, the Brighton district, Arlington, Watertown, and Somerville. Its Boston terminus is Bowdoin Square. The paid-up capital stock of the corporation is \$500,000.

The **Middlesex Railroad Company** operates lines running through the streets of Boston, from the Old Colony and Boston and Albany Railroad Depots to the Charlestown district; to Union Square, and to Winter Hill, Somerville; to Everett and to Malden. Its capital stock is \$550,000.

The **South-Boston Railroad** has a capital stock of \$600,000, and its cars run chiefly to South Boston.

The **Lynn and Boston Railroad** runs lines to Chelsea, to Revere (including Revere Beach in summer), to Saugus, Lynn, and Swampscott. Its capital stock is \$200,000.

The **Railroad Commissioners** of the Commonwealth of Massachusetts are Thomas Russell, Edward W. Kinsley, and Clemens Herschel. From the report of the commissioners, dated January, 1881, are compiled the following statistics about the Boston street-railroads:—

Name of Company.	Miles of Track. ¹	No. of Passengers carried in 1880.	No. of Horses.	No. of Cars.	No. of Men employed.	Dividends, 1880.	Total Investments.
Metropolitan	65	26,953,574	2,631	496	1,289	8%	\$3,278,720.37
Highland	14	8,049,276	717	133	285	8%	949,332.32
Union ²	—	10,814,966	1,140	172	408	10%	618,439.77
Middlesex	12	5,577,061	485	97	210	7%	821,975.07
South Boston	11	7,683,110	652	142	326	6%	715,729.57
Lynn and Boston	14	3,216,802	290	63	122	—	299,676.23
Cambridge ²	34	—	—	—	—	9%	908,600.00
Arlington ²	2	—	—	—	—	6%	13,600.00

¹ Total length in even miles.

² The Cambridge and Arlington roads are operated by the Union Railway Company.

The **Elevated Railroad System** may in time gain a foothold in Boston. In the autumn of 1878 the first petitions for charters were filed for the Legislature by two different associations, the Boston Elevated Railroad Company and the Metropolitan Elevated Railroad Company. Since then several more petitions have been filed and heard, but the petitioners failed to secure charters.

The Arms of the City.

THE RAILROADS, STEAMSHIPS, SHIPPING, AND WHARVES OF BOSTON.

THE steam-railroad was introduced in Massachusetts at a time when the commercial interests of Boston were suffering from the results of improvements and enterprises directly in the interest of New-York City, and when the far-sighted citizens of Boston were greatly concerned, if not alarmed, for her future as a commercial centre. While Boston had poor and slow facilities for reaching distant points except by sea, New York, by her steamers making daily voyages to Providence, to the Connecticut River, to New Haven, and to ports on the Hudson lying near the western border of Massachusetts, had direct and regular intercourse with about half the State of Massachusetts. By way of the Blackstone Canal from Providence to Worcester she reached the heart of the Commonwealth, while Boston had no such communication with Worcester; and by way of a canal from Northampton to New Haven she had largely drawn to herself the trade of the Connecticut Valley. The costly Middlesex Canal, leading from Boston north almost to the New-Hampshire line, and modest improvements in the construction of locks for fostering a very limited traffic by flat-boats on the Merrimack and the Connecticut Rivers, had disappointed public expectation; and Boston's chief system of internal communication consisted of numerous lines of stage-coaches and baggage-wagons; the former capable of making a journey of 100 miles in a day of eighteen hours, and the latter making the round trip of 100 miles and back, once a fortnight, with a carrying capacity of only four or five tons. Such were the rapid modes of travel and transportation out from Boston, when the practicability of the railroad was discovered and demonstrated in England; and, as soon as learned of and fully comprehended here, its introduction into Massachusetts was promptly urged and pressed by the most energetic and public-spirited men of Boston, as the solution of the problem of internal improvement by which successful competition with New York, and the enlargement of the business and trade of the city, could best be secured. A scheme which had long been agitated for the establishment of a canal from Boston to Worcester, for the purpose of counteracting the Blackstone, and another for opening a line of navigation by way of Miller's River to the Connecticut, and thence by tunnelling the Hoosac Mountain to the Hudson, were

abandoned, by some who had been among their most ardent advocates, and their energies directed towards securing the railroad. It must be confessed, however, that men of capital sufficient to test the experiment on a broad and generous scale were slow to recognize its advantages; and the public received the announcement of this improvement as adapted to meet its wants with what, at this day, appears as surprising incredulity.

At length, after much discussion in the newspapers, pamphlets, and public meetings, the legislature in 1827 was influenced to authorize a commission to cause surveys to be made of the most practicable routes for a railroad from Boston to the Hudson River at or near Albany. The next legislature, upon the report of these commissioners, established a board of directors of internal improvement, consisting of twelve members, and appropriated a fund to pay the expenses of surveys and plans; and under their direction surveys were made for a railroad from Boston to the Hudson River, and for three entire routes from Boston to Providence. The board reported in the winter of 1829, recommending that a commencement of railroads be made in both directions, — to the Hudson River and to Providence, — at the expense of the State. But the legislature declined to make any appropriation. In succeeding sessions several private charters were granted; but nothing was accomplished by these at once, the subscriptions to stock coming forward slowly. In 1831 the Boston and Providence, the Boston and Worcester, and the Boston and Lowell corporations were organized, the charter of the latter having been granted the year before; and the construction of all three roads was begun the following year. The subscriptions to the stock of the Boston and Worcester road were made conditionally, with the reservation of the right of the subscribers to withdraw on receiving the report of definite surveys and estimates; and were mostly by business men desirous of establishing, ultimately, a western railroad which should extend to the Hudson River. A great part of the stock of the Boston and Providence was taken by New-York capitalists, and much of that of the Boston and Lowell by stockholders in the mills of Lowell. The Boston and Worcester was partially opened for public travel in April, 1834, and opened throughout on July 4, the following year; the Boston and Providence in part in June, 1834, and throughout in June, 1835; and the Boston and Lowell in June, 1835. These roads were built by engineers who had never seen the English works; and, though they adopted the general principles on which those were built, they by no means directly copied them, making in some particulars radical changes, as, for instance, adopting cross-ties of wood in lieu of stone blocks, as "sleepers," and admitting higher grades. The Boston and Lowell, however, did lay their track in part on granite sleepers. At first the locomotives were imported from England; but very soon works for their manufacture were established here, a locomotive of

American make being placed on the Worcester road within its first year, proving a valuable and altogether serviceable engine.

Once firmly established, the great advantage of the railroad over the canal and other modes of transportation and travel of that day was recognized by all; and the system was rapidly enlarged and extended, through the indomitable enterprise of citizens of Boston, until in 1851 seven trunk-lines, extending to the limits of the State, had been completed, with numerous branches, connecting with main lines in and passing through other States, opening channels of easy intercourse with distant parts of the country in all directions; the last trunk-line finished connecting the St. Lawrence at its two most important points, Ogdensburg in New York, and Montreal in Canada, directly with the port of Boston. At that time a great railroad jubilee was held, lasting three days, at which the president of the United States, Millard Fillmore, and the governor-general of Canada, Lord Elgin, were present, with the members of their cabinets, and other distinguished men. By the Grand Junction Railroad, — the completion of which was a matter for special congratulation at the jubilee, much being expected from it, — the Eastern, Maine, Fitchburg, and Lowell roads were connected for freight, and brought to tide-water at East Boston: here ample wharf and storage room was provided, built in the most convenient and substantial manner, so that cars from the interior could be brought into immediate connection with vessels from every port, and the freight of the ship directly exchanged for that of the cars. The seven trunk-lines — the Worcester, Providence, Lowell, Eastern, Maine, Fitchburg, and Old Colony — had cost, when the great jubilee was held, nearly \$53,000,000, yielded an income of over \$6,500,000, and covered nearly 1,100 miles. The entire length of railroad situated, in whole or in part, in Massachusetts, at that time, was 1,411½ miles, at an aggregate cost of \$60,992,183, affording a gross income of \$7,445,961; and the entire cost of the railroads in the New-England States then operated exceeded \$100,000,000. Bostonians, besides their interest in their home roads, had large investments in railroads in the West; and it was estimated, at the time of the jubilee, that \$50,000,000 of railroad investments were held in Boston.

Such had been the growth of the railroad-system at the time of the great jubilee. But from that time to the present its further development has been quite as remarkable. It has been the means of building up many suburban cities and towns, by affording quick and frequent transit; and, for distant communication, it has been so extended and broadened that now the city is one of the great leading depots of commerce, in sharp competition with the other large cities; its railway lines reaching out in every direction, connecting with the magnificent systems of railways that unite the East and the Great West.

The Boston and Providence, the second railroad opened from Boston, enjoys the distinction of being one of the most completely appointed railroads in the United States. The road proper, from Boston to Providence, is 44 miles, and the branches and leased lines are $23\frac{1}{2}$ miles in length. The road runs the fastest train, as by regular schedule, between terminal points, of any road in the United States. This, the Shore-line express-train to New York, which leaves Boston at 1 P.M., arrives at Providence at 2 P.M. The 6.30 P.M. express-train carries large numbers of passengers to Stonington, who there take the famous Stonington-line steamers for New York.

Boston and Providence Railroad Depot, Columbus Avenue

These steamers are some of the finest ever built. The Boston and Providence Railroad constitutes an important part of the all-rail "Shore-line route" between Boston and New York, *via* Providence, New London, and New Haven, the terminal stations being the two finest in this country. The New-York station is the Grand Central. The Boston station, situated on Columbus Avenue, is the most convenient and comfortable, as well as most beautiful, architecturally speaking, in the United States; and it is the longest in the world, being 850 feet from end to end. The portion assigned

to the accommodation of passengers contains large and pleasant waiting-rooms, dining, reading, billiard, and smoking rooms, a barber-shop, and wash-rooms, all finished and equipped in a style equalled only by our best hotels. Upon the walls of the passenger-rooms are painted an index of stations and distances, and maps of the country passed through by this road and its connections. On the second floor are the offices of the company, which are approached from a gallery running around the grand central hall, one of the finest and most effective features of the building. Out of this hall open the waiting-rooms and other apartments described above. The train-house is 600 feet long and 130 feet wide; and its great iron trusses cover five tracks and three platforms. The entrance forms a fine feature of the façade; and at the Columbus-avenue corner is a lofty tower, with a large illuminated clock. The cost of this station was \$800,000. The president is Henry A. Whitney; and the superintendent, Albert A. Folsom.

The Boston and Albany Railroad succeeded the Boston and Worcester road, and forms one continuous line to the Hudson River, so long desired and contemplated, at the very beginning, in the railroad enterprises conceived by Boston men. The Boston and Albany Railroad Company was formed in 1869 by the consolidation of the Worcester and Western Railroads with all their branches and leased lines; the Western road having been opened from Worcester to the Connecticut River eight years after the opening of the Worcester road, and to the State line two years later. The length of the main line, with double track, is 201.65 miles; and the total length of line owned, leased, and operated is 323.66. It now owns and operates the Grand Junction Railroad and its extensive and finely-equipped wharves at East Boston, the completion of which did not at the time realize the expectations of its projectors; and for 14 years immediately preceding its purchase it was practically abandoned. This has been connected with its main line, and has thus secured a deep-water connection. It affords ample facilities for unloading the foreign steamers; moves large numbers of immigrants, in a prompt and comfortable manner, saving them from the danger and confusion of a passage through the city, and protecting them from sharpers; and altogether does an immense business through this enterprise. It also owns and operates a substantial grain-elevator here, with a capacity of 1,000,000 bushels; and another on the corner of Chandler and Berkeley Streets, with a capacity of about 500,000 bushels, its object being the supply of the city trade. The average annual dividends of the Boston and Albany have been 10 per cent until within a few years, when the general depression of business throughout the country has reduced them to 8 per cent.

In regard to length, equipment, and amount of passenger and freight traffic, this has been for many years far in advance of the other railroads entering Boston; but until recently its station in this city was not in keep-

ing with the importance of the road. Sept. 1, 1881, however, a new and elegant depot was completed, which takes its place among the best in this country. It occupies the block bounded by Kneeland, Lincoln, and Utica Streets; the entrance being through two large porticos on Kneeland Street. The front is chiefly of pressed brick, with heavy granite trimmings. The main structure—118½ by 140 feet—contains a vestibule, 42 by 120 feet, and 42 feet high, which is amply lighted in the daytime by a skylight covering the whole inner court. On one side is the ladies' waiting-room, 35 by 75

Boston and Albany Depot, Kneeland Street.

feet, handsomely and comfortably furnished, and provided with three large fireplaces fifteen feet in height, built of McGregor freestone; toilet-rooms and ticket-office. On the other side is the gentlemen's room, 35 by 38 feet; it, too, being handsomely fitted up. By its side is the news-stand and Armstrong's dining-rooms,—a model of convenience and elegance. The second story is used for the company's offices. A mezzanine story contains the treasurer's vault, rooms for depot-master and porters, and a laundry and culinary department. The third story is used by numerous clerks of the com-

pany. The train-house is 444 feet long and 118½ feet wide. It opens directly into the vestibule; and its tracks are numbered from 1 to 6 inclusive, with capacity of from four to seven cars. On the sides of the tracks are inward and outward baggage-rooms, and accommodations for persons coming and going in hacks and other vehicles. The train and passenger rooms are lighted by electricity. The architect was Alexander R. Esty. The president of the road is William Bliss; the general manager, C. O. Russell; and the general passenger-agent, Edward Gallup.

The Boston and Lowell Railroad is now part of a system connecting with the leading railroads of New Hampshire, the Central Vermont, and the Grand Trunk, and especially forming a continuous line to Montreal and other parts of Canada and the West. The Boston and Lowell formed a combination with the Nashua and Lowell Railroad in January, 1857, for the joint operation of the main roads and branches. On this basis the length of line directly operated by this company was 133 miles. This combination came to an end in December, 1878; but in October, 1880, the Nashua road was leased by the Lowell for 99 years. From its opening to the year 1875, the company's yearly dividends have varied from 2 to 8 per cent. The largest dividend was paid in 1873. None were paid between 1875 and 1877; but payment was resumed in 1878. In 1880 a regular dividend of 4 per cent was declared. The passenger-station in this city was recently built, and on a large scale, in anticipation of the extension of the Western business of the line, and also of the construction of the Massachusetts Central Railroad from Boston to Northampton and to the Hoosac Tunnel, which was suspended at the time of the financial crisis, but which will probably be completed in 1882. The passenger-station is 700 feet long, and has a front of 205 feet on Causeway Street. In the centre of the head-house is a magnificent and lofty marble-paved hall, finished in hard wood. Out of this open large and well-appointed waiting-rooms, a restaurant, bundle-rooms, baggage-rooms, a barber's shop, etc. The train-house is broad, spacious, and long; and its great arch has a clear span of 120 feet. The building material of the station is face brick, with trimmings of Nova-Scotia free-stone. Its appearance and convenience were greatly improved in 1878 by the addition of two broad entrances in the front. The building is flanked by two massive towers, the westerly one being much taller than the other. The president of the Boston and Lowell is the Hon. Josiah G. Abbott; the general manager, C. E. A. Bartlett; and the general ticket-agent, B. F. Kendrick.

The Massachusetts Central Railroad Company was organized in 1869, under a special charter to build a line from the town of Williamsburg to a point at or near Stony-Brook Station on the Fitchburg Railroad (12 miles from Boston), a distance of about 100 miles. The purpose of the projectors

was to construct a railroad through the central portion of the State, about midway between the Boston and Albany and Fitchburg roads, and to connect with the latter at Stony Brook. The idea of building from Williamsburg was abandoned at an early period; and in 1871-72 the line was finally located between Northampton and Stony Brook, following closely the survey made many years before for the proposed extension of the Erie Canal from Albany to Boston. The capital stock was fixed at \$3,000,000, of which \$812,000 was subscribed by the towns along the line; and in 1872 a contract was made with Norman C. Munson of Shirley for its construction and equipment. Mr. Munson began work at once, and pushed it so rapidly that by the autumn of 1873 about one-half of the line was completed, at a cost of about \$2,600,000. In March, 1873, the railroad property and franchise were mortgaged to Jacob H. Loud, Franklin Haven, and Thomas Talbot, trustees, as security for \$2,700,000 of 7 per cent currency bonds which it was proposed to issue. Negotiations for the sale of these bonds were nearly concluded when the financial panic of September, 1873, came. These negotiations being thus broken off, and it being found impossible to prosecute the work on the road, further operations were suspended. In 1875, with the completion of the Hoosac Tunnel, came the idea of extending the Massachusetts Central to form a part of a through line from Boston to the West. In 1879 an act was obtained from the Legislature authorizing the extension of the road from Amherst—7 miles east of Northampton—to a junction with the Troy and Greenfield Railroad of the Hoosac-Tunnel line; and also providing for the extension easterly from Stony Brook to an intersection with the Boston and Lowell Railroad at North Cambridge, about $4\frac{1}{2}$ miles from Boston. After the passage of this act, all the bonds issued under the mortgage of 1873, amounting to \$1,494,000, were retired, and the mortgage was cancelled. A new mortgage was executed in January, 1880, to George R. Chapman, Franklin Haven, and Thomas Talbot, trustees, to secure the payment of \$3,500,000, 6 per cent gold bonds, dated Jan. 1, 1880, and due in 20 years thereafter; and a new contract for the completion of the road was made with Mr. Munson. The capital stock of the company was also increased to \$3,500,000. Of the new bonds, \$1,500,000 were purchased by a syndicate composed of some of the strongest parties in Boston; and in February, 1881, \$1,000,000 more were sold in the market at nearly par. The company relocated a portion of its road, abandoning a large amount of work between Barre and Belchertown, and taking a new line running through the towns of Hardwick, Ware, and Palmer. This change shortens the distance and reduces the grades, and also brings the railroad into several large manufacturing villages, which will add considerably to its earnings. The contractor, Mr. Munson, resumed work in the winter of 1878-79, and in August, 1881, had the rails laid from the junction with the Boston and

THE BOSTON AND LOWELL RAILROAD DEPOT,
Causeway Street, Corner of Nashua.

Terminal Station of the
MASSACHUSETTS CENTRAL RAILROAD.

Lowell to Hudson (28 miles from Boston). From that point to Coldbrook (60 miles from Boston) the road was about ready for the track. Work between Coldbrook and Amherst was being pushed rapidly; and between the latter point and Northampton, including a bridge across the Connecticut River, the grading was nearly completed.

In March, 1880, a lease of the road was made to the Boston and Lowell for a term of 25 years from its completion, the rental being 25 per cent of the gross earnings. Until this lease goes into effect, the road will be operated by the Massachusetts Central Company, which will have the use of the Lowell Station and terminal facilities in Boston and Cambridge. The outlook for business upon this road is excellent. Aside from the through business *viâ* the Hoosac Tunnel, the road traverses a section of the State, the population and valuation of which are nearly double that along the line of the Fitchburg Railroad; and it gives a direct communication east and west to a large manufacturing interest located upon the various streams between Hudson and Amherst. There will also be a large business from the dairies at and near Barre, and points east of that town. The line crosses and connects with the following roads: the Fitchburg; Framingham and Lowell; Boston, Clinton, and Fitchburg; Worcester and Nashua; Boston, Barre, and Gardner; Ware River; Springfield and North-Eastern; New-London Northern; Connecticut-river; New Haven and Northampton; and Troy and Greenfield. It will bring a large population into direct communication with points east and west heretofore to be reached only by the lateral roads which connect with the Fitchburg on the north, and the Boston and Albany on the south. From Boston to Hudson on the new line is 28 miles; *viâ* the Fitchburg, 34; to Barre, 63, against 107 by the old route; to Ware, 75, instead of 95; to Amherst, 97, instead of 103; and to Northampton, 103, instead of 115. In the autumn of 1882 the Massachusetts Central will probably be wholly completed, and has prospects of becoming one of the most profitable lines entering Boston. Its completion is due chiefly to Mr. Munson, whom Boston people will always remember as the contractor for filling in and making salable the vast and valuable Back-bay district. Its satisfactory pecuniary condition at the present time is due to the confidence that Charles A. Sweet & Co., the Boston bankers, had in its ultimate success. Bonds taken by the syndicate formed by them are already selling at a premium above par. The president of the road is Ex-Governor George S. Boutwell; and the treasurer and clerk, George F. Seymour.

The Old-Colony Railroad Company was chartered March 16, 1844, to build and operate a railroad from Boston to Plymouth; and the road was opened for travel at the close of the following year. The present Old-Colony Railroad Company has absorbed the Old-Colony and Fall-River Railroad Companies, the Fall-River and Newport, the Cape-Cod, the Vine-

yard-Sound, the South-Shore, the Duxbury and Cohasset, the Middleborough and Taunton, the Dorchester and Milton, and the Boston, Clinton, Fitchburg, and New-Bedford, and Framingham and Lowell Railroads. The main line, from Boston to Plymouth, Provincetown, and Newport, is 249.89 miles in length; and with its various branches it controls and operates in all 475 miles of rail-lines, together with 225 miles of steamship routes; making a total of 700 miles of land and water routes. The main line runs through some of the largest manufacturing towns of Eastern Massachusetts, — Brockton, the Bridgewater, Easton, Taunton, New Bedford, and Fall River. Provincetown, one terminus of its main line, is the farthest seaward point

of Cape Cod. The northern division extends from Taunton to Attleborough, Mansfield, Framingham, Clinton, Fitchburg, and Lowell. A branch also reaches to Woods Holl, whence steamer connection is made to Martha's Vineyard and Nantucket. Other branches extend to Nantasket, Hing-

Old-Colony Railroad Depot, Kneeland Street.

ham, and Cohasset, famous summer resorts on the South Shore; to Marshfield, the old home of Daniel Webster; to Duxbury, where the American end of one of the Atlantic cables is held; and to other places of interest and importance. As the "land end" of the renowned Fall-River line to New York, with its magnificent steamers the "Bristol" and "Providence," as yet unapproached in size or grandeur by any in the world, the Old-Colony road is widely and favorably known. These boats cost \$1,250,000 each, and have carried more than 2,000,000 passengers. They are being constantly improved, and to-day are as attractive and inviting as when first launched. The "Pilgrim," a marvellous iron steamboat, with every comfort and luxury

of the present day, is now building at a cost of \$850,000. It is somewhat larger than the "Bristol." The Old-Colony has for many years paid a regular 6 per cent dividend. In the years 1873-75 it declared 7 per cent, and in 1880 6 per cent. The passenger-station in this city is on Kneeland and South Streets.

In 1876 the Old-Colony acquired control of the Union Freight Railway in this city, which is practically the distributor of freight from the railways to the wharves of the city, for lading steamships and other vessels. By the aid of this railway, an elevator, and dummy engines, a European steamship can be loaded in 24 hours. The Union Freight was first operated in 1872, and during the year conveys between 150,000 and 200,000 tons. The charge per car is \$4. Its tracks run to Constitution, T, Lewis's, Eastern-avenue, Commercial, Union, and Central Wharves. The line is 2.45 miles long, and extends from the Boston and Lowell to the Old-Colony tracks. The president of the Old-Colony road is Charles F. Choate; and the general superintendent, J. R. Kendrick.

The Fitchburg Railroad Company was chartered March 18, 1842, and was opened for travel to Waltham Dec. 20, 1843; to Concord June 17, 1844; and to Fitchburg March 5, 1845. It now operates the Vermont and Massachusetts road, extending from Fitchburg to Greenfield, under a lease for 999 years, and pays tolls through the Hoosac Tunnel, and in 1880 contracted with the State to operate the Troy and Greenfield Railroad for a term of 7 years. During the year 1878, extensive improvements were begun at the Boston end of the road, for the great volume of business expected through the road's direct connection with the Hoosac Tunnel, and the completion of the Boston, Hoosac-Tunnel, and Western Railway, largely owned by Boston capital, which will connect directly with the Erie road. The Hoosac-Tunnel Dock and Elevator Company was incorporated in 1879 to provide increased terminal facilities. It was authorized to take the property at the terminus of the Fitchburg line below Charles-river Bridge, from Tudor's Wharf to the Navy Yard, and construct and maintain docks, wharves, elevators, warehouses, and other buildings and structures for the export business of the Tunnel lines. The line of the main road to Fitchburg is 49.60 miles, and from Fitchburg to Greenfield 56 miles; and the total length of line owned, leased, and operated is 292.29 miles. For 20 years it paid a regular 8 per cent dividend. In 1877, however, owing to the depressed times, the dividend dropped to 6 per cent, but has since advanced to 7 per cent. The passenger-station in the city, on Causeway Street, is a massive structure of undressed granite, looking in front more like a grim old castle than a railway-station, and was built in 1847. In it was a large hall (since removed), in the upper part of this building, where the famous Jenny Lind concerts were given in 1850. The interior of the station has been several times re-arranged and

remodelled, and it is now quite convenient. Trains enter on one side, and depart on the other. The president of the company is William B. Stearns; the general superintendent of the road, John Adams; and E. K. Turner, the assistant superintendent. The Fitchburg company has a contract with the Leyland line of steamships, running between Boston and Liverpool, by which two and three steamships weekly receive and deliver cargoes at Constitution Wharf.

The Eastern Railroad Company was chartered April 14, 1836, to build a road from East Boston to the New-Hampshire line; and this was completed Nov. 9, 1840. The main line now runs, through consolidation with other roads, from Boston to Portland, and from Conway Junction to North Conway, N.H., 180 miles in all, with branches of 102 miles in length; the total length of lines owned, leased, and operated, being 281.69 miles. The length of road in Massachusetts is 120.79 miles; New Hampshire, 107.63; and Maine, 53.55 miles. For many years the company enjoyed great prosperity; but since 1873 it has not paid a dividend, and has passed through a most trying ordeal. Since 1876 the company has been steadily getting itself into a more satisfactory condition; and the indications at this time are, that it will soon be able to recover itself. The report of 1880 was the most satisfactory since the beginning of its difficulties. Thorough repairs have been made in almost all portions of the road; and the rolling-stock has been increased, being paid for from the earnings. In 1880 there was a decided increase in the earnings for transportation of freight, and in the number of passengers carried. Geographically the location of the road is all that can be desired. The branch to North Conway is one of the favorite modes of reaching the White Mountains; and it there connects with the Portland and Ogdensburg, running through the midst of the mountains. The Gloucester branch, from Beverly, through Beverly Farms, Manchester-by-the-Sea, Magnolia, and Gloucester, to Rockport, is one of the best branches controlled by this company; the summer travel along it being very heavy. The passenger-station in this city is on Causeway Street, between the stations of the Lowell and Fitchburg roads. It was built in 1863, after the destruction by fire of the former station, and is small and crowded. What space it affords is, however, well utilized; and the waiting-rooms are convenient and well arranged. It is of brick, with a central tower, upon which is a clock. The present president is E. B. Phillips, and Lucius Tuttle is general passenger-agent.

The Boston and Maine Railroad, as now constituted, was formed by the consolidation, Jan. 1, 1842, of the Boston and Portland Railroad, chartered in Massachusetts in 1833; the Boston and Maine, chartered in New Hampshire in 1835; and the Maine, New-Hampshire, and Massachusetts, chartered in Maine in 1836. The consolidated road was opened to the junction

with the Portland, Saco, and Portsmouth, at South Berwick, Me., in 1843. The latter road up to July, 1871, was leased to and operated by the Boston and Maine and the Eastern roads jointly. In 1873 the Boston and Maine was opened to Portland. The main line, from Boston to Portland, is 115 miles long; and, in addition, the company operates 83 miles of branches and leased lines. The main line passes through one of the most thickly-settled portions of New England. There are 42 cities, towns, and villages between Boston and Portland, many of them being devoted to manufacturing inter-

Boston and Maine Railroad Depot, Haymarket Square.

ests. The dividend paid in 1880 was 6.5 per cent; for several years previous to 1877, when it was 5 per cent, it was 6, 8, and 10 per cent. The passenger-station in this city is on Haymarket Square, at the foot of Washington Street, occupying a most prominent position. It was built long ago; but it has been extended, re-arranged, and improved internally, so that it is now convenient, light, and cheerful. The president of the Boston and Maine is Nathaniel G. White; and the superintendent, James T. Furber.

The **New-York and New-England Railroad Company** succeeded, in 1873, to all the property and rights of the Boston, Hartford, and Erie Railroad Company, which had itself absorbed the Norfolk-County Railroad, the Southbridge and Blackstone, the Midland, the Hartford, Providence, and Fishkill, and the road from Brookline to Woonsocket. It now owns and operates a railroad from Boston and Providence, through Willimantic and Hartford, to Fishkill-on-the-Hudson, connecting there with the Erie Railway; from Brookline, Mass., to Woonsocket, R.I.; and branches to Southbridge, Dedham, Springfield, Mass., and Rockville, Conn. It also operates under leases the Norwich and Worcester Railroad from Worcester to Allyn's Point, and thereby controls an independent Sound line of steamers to New York; the Rhode-Island and Massachusetts Railroad from Frank-

lin to Valley Falls, making a direct line from Boston to Providence without change of cars. The railroad and steamboat lines under its control aggregate 579 miles. By means of the transfer steamer "Maryland," running between Harlem River and Jersey City, first-class sleeping-cars are run through to Philadelphia and Washington every day, starting from the depot on Atlantic Avenue at the foot of Summer Street every evening. Freight is transported by the "Maryland" without breaking bulk; and, by connection with the Pennsylvania Railroad at Jersey City, a large amount of through Western business is done over the New-York and New-England road. This road, starting as it does from three of the largest New-England cities, — Boston, Providence, and Worcester, — with good connections for the West, and its all-rail and Sound lines for passengers and freight to New York, has certainly a bright future. The president is Gen. James H. Wilson, and the general passenger-agent is A. C. Kendall.

The Boston, Revere-Beach, and Lynn Railroad is a narrow-gauge road, running from East Boston (connected with the city proper by ferries that start from Atlantic Avenue at the foot of High Street) to Lynn along the crest of Revere Beach. This magnificent beach, almost five miles long, is dotted at short intervals with hotels, many of which have gained such reputations that thousands of people are attracted to them daily in the summer season. Trains run hourly during the day and evening, and carry a large number of passengers travelling for pleasure. The three-feet gauge is admirably adapted to the purposes of the road. The Boston, Winthrop, and Point-Shirley road connects with this road at Winthrop Junction, and runs thence to the watering-place of Ocean Spray in the town of Winthrop. Edwin Walden is president; J. A. Fenno, treasurer; and E. H. Whorf, superintendent.

The Railway Clearing-House Association was organized in May, 1878, for the purpose of keeping a complete record of the movements of all cars on the New-England railroads, and to provide for the settlement of balances for car-service between the different railroad companies. Its affairs are administered by an executive committee elected by the railroad companies of New England; the operating expenses being shared by the companies in the association on the basis of the total mileage of cars on each road. The movements of foreign cars coming into New England, as well as those of the New-England roads, are recorded daily; and at the close of the month the mileage is computed. This mileage now aggregates about 25,000,000 miles each month. This work, of course, involves an immense amount of detail, and requires the services of some sixty clerks. The offices are in the passenger-depot of the Boston and Lowell Railroad. The present manager, E. B. Hill, was the originator of this enterprise.

The Railroad Business of Boston is shown in the following table, com-

piled from the commissioners' reports for the year ending Sept. 30, 1880:—

RAILROADS.	Loco- motives.	Passenger- Cars.	Baggage, Express, and Mail Cars.	Freight and other Cars.	Passengers carried.	Tons of Freight carried.
Boston and Albany .	248	188	48	5,710	5,993,297	3,310,539
Boston and Providence,	48	100	18	733	3,574,104	669,468
Boston and Lowell. .	51	72	30	750	2,876,531	1,068,230

Boston, Revere-Beach, and Lynn	5	23	..	18	924,521

Boston has been, from the start, a commercial city; and its commerce has been most extensive. The first ship was built as early as 1631; the quaint records of the early day stating, under the date of July 4 of that year, "The Governour built a bark at Mystick which was launched this day and called the Blessing of the Bay." The first regular steamship that arrived in Boston from across the Atlantic was the "Acadia," of the Cunard line, in 1840. The advantages of the situation of the city, set upon a harbor, deep, capacious, secure, and unobstructed at all seasons of the year, were early comprehended by the people; and the shipping-interests were fostered and extended with wise judgment and great rapidity. Even before the close of the seventeenth century the product of the land was shipped to Virginia, the West Indies, Great Britain, Portugal, Spain, and Madeira, in exchange for the fruits, wines, and manufactures of those countries; and the construction of wharves on a systematic scale was begun. In the early part of the nineteenth century great improvements were made in the wharves and the streets leading thereto. Long Wharf had been built since 1710, and was then much longer than it now is, owing to the filling-in and extension of the water-front. The building of Central Wharf, with a line of 54 stores four stories high, was one of the early improvements of the nineteenth century; and before 1850 the whole margin of the city on the east and north was lined with about 200 docks and wharves, affording an extent of wharfage of over five miles, with fine warehouses, many of granite, presenting a solid

and substantial appearance. Of the magnitude of some of these wharves a few figures will give an idea. Before the building of Atlantic Avenue, which has been built by the making of new land across the head of the wharves, thus shortening their length, Long Wharf extended 1,800 feet into the harbor, with a line of 76 warehouses; Central Wharf, 1,379 feet; and India Wharf, 980 feet. Among other extensive wharves are T, Commercial, Lewis's, Russia (formerly Griffin's Wharf, which was the scene of the famous "tea-party" in the early days of resistance to British oppression), Battery, and Constitution Wharves. The fine deep-water front across the harbor on the East-Boston side, and Constitution Wharf in the city proper, accommodate the European steamships. In East Boston, besides the extensive Grand-Junction wharves of the Boston and Albany Railroad, are the Cunard Wharf, and the wharves of the National Dock and Warehouse Company, where the bulk of the East-India trade is done. In the Charlestown district the water-front is taken up by the Navy Yard, wharves belonging to the Fitchburg Railroad Company, the large Mystic-river Wharf of the Boston and Lowell Railroad Company, with its grain and coal elevators, and the wharf of the Mystic-river Corporation. On the south side of the harbor the filling-in of the South-Boston flats is rapidly advancing; and large deep-water docks and wharves, with railroad freight-yards, will soon be ready to accommodate ocean steamships at available points along the entire water-front.

The Shipping-interests of Boston suffered a temporary check during the war of the Rebellion, but they are now steadily and rapidly improving; and the city maintains its position as the second commercial port in the Union. There are now ten or more different steamship lines to Liverpool, Glasgow, London, Hull, and the Continent; the addition of the Allan Line having added important Grand Trunk Railway connections. Ten years ago the Cunard steamships were the only transatlantic ones running to Boston, and they ran but once a fortnight. There are also regular weekly lines to the Provinces of New Brunswick, Nova Scotia, and Prince Edward Island; a regular line to the Western Islands; and coastwise steamers to Philadelphia, Savannah, Baltimore, Norfolk, New York, and Portland. Among new lines projected is one to the West Indies. The export trade of the city is steadily progressing. The total exports for 1880 were valued at \$69,178,764, the largest on record, and an increase over the previous year of \$14,051,144. The total imports were valued at \$68,649,664, an increase over those of 1879 of \$20,097,355, the largest except in 1872.

The Cunard Line of Atlantic steamships employs six vessels in its Boston service,—the *Batavia*, *Palmyra*, *Marathon*, *Malta*, *Samaria*, and *Atlas*. Sailing days from this port are Saturdays. The steamships are

stanch and capacious, and have long been popular with the travelling public. The company has adopted a "lane route" for all seasons, with the view of diminishing the chances of collision. The Cunard docks are at the foot of Clyde Street, East Boston. They are extensive and spacious, well lighted and thoroughly equipped. They are so arranged that the company can load and discharge three of its vessels at a time. They are covered docks with railroad tracks running into them along three sides, and freight is received from the cars on to platforms. The arrangements for the transfer of emigrants directly from the incoming steamers to west-bound cars are very complete. Their transfer through the city, and their detention at the port, are thus entirely avoided. The business offices of the Cunard Company are at No. 99 State Street. Paul H. DuVernet is the general manager.

Peabody's Australia, New-Zealand, and South Africa Line of packets connects this port with all ports in Australia and the Cape. It is under the management of Henry W. Peabody & Co., the only Boston house in the Australian trade and a leading one of those in the Cape trade. Strictly A 1 vessels are despatched monthly to Melbourne and Sydney, and somewhat less frequently to all other Australian ports and the Cape. Freight is received from all offering, in the same manner as is done by other transportation lines; but the larger portion is made up of purchases by the house on account of merchants and traders in the colonies. This is a prominent feature of the business of Peabody & Co., and an important one as bearing on the export trade of Boston. The house comes into direct contact with its customers in the colonies through its correspondents there, and its representatives who make periodical trips from the home office. Its purchases for export are extensive, largely of the products of New-England manufactories; and it has aided in building up between the ports a trade already large and important, and steadily increasing. From 35 to 40 vessels will be despatched to the several Australian ports this year, and about ten to the Cape. While the Australian trade is an important interest, largely connected directly with Boston, that of the Cape is particularly a Boston trade; and goods are delivered there from this port cheaper than from any other. Goods are frequently shipped directly from the manufactories in the cars, and to the vessels from the cars which run on to the wharf. The vessels of the line load by the side of covered sheds; so that the cargo is not exposed to the weather, an advantage of no little importance. This firm was established in 1859. It is composed of Henry W. Peabody, who has long been in the Australian trade, E. P. Sargent, and Charles D. Barry. Their office is at 114 State Street, and their packets generally sail from Lewis Wharf.

The Anchor Line of Trans-Atlantic, Peninsular, Mediterranean, and Oriental steamers consists of a fleet of 42 full-powered iron steamers of the highest class, all Clyde-built, commanded by men of large experience trained in the service. In addition to a fortnightly service from Liverpool, *via* the Suez Canal, to Bombay, and a weekly service from Glasgow to the Mediterranean, this company embraces six regular services from the United States to the United Kingdom. Founded in 1852 by the present managing owner, Thomas Henderson, the line has grown from insignificance to its present gigantic proportions. Beside the steamship business, the Messrs. Henderson own the Meadows side ship-building yard and graving dock on the Clyde, and one of the largest engineering works in Glasgow, where they now build and equip steamers for their various trades. The Boston steamers are despatched from Commonwealth Dock, South Boston, for London every fortnight, and for Glasgow every fortnight. The agents are Henderson Brothers, 7 and 9 State Street.

The Allan Line of Atlantic steamships, sailing between this and Canadian ports and Londonderry or Liverpool, employs a large fleet of double-engine, Clyde-built, iron vessels, constructed in water-tight compartments, and noted for their strength, speed, and comfort. Under an arrangement made in the winter of 1880-81, its entire fleet of large steamers, including the new "Parisian," one of the finest steamships in the Atlantic service, sail from this port between the months of December and May; and during the summer months five sail from Boston, — all passenger and freight steamers, — the others from Quebec. The pier of the Allan Line is at No. 1 Grand Junction Wharves, East Boston, and is large and commodious, with ample and improved facilities for loading and discharging cargoes rapidly. The line also employs a fleet of fourteen staunch Clyde-built iron clipper ships. The business offices of the company are at No. 80 State Street. The resident managers are John L. Allan and Hugh A. Allan.

Besides the lines mentioned above, all of which reach Boston, there is a vast business done through lines having their terminal stations in New York and elsewhere. For instance, C. L. Bartlett & Co., 115 State Street, represent the White Star Line to Liverpool, the Atlas Mail Line to Jamaica, Hayti, Porto Rico, and ports of the Spanish Main and South Pacific, the Red Star Line to Antwerp, and the Pacific Mail Line to California. Their freight and passengers are booked in Boston, and may therefore be included in the commerce of this city. The firm of C. L. Bartlett & Co. — composed of C. L. Bartlett and Edward A. Adams — is one of the oldest of steamship-agents, ship-brokers, and commission-merchants, in the city, the firm having been established in 1849. They also handle and disburse sailing vessels or steamers consigned to them in Boston.

Hotels and Restaurants.

THE PRINCIPAL TRANSIENT AND FAMILY HOTELS, THE RESTAURANTS AND CAFÉS.

THE first tavern in Boston is said to have been opened in 1634, by Samuel Cole, on Merchants' Row. During the seventeenth century the leading taverns were the State Arms, the Ship, the King's Arms, the Castle, the Red Lion, the King's Head, and the Green Dragon; most of which were at the North End. Histories tell some droll stories of these old taverns. In the last century the most celebrated houses were the British Coffee House, the Royal Exchange, the Roebuck Coffee House, and the Green Dragon Tavern; the latter being the headquarters of the Liberty Boys. When coaches came into vogue, such houses as Earl's, the Elm-street, the Eastern Stage, and the City Tavern were opened: the latter, situated on Brattle Street, was owned by Simeon Boyden, who has been called the "father of the hotel system of the United States." The Boston Exchange was built on Devonshire Street in 1804, and burned in 1818, when the conflagration is said to have interrupted a game of cards in which Henry Clay held three aces. The Lion, the Lamb, the Pearl-street House, Hatch's, the Commercial Coffee House, and the Sun Tavern became famous hosteleries and places of resort. Succeeding these came the Marlborough, the Albion, the Bromfield, and others; some of which, although still standing, have outlived their pre-eminence. But it is regarding the hotels of the present time that the reader is to be informed. Until within a few years visitors sought hotel accommodations almost wholly in what is now the heart of the business district; but since the completion of Boston's two most famous hotels, — the grand Hotel Brunswick, erected in 1874, and the palatial Hotel Vendome, erected in 1880, — the wealthier class of visitors seek the magnificent accommodations offered by those hotels, situated in one of the finest residence districts in the city, and surrounded by noteworthy public buildings, broad thoroughfares, and attractive parks.

The Vendome is the newest hotel in Boston, and one of the most palatial and most elaborately furnished hotels in the world. Its main front is on the most beautiful American thoroughfare, — Commonwealth Avenue, — which bisects the Back-bay district, one of the finest architectural sections to be found in any country. This avenue is 240 feet wide; through its centre is a strip of park-land 100 feet wide, lined with trees and shrubs, and

THE HOTEL VENDOME (J. W. WOLCOTT, PROPRIETOR),
Commonwealth Avenue, corner of Dartmouth Street.

containing the Hamilton and Glover statues. It is to be constantly improved. The Vendome front on Commonwealth Avenue extends 240 feet, and the front on Dartmouth Street 125 feet. Including the mansard roof and the basement, it is eight stories in height. The fronts are of white Tuckahoe and Italian marble, the windows and doors having elaborate carvings. The roof and towers are of wrought iron covered with slate. The floors are laid upon iron beams and brick arches; and all interior partitions are of strictly incombustible material. On the first floor are the various public rooms, five dining-rooms, an elegant banquet-hall 30 by 110 feet, and the grand parlors; all reached by the main entrance and by a private entrance on Commonwealth Avenue, so that clubs and parties can be served without interference with the ordinary business of the hotel. There is also an entrance for ladies on Dartmouth Street. The rotunda is paved with English encaustic tiles, in colors and patterns harmonizing with the furnishings, and is most exquisitely finished in hard woods, cathedral glass, and fresco-work. The great dining-hall, with seats for 320 persons, is richly adorned with mirrors, carved mahogany and cherry wood, frescos, and a handsome frieze. Each of the six upper stories contains seventy rooms, grouped so as to be used singly or in suites. Two celebrated Whittier passenger, one baggage, and several small elevators for special purposes, provide ample facilities for transit up and down. The plumbing-work is almost marvellous; for every improvement to secure health and comfort has been introduced. Every apartment has access to a spacious bath-room, which, as well as every gas-fixture, has its independent ventilating-tubes. No open basins are placed in chambers, all being shut off in the closets adjoining. Every room is provided with open fire-places, although the whole building is heated by steam. The registers serve a double purpose, — supplying either ventilation or warmth, the change being made by simply turning the knob to the right or to the left. In short, there is hardly an improvement of modern times that has not been introduced into this noble edifice. The furniture, too, in every room, on all floors, is luxurious; the parlors being as beautifully furnished and as handsomely decorated as those of any American hotel. The Vendome is conducted on the American plan, the charges being \$5 per day. It was built by Charles Whitney, a wealthy citizen of Boston, at a cost of a million dollars, expressly for Col. J. W. Wolcott, who is to-day recognized as the peer of any hotel landlord, and who has in his several hotels entertained a host of eminent personages.

The Hotel Brunswick, situated on Boylston Street, corner of Clarendon, is one of the grandest, pleasantest, and most handsomely furnished hotels in the world. Its site is very delightful and easily accessible. It is just across the street from Trinity Church, the Institute of Technology, and the Society of Natural History, and is within a few minutes' walk of the Mu-

seum of Fine Arts, Public Garden, Boston Common, Boston Art Club, Mechanics' Association building, and several of the new church edifices, among which are the New "Old South," Arlington-street, First Church, Central, and Emmanuel. It is as convenient to depots and all parts of the city as are any of the old hotels. Boylston Street, on which the Brunswick fronts, is a fine thoroughfare 90 feet wide. The "Beacon-street," the "Huntington-avenue," the "Belt Line," and the "Dartmouth-street" cars pass directly in front of the hotel; and other lines of cars run close by. The hotel is conducted on the American plan, the terms being \$4.50 per day. The Brunswick building, designed by Peabody & Stearns, the Boston architects, is essentially fireproof. It covers more than half an acre of ground, is 224 by 125 feet, six stories high, with basement, and contains 350 rooms. The chambers are supplied with all modern conveniences: every apartment has hot and cold water, and every suite a bath-room. The Whittier passenger-elevator is one of the most luxurious in Boston. The structure is of brick, with heavy sandstone trimmings. The principal finish of the first two stories is of black walnut. On the right of the principal entrance are two parlors for the use of ladies, and on the left of the main entrance is the gentlemen's parlor. The ladies' parlors were wholly refurnished in 1881, and are now probably the handsomest hotel parlors in this country. On the easterly side of the house is the new dining-hall, dedicated upon Whittier's seventieth birthday, when the proprietors of "The Atlantic Monthly" gave the dinner at which so many noted American writers were present. On the right of the ladies' entrance is the large dining-hall, 80 feet long by 48 feet wide. Both dining-halls have marble-tile floors, the walls being Pompeiian red, and the ceiling frescoed to correspond. The five stories above are divided into suites and single rooms, all conveniently arranged, and provided with every modern improvement, including open fire-places, besides steam-heating apparatus. Every thing seems to have been done to make the house homelike, comfortable, and attractive, and free from the usual cheerless appearance of hotels. The cost of the building was nearly a million dollars. It was built in 1874, and enlarged in 1876. President Hayes, when attending the Harvard Commencement in 1877, with his family and suite, occupied rooms at the Brunswick. The rooms were entirely refurnished, and the hotel elaborately decorated, for the occasion. At this hotel Gen. Grant was given a complimentary banquet on the return from his trip around the world. Ex-Govs. Rice and Talbot reside at this hotel. Many of the Harvard classes, the alumni of Bowdoin College and of Williams College, the Bar Association of Boston, and several literary and social organizations, have selected this as the place for their annual dinners.

Ever since the Brunswick has been open it has been filled with the

Helio-type Print.

HOTEL BRUNSWICK.

TRINITY CHURCH.

HOTEL BRUNSWICK, BOYLSTON STREET, BOSTON.

Barnes & Dunklee, Proprietors.

wealthiest class of transient and permanent guests; the former including a good part of the distinguished people who have been in Boston during the past seven years, and the latter including many of the best-known citizens. The proprietors are Amos Barnes and John W. Dunklee, both of whom are long-experienced and well-known landlords. Under the skilled hands of its managers, the Brunswick has become one of the most famous hotels of modern times.

The Parker House fronts on School and Tremont Streets. It was founded in 1854 by Harvey D. Parker, and is a large six-story marble-front edifice, containing 260 rooms, including many large drawing-rooms and suites. The price of rooms ranges from \$1 to \$5, and of suites from \$8 to \$12 per day. The house is on the European plan, and the restaurant is one of the finest in the country. The café is the rendezvous and exchange for politicians and business men on all occasions; while at times, such as election night, the lobby becomes the resort of crowds, and presents an animated scene. The Parker House has been one of the most successful of American hotels.

Young's Hotel is a well-known house in the business section of the city. It is situated near the head of State Street, and faces the Old State House and the County Court House. It is a substantial brick building, with entrances on Court Square, Court Avenue, and Cornhill Court; but it is so closely surrounded by high buildings that scarcely any idea of the exterior appearance can be obtained. It is on the European plan, and has accommodations for about 125 persons. The prices of lodging range from \$1 to \$3, according to location of room. This hotel is patronized almost exclusively by men; and its restaurant is one of the most famous in Boston. George Young was for many years the proprietor, hence its name. The present proprietors are George G. Hall and Joseph Reed Whipple, under the firm-name of Hall & Whipple.

The Evans House is a handsome brown-stone structure at No. 175 Tremont Street, facing the Common, and pleasantly situated. The hotel is on the American plan, and is provided with a passenger-elevator, and all modern improvements. It has accommodations for about 350 people. The prices are \$3.00, \$3.50, and \$4.00 a day. A great many actors make the Evans House their home, during their stay in Boston. The proprietor is A. L. Howe, who during the year 1878 opened the Hotel Wellesley, at Wellesley, Mass., and in 1879 bought and has since conducted the Massapoag Lake Hotel at Sharon, Mass., both of which, under his management, well earned their reputations as first-class summer hotels.

The Tremont House, corner of Tremont and Beacon Streets, was the pioneer first-class hotel in America. It was built in 1830, and has been altered from time to time; and it is now contemplated to make a radical

change in the building, at a cost of perhaps \$200,000. The proprietors are Silas Gurney & Co. The prices are \$3.50 and \$4.00 a day.

The **St. James Hotel** is one of the best and largest hotels in the city. It accommodates about 500 guests, and has over 400 rooms. The price for transient board is \$3 a day. The proprietor, J. S. Doyle, is also the proprietor of the Rockland House at Nantasket Beach, and was formerly of the American House. The St. James is finely situated on Franklin Square; which is a beautiful park, with trees, flowers, and fountains. The house is surrounded by broad streets, and the locality is exceedingly healthy. It was built in 1867 by Maturin M. Ballou, and is of brick, with granite facings and a French roof. It is provided with reading and smoking rooms, club-rooms, ladies' and gentlemen's parlors, telegraph-office, billiard-room,

St. James Hotel, Franklin Square.

and two elevators. The St. James is the largest family hotel in the city, and one of the most expensively furnished. The Washington-street cars pass near by every minute of the day.

The **United States** is one of the oldest and best of the well-established hotels of the city. Its fame is wide-spread. Its seal dates back to 1826; and from that early date to the present it has been maintained up to the best standard, but never better than now. It is situated directly opposite the station of the old Boston and Albany Railroad, within two blocks of the Old Colony Railroad, only a short distance from the New York and New England Railroad station, and not far from the retail portions of the city and the great commercial centres. The street-car service of the city

surrounds it with its net-work of lines radiating to all parts of the city and suburbs; it is near the seashore lines of steamboats, and its location is in other respects unusually convenient for the travelling public. It was built before the establishment of the great railroad system which gave such an impetus to the business interests of Boston; but, anticipating the changes to be wrought in the immediate future, its projectors selected its site with rare foresight. When it was built, it was the largest hotel in the city, and was regarded as a noteworthy accession to the public buildings of the place. It has since been twice enlarged by the addition of an entire block on Lincoln Street and another on Kingston Street, named respectively "Oregon" and "Texas," as they were built at the time these States were admitted into the Union. The property now covers the entire square, nearly two acres of ground, enclosing generous areas for light and air half an acre in extent. The house is built of brick, with broad and inviting entrances; is but three stories high; its five hundred rooms are exceptionally large and comfortable, well-ventilated, and all open to the

United-States Hotel, Beach and Lincoln Streets.

sunlight; its public rooms spacious and high-studded; and its broad halls extending through the entire front and wings, giving plenty of light and air throughout the building. For many years it was the favorite stopping-place of the distinguished men of the country coming from time to time to Boston. Daniel Webster for a while lived here. Here Charles Sumner entertained Dickens; and many noteworthy and elegant banquets have been given in its spacious dining-hall. Of late years families owning country places, and others, have made it their city winter residence, while it has continued to be steadily popular with transient guests. About two years ago the house passed into the hands of the Hon. Tilly Haynes, a well-known gentleman, formerly of Springfield, who has served as a State senator and in the executive council; and he has so completely restored, rebuilt, and refurnished it, that it has again taken a front rank among the notable public houses of the city.

The American House, No. 56 Hanover Street, Lewis Rice & Son, proprietors, is the leading business-house of the city kept on the American plan. It was first opened in 1835, and was entirely rebuilt in 1851, covering the sites of the old American House, Hanover House, Earl's, and Merchants' Hotels. On part of this ground stood the home of Gen. Warren. Additions and improvements have since been made; and it is now one of the largest, as it is reputed to be one of the

American House, Hanover Street.

best-managed, hotels in New England. It is finely furnished, has wide corridors, spacious public drawing-rooms, and all modern improvements for the comfort and convenience of its guests. The first passenger-elevator in Boston was constructed for this house. It has always borne an excellent reputation, and has long been the headquarters of the shoe-and-leather trade, and a popular resort for Western and Southern merchants. It has fine family suites, and is conveniently situated for business or pleasure. The prices are \$2.50, \$3.00, and \$3.50 per day. The original American House and the present one have been, during forty consecutive years, under the management of the late Lewis Rice and his son Henry B. Rice.

The Revere House, on Bowdoin Square, is a large and well-appointed hotel on the American plan, having accommodations for 250 guests, and charging \$2.50 to \$4.00 a day, according to the location of rooms. It was built in 1847 by a company of prominent gentlemen, and was named after the Revolutionary hero Paul Revere. For many years it was under the management of Paran Stevens, who was also lessee of the Fifth-avenue Hotel in New York, and the Continental Hotel in Philadelphia. The Revere House is one of the most comfortable and homelike hotels in the country, and the

Revere House, Bowdoin Square.

cuisine is equal to that of any hotel in New England. Many public banquets are given at this house. Club and class dinners are made a specialty, and the house has the reputation of serving them in the most elegant manner. There are large reception-rooms, private parlors, and all other public apartments usually found in first-class hotels. Precautions have been taken to guard against fire; and elevators, corridors, and staircases extending through the house, render it easy of exit. Bowdoin Square, on which the house fronts, is a street-car centre. Among the distinguished people who have stopped here are President Grant, the Prince of Wales, King Kalakaua, the Emperor Dom Pedro, the Grand Duke Alexis, Jenny Lind, Christine Nilsson, Adelina Patti, Parepa Rosa, and Theresa Titiens. The proprietor is C. B. Ferrin, who for many years was connected with the Parker House of Boston, and for the past ten years was proprietor of the Westminster Hotel of New York.

Other Hotels, about 150 in number, of various grades, are in almost every part of the city. Among the better class in the city proper are the Commonwealth Hotel, 1697 Washington Street, kept by Carter & Brugh; the Crawford House, corner of Brattle and Court Streets, by Stumcke & Goodwin; the Quincy House, corner of Brattle Street and Brattle Square, by James W. Johnson & Co.; the Adams House, 555 Washington Street, by T. A. Barker; the Creighton House, 245 Tremont Street, by William Hill; the International Hotel, 625 Washington Street, by G. R. Reichardt; the New Marlborough Hotel, 738 Washington Street, by Charles H. Moore; the Metropolitan Hotel, 1166 Washington Street, by F. S. Brockway; the Sherman House, Court Square, by Thomas L. Smith; and the New-England House, corner Clinton and Blackstone Streets, by Josiah T. Wilson. In East Boston is the Maverick House, Maverick Square, by Ivory Goodwin; in the Roxbury District, the Norfolk House, Eliot Square, by Charles A. Jones; and in the Brighton District, the Cattle-Fair Hotel, Washington Street, by James I. Nesmith.

The "French flat" or Continental system of dwellings, sometimes called "family hotels," — a single tenement occupying the whole or part of a floor, instead of several floors in a house, — gained its foothold in America by its introduction in Boston. Before the annexation of the surrounding districts, Boston is said to have been the most densely populated city in America, and there was a natural demand for economy in space. The first building of the "French flats" or "family hotel" class was the Hotel Pelham, at the corner of Tremont and Boylston Streets, built by Dr. John H. Dix about twenty years ago. At the widening of Tremont Street, this building was raised up bodily, and moved about twenty feet down Boylston Street, without disturbing the occupants, or in the least disarranging the interior, — a feat of engineering regarded at the time as most remarkable,

being the first instance of the moving of such a large mass of masonry. This style of dwelling rapidly increased in popularity, and now their number is so great that it is hardly practicable to mention them here. They range from the most palatial and elegant structures, equally beautiful in exterior and interior decorations, to plain and comfortable houses adapted for people of moderate means. The greater portion of the costly class have passenger-elevators. The price paid for the rent of a dwelling generally includes the steam-heat and the service of the janitor, who performs the heaviest drudgery. Among the most prominent of these houses are the Hotel Pelham, before mentioned; the Hotel Boylston, on the opposite corner, owned by Charles Francis Adams; the Berkeley and the Cluny, on Boylston Street; the Vendôme, the Hamilton, and the Hekla, on Commonwealth Avenue; the Huntington, at the corner of Huntington Avenue and Dartmouth Street; the Hoffman, the Edinburgh, the Albemarle, and the Berwick, on Columbus Avenue; the Blackstone, fronting on Blackstone Square; in the Roxbury district, the Dartmouth and the Comfort; and in the Charlestown district, the Waverley.

The Restaurants and Cafés of Boston number nearly 500. Excepting those connected with hotels, there are not many worthy of particular mention. As a rule, they furnish good food at reasonable prices, and are well kept, and situated in all parts of the city. The cafés of the Parker House, Young's Hotel, Revere House, and Tremont House, are frequented by persons desiring a hasty first-class meal. Of some of the noteworthy restaurants brief sketches are given.

R. Marston & Co.'s Dining-Rooms, Nos. 23 to 29 Brattle Street, comprise the lower floors of three buildings. They are in many ways arranged so as to secure the least possible amount of heat, confusion, and odor. One room is reserved for ladies, or ladies accompanied by gentlemen; and the others for gentlemen. The table-ware, linen, furniture, fixtures, and ornaments are all new and kept in the neatest manner; the pantry and kitchen on the first floor, the store-, dish-, wash-, drying-, and boiler-rooms in the basement, are as cleanly as any one could desire. Moreover, one can here obtain just as good meals as can be obtained anywhere. The Marston restaurant, with its 250 seats, is the largest in the city; and that a host of people are its patrons is shown in the fact that in ordinary times from 1,500 to 2,000 meals are served daily; while on holidays, or in times of special excitement, double these numbers are served. The possession of one of the neatest, largest, and most extensively patronized dining-rooms in New England is in this case held by a man of long and successful experience; for the senior partner, Russell Marston, has been in this same business since 1846, when he opened the little eating-house on Commercial Street, at the head of the Philadelphia Packet Pier. There he remained, gradually

enlarging his quarters until 1851, when he moved to the vicinity of his present establishment. A short time afterward he opened at what is now No. 23 Brattle Street, where he has ever since remained, adding from time to time Nos. 25, 27, and 29. He has been aided during the past fifteen years by his son, Howard Marston, who is now the junior partner. In 1881 the place was wholly remodelled and refurnished; so that, while the business has been long established, the dining-rooms are quite modern. The location, too, is convenient; Brattle Street being one of the oldest and best-known

R. Marston & Co.'s Dining-Rooms, Brattle Street.

streets in the city. Just below the Marston rooms, stood, for 174 years, the Brattle-square Church,—from 1699, when the society was organized, until 1873, when it erected the handsome edifice on Commonwealth Avenue. The street extends only from opposite Tremont Row on Court Street to Washington Street. The Marston dining-rooms are uniquely indicated; for directly in front stands one of the celebrated Howard pavement-clocks,—the only one in Boston, serving as an admirable and useful landmark.

Frost & Dearborn's Restaurant is one of the largest, finest, and most popular dining-saloons in the wholesale district. It is situated at 8 and 10 Pearl Street, a short distance from Milk Street, and directly opposite the Pearl-street entrance to the building of the Mutual Life Insurance Company. It was opened in 1873 by Samuel E. Kendall and John N. Dearborn, and was then known as Kendall's Restaurant. Mr. Kendall will be remembered as having kept for a series of years some of the best restaurants that Boston has ever had. One of these was under the Old State House, and in its day was a rival of Parker's. Another was at 8 Congress Square, where he continued for 17 years. This was always patronized by the most prominent business men; and, until destroyed by the Great Fire of 1872, it was considered one of the most successful restaurants in Boston. The present establishment has, from the time when it was opened, met with that success which Mr. Kendall's reputation and experience guaranteed it. In his efforts to conduct first-class restaurants, Mr. Kendall was always greatly aided by John N. Dearborn and Morrill Frost. Mr. Dearborn, for instance, was connected with him for 25 years; and Mr. Frost was in his employ for many years, beginning in 1845 under the Old State House. In 1875 Mr. Kendall died; and Mr. Frost, after being for 21 years the proprietor of the restaurant and news-stand in the Boston and Albany Railroad Depot, became associated with Mr. Dearborn. From the above it is seen that Messrs. Frost & Dearborn have long experience, a good prestige, an admirably furnished and conveniently situated restaurant, and it only needs to be added that their *cuisine* is unexcelled in Boston.

Other Restaurants worthy of mention are those of L. P. Ober, 4 Winter Place; A. F. Copeland, 4 Tremont Row and 467 Washington Street; Fred. E. Weber, 25 and 27 Temple Place; George Fera, 162 Tremont Street; Stumcke & Goodwin, 9 to 13 Brattle Street; Marston & Cunio, 19 School Street; D. T. Copeland, 128 Tremont Street; Thomas H. Smith, 9 Exchange Place; Albert Fellner, 129 Federal Street; John D. Gilman, 50 Summer Street; Isaac M. Learned & Co., 413 Washington Street; Campbell & Coverly, 233 Washington Street.

The Public Buildings.

CITY, COUNTY, STATE, AND UNITED STATES BUILDINGS; AND CITY GOVERNMENT.

THE pride with which the Bostonian shows the public buildings, and those devoted to art, literature, and education, is not unreasonable. Without exaggeration, it can be said, that no city in the country presents a finer or more substantial class of buildings. They are not all imposing, and few are "showy;" they are not all of modern style, after one pattern; but they are, as a rule, thoroughly and honestly built; and generally attractive and satisfactory, so far as architectural design is concerned, even to the educated critic. Some are stately and impressive; others have an every-day business look about them; and all are a credit to the city, and to those who planned and built them.

Boston, as a city, owns upwards of 300 public buildings, covering perhaps 120 acres of land. Its county buildings are valued at about \$3,000,000; its public buildings, specifically classified as such, \$7,700,000; and its school-buildings, \$8,500,000. Several of these return good incomes, such as the Quincy-Market building, \$70,000 a year; Faneuil-Hall Market, \$20,000; and the Old State House, \$16,000. The State and National buildings, some of which are costly, are not included in the above valuations.

In this chapter we shall give some practical information, concisely put, of some of these buildings, and, to a limited extent, of their character, uses, and occupants.

The City Hall, fronting on School Street, is the most elaborate municipal structure in Boston. It is a very handsome and imposing building, and is well adapted to the uses for which it was built. The style of architecture is the Italian Renaissance, modified and elaborated by the taste of the French architects of the last thirty years. The building cost over \$500,000, including the furniture and plans for same. The faces of the front and west sides are of white Concord granite; those of the Court-square and City-Hall Avenue façades are of stone from the old City Hall, which stood on the same spot. There is a large turfed yard in front, in which stands, on one side, the bronze statue of Franklin by Richard S. Greenough, erected in 1856; and, on the other, Thomas Ball's bronze statue of Josiah Quincy, one of the earliest and most energetic mayors of Boston, which was placed in its position Sept. 17, 1879.

The first, second, and third stories and the basement of the City Hall are fireproof. The floors of the fourth, fifth, and attic stories are of burnetized timber. The roof is of wood, covered with copper and slate. The interior finish is principally of butternut and pine. The main entrance communicates with the first-story hall, which is paved with squares of black and white marble. Thence the fine, broad staircases or the elevator conduct the visitor to the upper stories. The staircases are of iron, with face stringers, newels, rails, and balusters of oak. In the wall of the first landing is a tablet of Sienna and white marble bearing this inscription: —

In the basement are the offices of the lamp department, the inspector of buildings, the board of health, the city physician, and the superintendent of health, besides some police-cells. On the first story are the offices of the city treasurer, city collector, auditor of accounts, water-registrar, superintendent of police, and the assessors. On the second story is the room of the board of aldermen. It is 44 feet square, 26 feet high, well lighted and tastefully ornamented. Near by is a lobby with cloak-rooms. On the same floor are the offices of the mayor, the city clerk,¹ the city messenger, the clerk of committees, the superintendent of public buildings, superintendent of public lands, the city registrar, and a large committee-room. On the third story are the offices of the superintendent of streets, the superintendent of sewers, the board of fire-commissioners, the chief engineer of the fire-department, the superintendent of printing, the board of street-commissioners, and the city surveyor. On the fourth story is the common-council chamber, 44 by 44 feet, 27 feet high, with galleries on three sides, and seats for 250 persons. Adjacent are dressing and committee rooms; and on the same floor are the offices of the clerk of the council, the

¹ It is certainly an interesting fact, that since Boston became a city there have been only two city clerks, — the first, S. F. McCleary, sen., serving for 30 consecutive years; and the second, his son, S. F. McCleary, jun., serving for the past 30 years.

BOSTON CITY HALL, SCHOOL STREET.

city engineer, and the water-board. On the fifth story is the city architect's department, and several store-rooms and watchmen's rooms. The attic, under the dome, contains the operating-room of the magnetic fire-alarm telegraph, whence alarms are sent out over the wires communicating with all the public bells and engine-houses. Near by are sleeping-rooms and a library for the operators. Above, in the dome itself, is the battery-room, 13 by 41 feet in dimensions. The dome is surmounted by a balcony, from which rises a flag-staff 200 feet from the ground. Four lions' heads look out from the corners of the balcony, and a gilded eagle surmounts the centre of its front.

The legislative power is vested in the mayor, 12 aldermen chosen from the city at large, and 72 common councilmen chosen by the 25 wards. The executive power is vested in the mayor and aldermen. The term of office of the mayor, aldermen, and councilmen is one year; and the election occurs annually on the Tuesday after the second Monday of December. The departments are severally designated, the assessors', financial, health, registrar's, water, fire, and police departments. The mayor receives a salary of \$5,000 a year; the city and county treasurer, \$5,000; the collector, \$4,000; the auditor, \$5,000; the three members of the board of health, \$3,000 each; the city physician, \$2,700, with \$1,100 for his assistant, \$900 for the port physician, and \$850 for his assistant; the superintendent of health, \$3,000 and horse and carriage; the city registrar, whose main duty is to keep the record of births, marriages, and deaths, and grant certificates of intention of marriage, \$2,500; the three water-commissioners, \$3,000 each; the city engineer, \$4,500; the resident engineer of the Sudbury-river water-works, \$4,000, with \$2,800 for the water-registrar, \$3,000 for the superintendent of the eastern division, and \$2,700 for the superintendent of the western; water-registrar Mystic water-works, \$2,250, superintendent, \$1,600, and engineer, \$1,200; the three fire-commissioners, \$3,000 each; chief engineer of the fire-department, \$3,000; the three police-commissioners, \$3,000 each; the city solicitor, \$6,000; and the three registrars of voters, \$2,500 each. There are many minor officials having positions in and about the City Hall, in the various city institutions, and in care of city property. The city clerk receives \$4,000 a year, and has \$11,600 a year for assistant clerks. The cost of administering the affairs of the city has grown rapidly within the past quarter of a century; and during the seven years preceding 1881 earnest efforts have been made to reduce it. The total actual expenses of the city and county in 1880-81, for the year ending April 30, were \$13,398,120.50, against \$12,200,398.20 the previous year.

The Directors for Public Institutions have charge of the House of Industry, the House of Reformation, the alms-houses situated on islands in the harbor, the House of Correction and the Lunatic Hospital at South Boston,

the Home for the Poor on Austin Farm, West-Roxbury district, almshouse in the Charlestown district, and Marcella-street (Highlands) Home for pauper and neglected boys. The superintendent of health has charge of the city stables, horses, carts, wagons, etc., necessary for the business of keeping the city streets and ways clean, collecting house-offal, etc. The Central Charity Bureau building on Chardon and Hawkins Streets, where the principal charitable societies have headquarters, and the Temporary Home at the corner of Chardon and Bowker Streets, are in charge of the Board of Overseers of the Poor. There are twenty public bath-houses, all well equipped and supplied.

The Boston fire-department is one of the most efficient in the country; and the system of its management is regarded by those well qualified to judge as admirable in every particular. The department is under the direct control of the fire-commission, consisting of three members, who are appointed by the mayor and confirmed by the city council. There is a chief engineer, ten assistant-engineers, two call-engineers, and 643 men employed in various capacities. The apparatus consists of 29 steam fire-engines, and for each a hose-carriage; 12 independent hose-carriages and companies; 7 chemical engines; 11 hook-and-ladder carriages, four of which carry portable extinguishers; and one fire-boat. Belonging to the department are 147 horses, about 70,000 feet of hose, and 1,000 feet of suction-hose. The yearly salaries of the fire-department are about \$1,000 per day. There was paid out in 1880-81, on account of the whole department, \$470,210.00, besides \$128,940 paid the water-department for water and maintenance of the hydrants. The Boston Protective Department, incorporated in 1874, is under the management of the fire-underwriters. It had previously existed as an organization supported by voluntary contributions: now, however, the money voted for its support can be collected through any of the State courts. Two wagons and five permanent men are in service at all times; and call-men, attached to each of the hook-and-ladder carriages in the suburbs, are under pay of the department. The right of way and authority to enter houses endangered by fire is given by law. The prime object of the department is to save property, but it also performs meritorious work in saving life. The president of the organization is Henry B. White, secretary of the Shoe and Leather Insurance Co.; and the treasurer is Charles E. Guild. Connected with this department there is a superintendent; and a fire-marshal, also empowered to make investigations into causes of fires under certain conditions. The magnetic fire-alarm apparatus cost over \$100,000. Boston was the first city to adopt the system. Indeed, it originated here with Dr. William F. Channing of this city and Moses G. Farmer of Salem. In 1845 Dr. Channing, in a lecture before the Smithsonian Institute, Washington, suggested the employment of the telegraph as a

means of giving alarms of fire. In 1848 the subject was brought before the Boston city government by the mayor, and some experiments tried; in 1851 \$10,000 was appropriated to test the system, and during the next year it was brought into successful operation. It has now in working order about 260 miles of wire, 266 signal-boxes in use, 53 striking-machines, 60 large gongs, 42 small gongs, 60 tappers, 15 vibrators, and other material. At various places in the city the hour of noon is struck by the fire-alarm telegraph, correct time being furnished by telegraph from the observatory of Harvard University. The superintendent of fire-alarms receives \$2,300 a year, with use of horse and carriage; there are also employed 4 operators and 3 repairers, at \$3.75 a day. A constant watch night and day is kept by the operators at the chief office, in the dome of the City Hall. The waterfront is protected by a steam fire-boat, constructed of iron, supplied with four steam-pumps, high-pressure boiler, and an 80-horse-power engine, capable of playing eight streams of water at one time. A self-sustaining aerial ladder, consisting of 8 sections, each 12 feet long, was purchased in 1876. These sections can be joined and the ladder raised in 6 minutes.

The police-department, since 1878, is under the control of three commissioners, each appointed for three years by the mayor, with the approval of the city council. The police-force, and the salaries paid, are as follows: Superintendent of police, \$3,000 a year; deputy superintendent, \$2,300 a year; chief inspector, \$4 a day; 15 captains, \$4 a day each; 10 inspectors, \$3.50 a day each; 30 lieutenants, \$3.50 a day each; 37 sergeants, \$3.25 a day each; and 611 patrolmen, \$3 a day each. These, and the officers connected with the local houses of detention and the public buildings, make the whole police-force comprise 752 men. There are 15 divisions in the city, each having its own station-house. The 16th division includes the harbor, and has charge of the steamboat "Protector," with its men and rowboats. The cost of the police-department, and the charges made against it, amounted, in the year 1880-81, to \$857,048. The police-commissioners are Henry Walker, Edward J. Jones, and Thomas J. Gargan; and the superintendent of police is Samuel G. Adams.

The system for supplying the city with water is elaborate, and the water-works form one of the most interesting features. One of the advantages of the peninsula which attracted the early settlers was its abundance of pure water: the Indian name, Shawmut, it is said signifies "Living Fountains." But early in its history the wants of the town had increased beyond its internal resources. As early as 1795 a company was incorporated to introduce water from Jamaica Pond. In 1845 this company had laid about 15 miles of pipe, conveying water to nearly 3,000 of the 10,370 houses the city then contained. Pipes were at first of pine logs. The elevation of this pond, however, was too low to bring the water into the higher portions of

1. Gate-House, Chestnut Hill. 2. Waban Bridge, Needham. 3. Gate-House, Parker Hill. 4. Charles-river Bridge, Newton Upper Falls. 5. Chestnut-hill Reservoir.

THE BOSTON WATER-WORKS.

the city; and its capacity was not sufficient for the portions it did reach. For many years the subject of a better supply had been agitated; and at length, in the year 1845, Long Pond, or Lake Cochituate as it was afterwards called, situated in the towns of Framingham, Natick, and Wayland, about twenty miles west from the city proper, was selected. In August of the next year ground was formally broken for the new works, by John Quincy Adams and Josiah Quincy, jun.; and in 1848 the work was completed. But the growth of the city was so great, that in less than twenty years the source was insufficient; and the waters of Sudbury River have been made tributary, the city having been given the necessary authority in 1872. The extreme length of Lake Cochituate, in a direct line, is three and a half miles; and the breadth of the widest part is about 1,800 feet, with a water-surface of 800 acres at high-water mark. In addition to the supply in the lake, "Dug Pond" containing $44\frac{1}{2}$ acres, and "Dudley Pond" containing 81 acres, are connected with and form important tributaries to it. The whole circuit of the lake, measuring at its verge when within two feet of high-water mark, is about 16 miles; and the city owns an average width of five rods around it which is held free from taxation, also one and a quarter acres at the outlet of Dudley Pond; the whole line of the water-works extending from Lake Cochituate, and continuing through a brick aqueduct, iron pipes, and stone tunnel, $14\frac{1}{8}$ miles, to a reservoir in Brookline of about 23 acres of water-surface, and 119,583,960 gallons capacity. The Brookline reservoir is a beautiful structure of irregular, elliptical shape. Another receiving reservoir—Chestnut Hill—is situated in the Brighton district, a very extensive and attractive work. Its construction was begun in 1865; and the city became possessed of $212\frac{3}{4}$ acres of land, costing about \$120,000, before it was finished. It is $5\frac{1}{2}$ miles from the City Hall, and one mile from the Brookline reservoir. It is, in fact, a double reservoir, divided by a water-tight dam into two basins of irregular shape. Their capacity is 730,000,000 gallons, and their water-surface $123\frac{1}{8}$ acres. A magnificent driveway, varying from 60 to 80 feet in width, surrounds the entire work: in some parts the road runs quite close to the embankment, separated from it by only a smooth gravelled walk, with green turf on either side.

The high-service pumping-works are situated in the Roxbury district. The Parker-hill reservoir, on Parker Hill, built especially for the high-service supply, will hold 7,200,000 gallons above a plane $2\frac{1}{2}$ feet above the bottom of the outflow pipe. The area of the water-surface when at high-water mark is 64,033 square feet, and its elevation 219 feet above tide-marsh level. The Beacon-hill reservoir, originally built as a distributing reservoir, is now, owing to the connection of the Beacon-hill district with the high-service works on Parker Hill, abandoned, and will probably, in a few years, become the site of a court-house or some other public building. It is on high ground

situated near the State House, between Temple and Hancock Streets, and extends from Derne Street on the north to the rear of Mt. Vernon Street on the south. It is built in the most massive style of stone masonry, and is the most costly distributing reservoir owned by the city. It covers about 37,012 square feet of land, and had a mean horizontal water-section of 28,014 square feet, and a capacity of 2,678,961 gallons. The South-Boston reservoir, on the east side of Telegraph Hill, South Boston, covers, with its embankments, an area of about 126,000 square feet. It resembles in shape the segment of an ellipse, and has a water-area, when at high-water mark, of 70,041 square feet, and a capacity of 7,508,246 gallons. This reservoir is now used in the same manner as the Beacon-hill, and for similar reasons. The East-Boston reservoir, on Eagle Hill, East Boston, has a water-area, when at high-water mark, of 44,100 square feet, and a capacity of 5,591,816 gallons:

The supply from Lake Cochituate having become inadequate to the wants of the city, an act was passed by the legislature, approved April 8, 1872, authorizing the taking of the water of Sudbury River, and the construction of suitable reservoirs and aqueducts. This work is now practically completed. The river above the point where the water is taken has a watershed of about 75 miles. Three dams on the river form storage basins, having a capacity of 1,877,000,000 gallons. From the lower basin a brick conduit, 4,170 feet long, conveys the water to Farm Pond in Framingham, whence another brick conduit, 7 feet 8 inches by 9 feet, having a capacity of 70,000,000 gallons per day, conveys the water to Chestnut-hill reservoir, — a distance of about 16 miles. The main pipes leading from the several receiving reservoirs to the city, and the distributing-pipes laid in the city proper, East and South Boston, the Highlands, Dorchester, West Roxbury, and Brighton districts, aggregate in length 335 miles, varying in size from three inches to forty-eight inches in diameter. The gross expenditure on account of the Cochituate and Sudbury-river water-works to the city, up to the 30th April, 1878, was \$32,210,812.35; and the net cost, less the revenue, is \$15,068,924.88. The cost of construction alone was about \$17,000,000.

Through annexation with Charlestown, the city became possessed of the "Mystic Water-works." Mystic Lake, which is the source of supply, is situated in the towns of Medford, Arlington, and Winchester, $6\frac{1}{2}$ miles from Charlestown Square. It has an area of about 200 acres, when flowed to the level authorized by the act to take water, and a storage capacity, at that level, of 380,000,000 gallons of water. The area of country forming the drainage basin is 27.75 square miles. The conduit is 7,453 feet long. The reservoir is on Walnut Hill, in Medford, near Tufts College. Its water-surface covers an area of $4\frac{1}{2}$ acres; being nearly a parallelogram in shape, with a length of 560 feet and a width of 350 feet. It is 25 feet in

depth, the top line of bank being three feet above high-water mark. At this level its capacity is 26,244,415 gallons. The top water-line is 147 feet above high-water level of the harbor. The embankments are laid out with a concrete walk. A roadway passes around three sides of the reservoir, at the foot of the embankment; and the grounds about it are handsomely laid out. Besides supplying the Charlestown district, the cities of Somerville and Chelsea, East Boston, and the town of Everett, are also supplied from the Mystic works. The whole construction account of the works was \$1,460,000; and, in making up the account, interest on all the money used was charged by the city of Charlestown. The daily consumption of water in the city is 22,000,000 gallons from the Cochituate works, and 8,000,000 gallons from the Mystic-river works.

The United States Post-office and Sub-treasury building, when completed, will be by far the most imposing public edifice in New England. It will occupy the square bounded by Water, Devonshire, and Milk Streets, and Post-office Square, fronting on the latter. Our frontispiece shows the Post-office-square front as it will appear when completed. The portion now finished, and which has been occupied since the early part of 1875, is less than half the entire structure.

Efforts to secure a proper post-office building for Boston were begun as long ago as President Fillmore's administration; but they were not successful until 1867, when a joint resolution of Congress, appointing a commission to select a site for a post-office building in Boston, was approved by the President. A year later a site was accepted, and an appropriation made for the purchase of the land; and another year later ground was broken, and the work begun. The celebration of the laying of the corner-stone was not until the first part of the building had been nearly finished to the top of the street story. This was on the 16th of October, 1871. A distinguished company was present, including President Grant and his cabinet; and the occasion was observed as a general holiday. There was a great military and Masonic procession. The ceremony of laying the stone was performed by William Sewall Gardner, grand master of the grand lodge of Massachusetts; an oration was delivered by Postmaster-General Creswell, and an historical address was made by Nathaniel B. Shurtleff. On the 9th of November, 1872, the building was ready for the roof, when the Great Fire came. By this it was damaged to the extent of \$175,000, the loss on granite alone being \$98,000. Two of the pavilions on the Water and Milk Street sides were so defaced and chipped by the intense heat that it was necessary to replace them; and the marks of the fire are yet visible on plinths on both these sides.

The building is in the Renaissance style of architecture, and of Cape Ann granite. The Devonshire-street front is 200 feet long. The exterior façades on the three streets reach an average height above the sidewalks of

100 feet, the central portion of each reaching a height of 126 feet. The street story of 28 feet, formed by a composition of pilasters and columns resting on heavy plinths at the sidewalk level, and crowned with an entablature, carries two stories above it, adorned by ornate windows. The roof is a solid and ambitious affair of iron, slated, upon iron girders, and presents circular dormer windows, in iron frames. The Devonshire façade is subdivided into five compartments by a central projection, flanked by two curtains finishing at the corners of Water and Milk Streets; and the central portion is ornamented with an heraldic figure, an eagle with outspread wings, grasping in its talons a shield.

The post-office occupies the entire ground floor and the basement. There is a continuous passage-way across the rear, or east side, from Milk to Water Street, with a court-yard for the convenient delivery and receipt of mails from the postal wagons. The basement story has a clear height of 14 feet, and is extended beneath the sidewalk of all three of the thoroughfares surrounding the present edifice. The central portion of the first story, 81 by 43 feet, is for the post-office proper, and is connected with the rear court-yard, and lighted from it. All the work is transacted in one grand spacious apartment, directly under the eye of the various superintendents. This work-hall is 30 feet in height, and 216 by 82 feet in floor area, and is surrounded on three of its sides by a public corridor, from which it is separated by the post-office screen, which contains the box and other deliveries, and registry. Surmounting the screen, and covering the corridor, is a mezzanine flooring, or gallery, 12 feet wide, opening into the grand work-hall. This is enclosed by a metal balcony railing, and is reached from the floor of the hall by two flights of stairs. In this gallery are offices, and the letter-carriers' department. The postmaster's and cashier's rooms are in the second story. The apartments of the sub-treasury occupy the larger portion of the second story. "The Marble Cash-room" is in the centre, and is a very showy hall, forming a parallelogram of about 80 feet in length, 40 in width, and about 60 in height: its decoration is in the Grecian style which characterizes the entire building. The tall pilasters, running 13 feet high, are mounted on solid bases, and topped with elaborate worked capitals all of Sicilian marble, while the wall-slabbing above and below is of the dark and light shades of Sienna. The cornices resting on these capitals are of highly enriched frieze, with a double row of brackets, and richly ornamented. A gallery, or balcony, surrounds the four sides of the room, accessible from the staircase, hall, and corridor of the third story. The doors and window-sashes are of solid mahogany. Connected with the cash-room are the four fire and burglar proof safes. There are also on this floor eight apartments for the sole use of the sub-treasury. In other portions of the upper stories are the pension and internal-revenue offices. In the basement is the money-order depart-

ment. The tiled halls and corridors on these floors are broad and lofty, and the stairways are spacious and easy.

The completion of the building by the erection of the second section has been delayed by the difficulties encountered in gaining possession of the land. Congress agreed to make an additional appropriation of \$750,000, on condition that the streets surrounding the building should be widened,—for which the fire had somewhat paved the way,—both to improve the appearance of the building and to give additional protection against fire. This widening was strenuously opposed by certain property-owners. The necessary legislation, however, was secured, and the appropriation made. Then another serious obstacle appeared. The owners of the land set such a high price upon it that it could not be considered. At length the courts were appealed to; and the price awarded, though considered high, was accepted, and the work of building the second portion was begun. It is now progressing rapidly. When completed, the post-office work-room will be extended, covering the basement and street floor of the entire building, the court-yard being covered and separating the two wings; the postmaster's room will be removed to the street floor on the Post-office Square front; and the money-order department, now crowded into a rather dark corner on the Milk-street side, will have well-lighted and spacious quarters on the corner of Post-office Square and Milk Street. The United States court-rooms and offices will be on the second floor of the new wing; and the internal-revenue department will be moved from the present wing into the new.

The cost of the entire work when the extension is completed, it is estimated, will be between five and six millions. Up to July 1, 1881, about \$4,500,000 had been expended. The sum included the cost of the land, which was \$865,000: the portion for the extension over which there was so much controversy, settled finally by the Supreme Court, cost about \$411,000.

The present is the first post-office building in the city owned by the government. For most of the time previous to the Revolution the office was in that part of Washington Street formerly known as Cornhill, between Water Street and the present Cornhill. During the siege of Boston the post-office was removed to Cambridge. After the evacuation by the British, the office was returned to the east side of Washington Street, near State. Later it was removed to State Street, in a building originally the site of the first meeting-house erected in Boston. It was moved several times during the next thirty years, tarrying for a while in the Old State House, and bringing up finally in the Merchants' Exchange building on State Street, where it was burnt out in the Great Fire, though all the valuable matter was safely removed. A resting-place was found in Faneuil Hall; and a few weeks afterwards the Old South Church was re-arranged, and here the post-office remained until the completion of the present building.

During the Revolution, Tuthill Hubbard was postmaster of Boston, under Benjamin Franklin and John Foxcroft, who were the last deputy postmasters for North America under foreign appointment. Hubbard was succeeded by Jonathan Hastings, who remained in office until 1809. Other postmasters were. Aaron Hill, appointed in 1809; Nathaniel Greene, 1829; William Hayden, 1849; George W. Gordon, 1852; Edwin C. Bailey, 1854; Nahum Capen, 1858; John G. Palfrey, 1861; William L. Burt, 1867; and Edward S. Tobey, 1876, who is the present incumbent. The following statistics for the year 1880 show the business conducted at the post-office: Letters delivered by carriers, 18,211,005; postal cards, 6,936,428; newspapers, etc., 8,498,387: total, 53,645,820. Letters collected, 19,390,079; postal cards, 5,605,802; newspapers, etc., 3,636,603: total, 28,632,484. During 1880 the volume of mail-matter handled was 25 per cent in excess of any previous year.

The United States Court House, corner of Tremont Street and Temple Place, looks more like a church than a court-house. It was, in fact, built for a Masonic Temple in 1832. The walls are of Quincy granite; and there are two towers 16 feet square and 95 feet high, surmounted by battlements and pinnacles. There are five stories, and the rooms are lighted by long arched windows. A view of this building is shown in connection with St. Paul's Church, in the chapter on "The Soul of the City."

The United States Navy Yard, in the Bunker-hill district, is on the point of land formerly known as Morton's Point, at the junction of the Charles and Mystic Rivers. It comprises over eighty acres of land, and is enclosed on the land side by a high stone wall. On the water-front are several wharves and a substantial sea-wall. The granite dry-dock, 341 feet long, 80 feet wide, and 30 feet deep, which was opened in 1833, and cost over \$677,000, is worthy of notice. The first vessel docked here was the old frigate "Constitution." There is a quaint museum called the "Naval Library and Institute," a granite rope-walk 1,361 feet long, machine-shops capable of giving employment to about 2,000 men, buildings for the storage of timber and naval stores, ship-houses, marine barracks, a magazine and arsenal, a parade-ground, parks for cannon and shot, and dwelling-houses for the commandant and various officers of the yard. Passes are issued to visitors on application at the gate. The yard was established by the government in 1800, when the land cost only \$40,000. Several large vessels of the old navy were built here, including the "Vermont," "Virginia," "Independence," and "Cumberland."

The Boston State House, "the hub of the solar system" according to Dr. Holmes, stands on the summit of Beacon Hill, the most commanding situation in the city, on a lot which was formerly Gov. Hancock's cow-pasture, bounded now by Beacon Street on the south, Mount Vernon Street on the east and

north, and Hancock Avenue on the west. The corner-stone was laid in 1795, and the oration was delivered by Gov. Samuel Adams. The customary Masonic ceremonies were conducted by Paul Revere, grand master. The original cost of the building was over \$133,000, but several expensive additions and improvements have since been made. The south side was added in 1852; and the dome was gilded in 1874, producing a fine effect. The building was

The State House, Beacon Street.

first occupied by the "Great and General Court" in 1798, when the Old State House was abandoned. The building is oblong, measuring 173 by 61 feet. Its height, including the dome, is 110 feet, and the lantern is about 220 feet above the sea-level. Bronze statues of Horace Mann by Emma Stebbins, and of Daniel Webster by Hiram Powers, and two fountains, ornament the turfed terrace in front of the building. The main entrance is reached by

a succession of stone terraces from Beacon Street, and leads into the Doric Hall. This hall contains the remnants of the flags carried by Massachusetts soldiers in the civil war. Here also are exhibited copies of the memorial tablets of the Washington family in England, given to the State by Charles Sumner; tablets taken from the old Revolutionary monument that stood on Beacon Hill before the State House was built; and guns that formerly belonged to the Concord minute-men, recalling the days of 1775. Thomas Ball's marble statue of Gov. John A. Andrew is considered a work of great artistic merit; and Chantrey's statue of Washington, wrapped in a military cloak, should be noticed. In Doric Hall are also busts of Samuel Adams, Abraham Lincoln, Charles Sumner, and Henry Wilson. The Hall of Representatives, in the centre of the building, is the largest room in the State House, and accommodates 500 members. Visitors are admitted to the gallery during the sessions. The ancient codfish still hangs from the centre of the ceiling, an emblem of the bygone importance of the cod to the State, "which has been," says Drake, "a greater source of wealth than the mines of California." The same fish hung in the old hall in State Street, but was taken down, and not restored till after the peace, when it was again and has ever since been displayed before the assembled wisdom of the Commonwealth. The Senate Chamber is at the east end of the building, and is 60 by 50 feet. It contains some portraits of dignitaries and a few relics. At the west end of the building is a large room for the meetings of the governor and council, and the offices of the governor and other State officers. On the north side, in the fireproof addition, is the State library, 88 by 37 feet in dimensions, 36½ feet high, with galleries and alcoves, and containing over 40,000 volumes. This portion of the Capitol also contains various committee rooms; and the fireproof rooms in the basement are devoted to the preservation of State archives. There is a very complete agricultural library; and the State cabinet contains some valuable specimens of rocks, minerals, and fossils, birds, animals, insects, and shells. For the sake of the view, which is very extensive, and gives a good general idea of the topography of the city, visitors to the number of about 50,000 per annum climb the 170 steps leading to the cupola that surmounts the gilded dome, which rises 30 feet from its pediment, and is 50 feet in diameter. The cupola is free to visitors when the legislature is not in session; and below there is a register wherein strangers should enter their names.

The Old State House, at the head of State Street, although standing, has been altered so much that only an indication of the original appearance is left. Like the Old South Church, and the half-dozen other old historic landmarks, it is threatened by the march of business.

Few Bostonians know how many stirring associations are connected with this ancient edifice, which was built in 1748 to replace its burned predeces-

sor. The site was that of the earliest market-place of the town. The first wooden Town House was built here in 1657, burned in 1711, rebuilt a year later, and again burned in 1747. It was after the Revolution that the present building became the quarters of the General Court of the Commonwealth, as well as of the town officials. After the town became a city, the Old State House became also the City Hall. It was damaged by fire in 1832. In 1798 the legislature moved to the New State House on Beacon Hill. It has not only been the Town House, City Hall, and State House, but also the quarters of the courts and the legislature of the Colony and of the Provincial council. It was in 1768 a barrack for British troops, in 1838 the United States Post-office, and for many years the Merchants' Exchange. The convention that ratified the United States Constitution met here before adjourning to the Federal-street Church. The Boston Massacre occurred in front of its doors. In the Old State House, according to Samuel Adams, "Independence was born." The news of the death of George II. and the accession of George III., and in 1776 the Declaration of Independence, were read from the balcony. During the stamp-act excitement the mob burned stamped clearances in front of the building. Gens. Howe, Clinton, and Gage held a council of war in the building before the battle of Bunker Hill. In 1778 the Count d'Estaing was here received by Gov. Hancock; here the constitution of the State was planned; from the balcony, in 1789, Washington received an ovation from the people, and reviewed a long procession. The steeple, or tower, was formerly higher than it is at present; and where the clock now is, on the east front, was once a sun-dial. At each end of the edifice were carved figures of the lion and the unicorn. In the 17th century the whipping-post and the stocks were near by. For many years the building has been used for business purposes, and now contains the offices of many firms: among those on the easterly front are the offices of the Springfield Fire and Marine Insurance Co. of Springfield, Mass.; the Meriden Fire Insurance Co. of Meriden, Conn.; and the Security Insurance Co. of New Haven, Conn. The Springfield, which has had its branch office in the Old State House for the past 30 years, has suffered severely by the great conflagrations at Troy, Portland, Me., Chicago, and Boston. Its losses have always been promptly paid, and to-day its gross assets exceed in amount those of any other company chartered by our own Commonwealth. The Meriden in 1878 added \$100,000 to its capital. The Security, since its incorporation in 1841, has been a successful company. Reed & Brother are the only representatives that these companies have had in this city. On the same front is the office of the Continental Insurance Co. of New York, one of the strongest fire-insurance companies in the United States. Incorporated in 1852 with a cash capital of \$500,000, it has prospered until to-day its gross assets are over \$3,000,000.

THE OLD STATE HOUSE, AT THE HEAD OF STATE STREET.

From the "Boston Traveller."

The Continental paid for losses \$500,000 in the Boston fire, and \$1,750,000 in the Chicago fire. This company was the first to submit to the provisions of the New-York Surplus Law, and now applies all its profits to increase its surplus. In the same office with the Continental is the Howard Insurance Co. of New York, organized in 1825. Both companies are managed in this city by Albert Bowker, the president of the North-American Insurance Co. of Boston. These three companies, with aggregate assets exceeding \$4,000,000, have had a local patronage of the choicest and most profitable kind, extending over a period of from a quarter to a half century each. The office of Mr. Bowker has been in the Old State House for the past 28 years. On the Washington-street front is the office of the Fall-River line, the proprietors of the "Bristol" and "Providence,"—the finest side-wheel steamers afloat.

The Custom House, at the corner of State and India Streets, is a huge granite building in the form of a Greek cross, in the Doric style of architecture, which was begun in 1837 and finished in 1847. It is 140 feet long, 75

The Custom House, State Street.

feet wide at the ends, and 95 feet through the centre, and rests upon 3,000 piles, over which a platform of granite 18 inches thick is laid in hydraulic cement. The structure cost the United States government over \$1,000,000. A flat dome, with a skylight 25 feet in diameter, surmounts the building, and is 95 feet from the floor. 32 fluted granite columns, weighing 42 tons each, surround the

edifice. The roof and dome are covered with wrought granite tiles. The main floor is occupied by the offices of the collector, deputy-collectors, and various clerks employed in the customs service. There is a large rotunda, 63 by 59 feet in dimensions, and 62 feet high, in the Grecian Corinthian style. The ceiling is supported by 12 marble columns, 3 feet in diameter and 29 feet high. On the entrance-floor are the offices of the naval officer, surveyor, cashier, and a deputy-collector having in charge the entrance, clearance, and register of vessels, etc. There is also a large hall in the centre of this floor. The cellar is used for the storage of goods. The building is fireproof throughout.

The County Court House, fronting on Court Street, stands by itself; the avenues along its sides, and in the rear, being known as Court Square. It is a solid, gloomy-looking, granite building. It was completed in 1836, and cost about \$180,000. It is 176 by 54 feet, and has three stories and a basement. The Court-street front has a Doric portico, supported by four columns of fluted granite weighing 25 tons each. Many of the county and city courts are held here, such as the supreme judicial court, the superior court, the court for juvenile offenders, and the municipal court. On the second floor is the Social Law Library, referred to in the chapter on libraries. In the basement is the city "lock-up" for temporary accommodation of prisoners. In the autumn of 1878 steps were taken by the city government towards building a new court-house.

The Jail for the County of Suffolk, on Charles Street, near the foot of Cambridge Street, presents an imposing appearance, especially to one approaching the city by the Cambridge, or West-Boston Bridge. It was completed in 1851, and cost more than \$500,000. It consists of a centre octagonal building, with four wings radiating from the centre. Three of these wings enclose the cells of the prison, and the other is occupied as the sheriff's residence and offices. The exterior is of Quincy granite. The jail is in charge of Sheriff John M. Clark.

The Probate Office was in a plain brick building, now occupied by the probate court, on the west side of Court Square, close to the City Hall. In 1872 the quarters were removed to the lower floor of the new fireproof building of the Massachusetts Historical Society, thus giving them an entrance at 32 Tremont Street. The probate office was established in 1636. The first year there were 2 cases, and the second year 5. There were 69 in the year 1700, and 166 in the year 1800. There are now about 1,500 new cases a year; and since the establishment of the office there have been 62,500 cases. It is estimated that the entire wealth of Boston passes through the office about once in thirty years. Since Sept. 1, 1878, the business of the insolvency court has been done in connection with the probate court, the repeal of the United States bankruptcy laws reviving the old insolvency laws of the State. The judge of probate and insolvency is John W. McKim, who was appointed in March, 1877. The register of probate and insolvency is Elijah George, who has held the office since April 3, 1877. The assistant register is John H. Paine; and the clerk of register James L. Crombie. The judge of probate and insolvency is appointed by the governor. The register of probate and insolvency is elected by the people to serve for five years.

The Registry of Deeds for Suffolk County is on the floor above the probate court and probate office. The whole number of instruments recorded in the year ending Oct. 1, 1878, was 19,371. Of these, 12,618 were

deeds, and 6,753 related to various other matters connected with real estate. The total number of pages occupied by these documents was 56,396. The register of deeds is Thomas F. Temple.

The **Correctional Institutions** are conspicuous objects on Deer and Rainsford Islands, in the harbor. The House of Industry is a large brick building, well arranged for the purpose for which it was built. The House of Reformation for Girls, near by, is of wood; and there is also, in the group, a brick schoolhouse for truant boys, a brick workshop and receiving-house, and other buildings. The pauper institutions—different buildings for males, women, and girls—are also on these islands. The House of Correction at South Boston is an elaborate building, thoroughly equipped, and has a steam-engine of twenty-horse power in its workshop; and adjoining the House of Correction is a Lunatic Hospital. For the year ending April 30, 1881, the cost of the House of Industry was \$147,561, and its income \$12,137; cost of the House of Correction, \$78,278, and income \$51,866; and cost of the Lunatic Hospital, \$44,736, and income \$3,923.

The forts in the harbor, the property of the United States government, are three in number:—

Fort Warren is the lowest fort in the harbor, situated at its entrance, on George's Island. It has been built since 1850. Its stone work is of granite, and it has a comely and substantial appearance. During the war of the Rebellion it was especially used for the confinement of Confederate prisoners. Among the most distinguished of the latter were Mason and Slidell, the Confederate commissioners to England, captured on board "The Trent" by Commodore Wilkes.

Fort Independence is on Castle Island, nearer the city, almost opposite South-Boston Point. This island has been fortified since 1634. Castle William, which stood here when the Revolution broke out, was fired by the retiring British, on the evacuation of Boston, and entirely destroyed. The name Fort Independence was given to the fortifications here in 1798.

Fort Winthrop is on Governor's Island, opposite Fort Independence. It is but partly built, work having been suspended while Jefferson Davis was secretary of war, before the breaking-out of the Rebellion. It was intended to be the strongest fortification in the harbor. The island was sold to the government in 1808, to be fortified; and the first fortification here was called Fort Warren.

The Lungs of the City.

BOSTON COMMON, PUBLIC GARDEN, PARKS, SQUARES, MONUMENTS, STATUES, AND FOUNTAINS.

THE need of a grand public park, or series of parks, of generous proportions and on an elaborate scale, has long been felt; and the question of establishing such parks has been agitated for several years. In 1869 the subject was brought formally before the city government, but no action reached. Feb. 17, 1874, a commission, consisting of the mayor, two aldermen, three councilmen, and three citizens at large, was appointed to consider the question; and on the 25th of November they reported in favor of laying out a park in some part of the territory between Arlington Street and Parker's Hill, in the Roxbury district, and also of a series of parks of moderate size between the third and fourth mile circles of the city. On this report no action was taken by the city council, owing to the lateness of the season. The next year an act was obtained from the Legislature, granting the city leave to purchase land for a park or parks. This act was accepted by the people; and three commissioners were appointed to locate, under certain conditions, one or more parks. This commission simply recommended a series of parks in different sections of the city, to be connected by a park road. Owing to the depression in business, nothing further was done in the matter until 1877, when the city council authorized the Park Commissioners, under whose charge all the city parks and public grounds will probably be placed, to purchase not less than one hundred acres of land or flats in the Back-bay district, at a cost of not over ten cents a foot, for the establishment of a public park. At the same time a loan of \$450,000 was authorized to meet the purchases. In February, 1878, the commissioners were authorized to make further expenditures for the same park; \$16,000 more being appropriated for land, and \$25,000 for filling, grading, surveying, and laying out. The park will be bounded on all sides by public avenues, and will occupy a portion of the area between Beacon Street, Brookline Avenue, Longwood Avenue, and Parker Street, with entrances from each. The beginning of this park is regarded as a long stride towards the much-desired series of magnificent parks, which will add greatly to the beauty, health, and enjoyment of an already beautiful and healthful metropolis. The next move, it is expected, will be the improvement of the strip of flats known as the Charles-river embankment, begin-

ning from Leverett Street, and extending along the border of Charles River to Cottage-Farm Station, a distance of nearly $2\frac{3}{4}$ miles, with an average width of 200 feet. An act was passed by the Legislature of 1881 enabling the city to take this land for park purposes. It is proposed to utilize the stone in the abandoned Beacon-hill reservoir in building a large portion of the sea-wall of the embankment. The plans contemplate a beautiful riverside resort, which will add much toward making Boston what it is fast coming to be, the most attractive city on this continent. In the summer of 1881 the city council was recommended to authorize a loan of \$1,500,000, the proceeds to be devoted to the carrying-out of the several park schemes, exclusive of the Back-bay park, under consideration since the establishment of the Park Commission in 1875. These are the West-Roxbury, City-Point, Brighton, and East-Boston parks, the Muddy-river improvement, the Charles-river embankment, and the Arnold Arboretum. Of the several schemes the West-Roxbury park is the most extensive. The chosen site for this park is one of the most picturesque within the city limits. Its features are a gentle valley, nearly a mile in length and of an average breadth, between the steeper slopes of the bordering hills of less than a quarter of a mile. It is in many respects a remarkable expanse of tranquil, park-like, natural scenery. Of the proceeds from the loan of \$1,500,000, it is proposed to set aside \$600,000 for the purchase and development of this tract. The next in importance is the proposed marine park at City Point, South Boston, which is regarded as the most eligible position in the harbor for a waterfront esplanade. For the Brighton park it is proposed to take a tract of 180 acres, to be connected with the driveway about the Chestnut-hill reservoir and the general park system; and for East Boston a tract of 50 acres, to be located by the Park Commissioners. The proposed Muddy-river improvement is along the line of that river, partly within the limits of the city and the town of Brookline. It is proposed to take about 100 acres of land here, and, in improving them substantially and attractively for park purposes, abate a nuisance, and at the same time connect the Back-bay improvement appropriately with land already owned by the city on Jamaica Pond. The Arnold Arboretum scheme is for the acquisition by the city of about 120 acres of diversified land without cost; the condition being, that about 44 acres of additional land be purchased at a cost of about \$50,000. All of this the city of Boston is to control. About two-thirds will be absolutely free to the public, and the other third as free as the Public Garden now is; that is, it will be under cultivation by Harvard College between the drives and walks. It will be a beautiful supplement to the park system. This tract of land lies within a mile of the site of the proposed West-Roxbury park, and it is proposed to make a road through it to connect with the roads of the latter and larger grounds.

The Park Commissioners are chiefly well-to-do citizens: this year they include Charles H. Dalton (chairman), William Gray, jun. (secretary), and Henry Lee. Their clerk is George F. Clarke, and their office is room 39, New-England Life Insurance building.

The Boston Common, of which the people of Boston are justly proud, is a natural park, whose undulating surface, covered with green grass and shaded by over 1,000 fine old elm-trees, forms a scene of rare rural beauty in the very centre of the busy city. There is scarcely a foot of the forty-eight acres in its area that is not endeared to the Bostonian by some personal or historic association. There are five malls, or broad walks, bordered with noble trees; and these are known as the Tremont-street, Park-street, Beacon-street, Charles-street, and Boylston-street malls. The Beacon-street mall is the most beautiful. The entire Common is surrounded by an iron fence, 5,932 feet in length. On the Tremont-street side there is a low iron fence, with numerous entrances. The objects of special interest in the

Common are numerous. On Flag-staff Hill is the great Soldiers' and Sailors' Monument, described in this chapter. Near the Park-street mall is the Brewer Fountain, which was presented to the city by the late Gardner Brewer. It was cast in Paris, and is a bronze copy of a fountain designed by Liénard of that city. At the base there are figures representing Neptune and Amphitrite, Acis and Galatea. The

From "Harper's Weekly."

The Frog Pond, Boston Common.

Frog Pond, a picturesque sheet of water near Flag-staff Hill, adds much to the beauty of the Common. On special occasions a fine jet of water is made to play near the east end of the pond. Near the Boylston-street mall is a deer-park, enclosed by a high wire grating, where a con-

1. Central Burying Ground. 2. Old Elm Enclosure. 3. Deer Park. 4. Gardner Brewer Fountain. 5. Tremont-st. Mall. 6. Coasting. 7. Park-st. Gate.
THE BOSTON COMMON.

tented family of deer can be seen grazing. The Central burying-ground, referred to in the chapter on cemeteries, adjoins the deer-park. The portion of the Common between Flag-staff Hill and the Charles-street mall is used as a parade-ground by the State militia. It was formerly used as a play-ground for the boys. Near the "long walk" from Joy Street to Boylston Street there is a band-stand, where on summer evenings free open-air concerts are given at the city's expense. There are over 200 benches and several drinking-fountains in various parts of the grounds. During the warm weather the children find much delight in the Punch-and-Judy show, the camera obscura, etc., on the Tremont-street mall, near the West-street gate. The Old Elm which stood near the "long-walk," at the foot of Flag-staff Hill, was in its day considered the "oldest inhabitant" of Boston. It was a tree of unknown age, and was believed to have stood there before the settlement of the town in 1630. It was already decrepit as long ago as 1755. It was over 72 feet high, and measured $22\frac{1}{2}$ feet in circumference one foot above the ground. After resisting many a storm, it was blown down in the winter of 1876. An iron fence surrounds the spot where it stood, and where now a shoot bids fair to flourish in its place, and thus perpetuate the line of family descent. The history of Boston Common is full of interest. When the city charter was drawn up, a clause was inserted making the Common public property forever, and placing it beyond the power of the city either to sell or give away. The original use to which the land was put was for a pasture of cattle, and for a parade-ground of the military. It was called Centry Field, and in 1640 embraced the land east of Park Street as far as the Tremont House, and was bounded by the water of the Charles River, where Charles Street now is, on the west. On the Tremont-street side it extended to where Mason Street now is. Before the Revolution it was enclosed by a wooden fence. Drake, in his entertaining "Landmarks of Boston," recalls the fact that a part of the forces that captured Louisburg assembled on the Common; the troops that conquered Quebec were recruited here by Amherst; it was the mustering-place for the conflicts which ushered in the American Revolution, and the fortified camp which held the beleaguered town in subjection. It is associated with the deep horrors of the witchcraft executions, and with the eloquence of Whitefield. From the foot of the Common the British troops embarked for Lexington the night before April 19, 1775. On the Common were arrayed the British forces engaged at Bunker Hill before they crossed the river. In the dreary winter of 1775-'76 there were over 1,700 red-coats behind their earthworks on the Common, waiting for Washington to attack the town. On Flag-staff Hill was a square redoubt; near the Frog-pond was a powder-house. Trenches were made all along the water-front, where on sunny afternoons the pensive

tramp now slumbers on the benches of the Charles-street mall. Other reminiscences of past events with which the Common is associated will readily occur to the reader. During the British occupation, Gen. Gage was successfully appealed to by the Boston boys in behalf of their right of coasting on the Common,—a right which is still enjoyed. In 1728 Henry Phillips, a nephew of Peter Faneuil, killed Benjamin Woodbridge in a duel with rapiers, near the Old Elm; the quarrel arising from a love-affair. In 1766 the repeal of the Stamp Act was brilliantly celebrated on the Common, which was also the scene of a great celebration in 1848, when the Cochituate water was first introduced into the city.

The Public Garden is an improvement of comparatively recent date, though long ago contemplated. Nearly all the work of beautifying it has been done within the past fifteen years. It was marsh-lands and flats a hundred years ago. For twenty years, from 1795 or thereabouts, the territory was occupied by five long rope-walks. The town granted the lands, rent free, to the rope-makers, after the destruction of their buildings in Pearl and Atkinson (now Congress) Streets by fire, in 1794, for two reasons,—to prevent the erection of buildings in a district they endangered, and to help the crippled proprietors. When, in 1819, these rope-walks, in turn, were burned, the holders decided not to rebuild, but to cut up the territory into building-lots, and sell it for business and dwelling purposes; its value having been greatly enhanced by the opening of Charles Street in 1804, and the Mill-dam project then under way, which, when completed, would convert the marshes and flats into dry lands. The territory then commanded a beautiful view of the Charles and its shores beyond; and the idea of transforming it into a public garden was conceived. The people strongly objected to the rope-makers' scheme, and in 1824 decided, by a popular vote, that the lands should not be sold for building purposes; and the city, by paying \$50,000, the sum awarded by referees, to whom the rope-makers' claim was referred, regained possession of the territory which the town had given away. The agitation for buildings and residences on this territory still continued, however; and it was not until 1859 that the question was settled finally, by act of the Legislature and vote of the city. The Public Garden now is one of the most attractive spots in the city. While the Common is a park of stately trees and broad walks, this is, precisely as its name indicates, a public garden, with dainty flower-beds, plants, shrubbery, grass-plats, stretches of closely-clipped lawns, and narrow winding gravel paths. In its midst is a pretty pond, irregularly laid out; and in the summer-time this is bright with gayly-canopied pleasure-boats. An iron bridge, with granite piers and imposing design, spans it; and the winding walks along its margin, and the seats under the few large trees near its brink, are much sought on pleasant afternoons. Near the central path, from the Arlington-street entrance

across the bridge to Charles Street, is the most interesting fountain in the garden. It is so arranged that it throws a fine spray over and about a small and graceful statue of Venus rising from the Sea, producing a very pleasing effect. There are also several other statues, which will be described farther on in this chapter. The area of the Public Garden is about $24\frac{1}{2}$ acres; and it is bounded by Charles, Boylston, Arlington, and Beacon Streets.

The Public Garden. View from Boylston Street.

Other Parks in the city proper are small, and are frequented chiefly by residents in their immediate neighborhood. At the South End are Franklin Square, on the east side of Washington Street, bounded by Washington, James, East Brookline, and East Newton Streets; and Blackstone Square, on the west side of Washington Street, bounded by Washington, West Brookline, West Newton Streets, and Shawmut Avenue. Both are enclosed by good iron fences, and are beautified with trees. Each has a fountain, and contains about $2\frac{2}{3}$ acres. Worcester Square, between Washington Street and Harrison Avenue, and Union Park, between Tremont Street and Shawmut Avenue, each containing over $\frac{1}{2}$ of an acre; and Chester Square, between Tremont Street and Shawmut Avenue, containing about $1\frac{1}{2}$ acres, — are modest parks, the last the most extensive and ambitious in its adornments, with roadway on each side lined with fine residences, some of them quite elegant in appearance, and costly. In the centre of

THE PUBLIC GARDEN, BOSTON.

Chester Park are a beautiful fountain and a fish-pond; and the place is much frequented by the pretty children and trim nursery-maids of the neighborhood. At the West End, on Cambridge, corner of Lynde Street, in front of the West Church, is a bit of a park, old-fashioned, with trees and shrubbery well-grown, known as Lowell Square. At the junction of Tremont,

Clarendon, and Montgomery Streets, is an open space called Montgomery Square. Throughout the length of Commonwealth Avenue will be a strip of park land, beautifully adorned with trees and shrubbery, and ornamented with statues and fountains.

In South Boston are two attractive parks, especially noteworthy for the superb views they command of the city and the harbor. One, on Telegraph Hill, is known as Thomas Park; and the other, on Broadway, Second, M, and N Streets, is called

Fountain, Blackstone Square.

Independence Square. The first contains about $4\frac{1}{3}$ acres, and the second $6\frac{1}{2}$ acres. There is also, bounded by Emerson, Fourth, and M Streets, a small park called Lincoln Square. The largest squares in East Boston are Central Square, at Meridian and Border Streets, containing $\frac{3}{4}$ of an acre; and Belmont Square, bounded by Webster, Sumner, Lamson, and Seaver Streets, of almost the same area. These are enclosed by iron fences, and their paths are well shaded. Other squares in East Boston are Putnam Square, located at Putnam, White, and Trenton Streets; Prescott Square, at Trenton, Eagle, and Prescott Streets; and Maverick Square, at Sumner and Maverick Streets.

Through annexation Boston became possessed of several local parks and squares, which had received much attention from the old municipalities. Some of these have been further improved since annexation, and all have received the same care bestowed upon the parks and squares of the city proper. In the Roxbury district, the largest is Washington Park, at Dale and Bainbridge Streets, containing more than 9 acres. Other parks in this district are Orchard Park, at Chadwick, Orchard-park, and Yeoman Streets, containing over 2 acres; Longwood Park, at Park

and Austin Streets, about $\frac{1}{2}$ an acre; Walnut Park, between Washington Street and Walnut Avenue; Bromley Park, from Albert to Bickford Streets; Lewis Park, Highland and New Streets; and Linwood Park, Centre and Linwood Streets. Madison Square, situated at Sterling, Marble, Warwick, and Westminster Streets, includes nearly 3 acres; and Fountain Square, Walnut Avenue, from Monroe to Townsend Streets, embraces about $2\frac{1}{2}$ acres. Around the stand-pipe of the Cochituate Water-works, on the "Old Fort" lot, between Beech-glen and Fort Avenues, is a little park tastefully laid out.

In the Dorchester district the principal park, or square as it is called, is on Meeting-house Hill, one of the landmarks in this historic section of the present city. Here stands the soldiers' monument. On the top of the hill known as Mount Bowdoin is a square, pleasantly laid out; and at Church and Bowdoin Streets is Eaton Square.

In the Charlestown district the largest park, or square, is near "The Neck." It is bounded by Main, Cambridge, Sever, and Gardner Streets; contains about $1\frac{1}{2}$ acres enclosed by an iron fence, and is known as Sullivan Square. In Winthrop Square, containing about $\frac{2}{3}$ of an acre, bounded by Winthrop, Common, and Adams Streets, is situated the soldiers' and sailors' monument. One of the oldest squares, at the head of Bow, Main, and Chelsea Streets, is City Square, which, like the others, is enclosed by an iron fence, and is trim and inviting in appearance.

The only park in the Brighton district is called Jackson Square. It is pleasantly situated on Chestnut-hill Avenue, Union, and Winship Streets, and is enclosed by a stone curb. The walks and drives about the Chestnut-hill Reservoir, elsewhere described, are also much enjoyed by the residents of this district.

Boston is richer than most American cities in works of art exposed in her public ways and parks, though not so rich as she ought to be, and will probably be in the course of a few years. The finest piece of statuary in the city, displayed out of doors, is

The Equestrian Statue of Washington, by Thomas Ball, which is placed in the Public Garden, at the Arlington-street entrance, opposite Commonwealth Avenue. It is said to be the largest piece of its kind in America. The movement for its erection began in the spring of 1859. The first substantial contribution to the fund was from the receipts of an oration by Robert C. Winthrop in the Music Hall that year; and, in November following, a great fair for its benefit was held with gratifying success. The city appropriated \$10,000; and \$5,000 of the surplus money of the Everett statue fund, given after the completion of that work, brought the fund up to the required amount. The contract with Ball was made in 1859, and four years

after he had completed the model: but, owing to the war, the casting was delayed; and it was not until 1869, on the 3d of July, that the statue was in place and unveiled. It was regarded as a matter for special congratulation, and not a little boasting, that all the work upon it was done by Massachusetts artists and artisans. The height of the statue is 22 feet, and with the pedestal reaches 38 feet. The foundation is of solid masonry, resting on piles eleven feet deep; and the pedestal itself is a fine piece of work.

The Daniel Webster Statue, in the State-House grounds, facing Beacon Street, is of bronze, by Hiram Powers. It was the second of Webster executed by the sculptor, the first having been lost at sea while being brought from Leghorn. It was placed in position in 1859, and cost \$10,000.

The Horace Mann Statue, erected in 1865, also in front of the State House, was the work of Emma Stebbins; and the fund for its execution was raised by contributions from school-teachers and children throughout the State. The State paid for the pedestal. The statues within the State House are mentioned in the sketch of the State House, in another chapter.

The Alexander Hamilton Statue was the first placed in Commonwealth Avenue. It is of granite, by Dr. Rimmer, and is said to have been the first in the country cut from that material. It was presented to the city by Thomas Lee, in 1865, and was put in place at his expense. On the sides of the substantial granite pedestal are the following inscriptions: —

<p>ALEXANDER HAMILTON, BORN IN THE ISLAND OF NEVIS, WEST INDIES 11 JANUARY 1757, DIED IN NEW YORK 12 JULY 1804.</p>	<p>ORATOR, WRITER, SOLDIER, JURIST, FINANCIER. ALTHOUGH HIS PARTICULAR PROVINCE WAS THE TREASURY, HIS GENIUS PERVADED THE WHOLE ADMINISTRATION OF WASHINGTON.</p>
--	---

The Edward Everett Statue, in the Public Garden, on the Beacon-street side, is by W. W. Story, modelled in Rome in 1866, cast in Munich, and formally presented to the city, and put in place in November, 1867. The statue fund was raised by popular subscription in 1865, with remarkable success, and grew so large that there was a surplus after the completion of the work, out of which a portrait of Everett for Faneuil Hall was paid for, \$5,000, as elsewhere stated, given to the Washington equestrian statue fund, and \$10,000 given to the Governor Andrew statue fund. The Everett statue has been sharply criticised, though it has many admirers. It represents the orator as standing with his head thrown back, and his right arm extended and raised, in the act of making a favorite gesture.

1. Bunker Hill, Charlestown. 2. Alex. Hamilton, 3. Gen. Glover, Commonwealth Ave. 4. Army and Navy, Charlestown. 5. Gov. Andrew, State House. 6. Benj. Franklin, front of City Hall.

The **John Glover Statue**, on Commonwealth Avenue, is by Martin Milmore, and was given to the city by Benjamin Tyler Reed in 1875. It is of bronze, of heroic size, and represents the sturdy old soldier in Continental uniform, with the heavy military overcoat hanging in graceful folds from his shoulders. His left leg is advanced, with the foot resting on a cannon; and in his right hand he holds his sword, the point resting on the ground, while the empty scabbard is grasped in his left. The inscription is as follows:—

**JOHN GLOVER,
OF MARBLEHEAD,
A SOLDIER OF THE REVOLUTION.**

HE COMMANDED A REGIMENT OF
ONE THOUSAND MEN RAISED IN THAT TOWN,
KNOWN AS THE MARINE REGIMENT,
AND ENLISTED TO SERVE THROUGH THE WAR;
HE JOINED THE CAMP AT CAMBRIDGE, JUNE 22, 1775,
AND RENDERED DISTINGUISHED SERVICE IN TRANSPORTING
THE ARMY FROM BROOKLYN TO NEW YORK, AUG. 28, 1776,
AND ACROSS THE DELAWARE, DEC. 25, 1776.

HE WAS APPOINTED BY
THE CONTINENTAL CONGRESS, A BRIGADIER GENERAL,
FEBRUARY 21, 1777.

BY HIS COURAGE, ENERGY, MILITARY TALENTS
AND PATRIOTISM, HE SECURED THE CONFIDENCE OF
WASHINGTON,

AND THE GRATITUDE OF HIS COUNTRY.

BORN NOVEMBER 5, 1732,
DIED AT MARBLEHEAD, JANUARY 30, 1797.

The statue stands on a substantial granite pedestal.

The **Aristides and Columbus Statues** in Louisburg Square, which extends from Mount Vernon to Pinckney Street, are specimens of Italian art, which were imported by the late Joseph Iasigi, long a prominent Boston merchant, and given to the city.

The **Benjamin Franklin Statue**, to the left of the path leading to the main entrance of the City Hall, is by Richard S. Greenough, and was cast by the Ames Manufacturing Company of Chicopee, Mass. It is a large statue, eight feet high, standing on a granite pedestal, capped with a block of verd-antique marble. The four bas-reliefs represent as many periods of

Franklin's career. This statue was publicly inaugurated in 1856. A similar statue of Josiah Quincy has been placed on the right of the path.

Of private work publicly displayed, the most noteworthy are the three typical figures in granite on the front and top of Horticultural Hall, corner of Tremont and Bromfield Streets, representing Flora, Ceres, and Pomona, cut by Martin Milmore; and the figure of the Saviour, copied from Thorwaldsen, on the apex of the pediment of the Church of the Immaculate Conception on Harrison Avenue.

The Ether Monument was presented by Thomas Lee to the city, in 1868. It is a fine piece of work, and well placed on the Public Garden, on the Arlington-street side, towards Beacon Street. On one side is this inscription:—

TO COMMEMORATE
THE DISCOVERY
THAT THE INHALING OF ETHER
CAUSES INSENSIBILITY TO PAIN.
FIRST PROVED TO THE WORLD
AT THE
MASS. GENERAL HOSPITAL
IN BOSTON,
OCTOBER A.D. MDCCCXLVI.

On each of the sides are medallions, well executed in marble, representing the physician and the surgeon operating upon the sick and injured, under the influence of ether; and the shaft is surmounted by two admirably modelled figures. The monument is of granite and red marble.

The Army and Navy Monument, erected by the City of Boston in memory of her sons who fell in the civil war, stands on Flag-staff Hill in the Common. Martin Milmore of Boston was the sculptor. The shaft is of white Maine granite, and reaches a height of over 70 feet. The foundation, is of solid masonry, cruciform in shape, built up from a depth of 16 feet to the ground level. On this is a platform of stone, covering an area 38 feet square, and reached by three steps. From this platform rises a plinth, nine feet high, with projecting pedestals at each of the four corners. These pedestals are ornamented upon the sides and front with carved wreaths of laurel. Upon them stand four bronze figures, each eight feet high, representing Peace, History, the Army, and the Navy. The statue of Peace represents a female figure, robed in classic drapery, seated on a stone. Her

right arm is raised and extended, and in her hand she holds an olive-branch toward the south. The figure representing the Muse of History also occupies a sitting position, and is clad in simple Greek costume. The left hand holds a tablet, which rests upon the knee; in the right is a stylus. A wreath of laurel encircles the head. The face is turned slightly away and upward, as if in meditation. The statue of the Sailor faces the sea. It is in an easy attitude, the right hand resting upon a drawn cutlass, whose point touches the ground, the left hand supported by the hip. The naval costume is well executed. The army is represented by the figure of a Soldier, standing at ease, with overcoat, belt, and accoutrements. His musket rests upon the

ground. One hand clasps its barrel; the other rests upon the muzzle. On the four sides of the plinth, between the pedestals, are bronze *mezzo-relievos*, 5 feet 6 inches in length by 2 feet 6 inches in width, symbolical of incidents of the war. That on the front of the monument represents the departure of troops for the war, and introduces the portraits of Gov. Andrew, Archbishop Williams, A. H. Vinton, D.D., Phillips Brooks, D.D., Wendell Phillips, Henry W. Longfellow, and others, standing on the State House steps, while with the troops marching by are Gen. Butler, Gen. Reed, Col. Cass, Col. Shaw, and Gen. Chas. Russell Lowell. The relief symbolizing the works of the Sanitary Commission has two parts; one showing the prominent members of the commission from

Boston in consultation, the other representing the work in the field. Portraits are given of Gov. Rice, James Russell Lowell, Ezra H. Gannett, D.D., E. R. Mudge, George Ticknor, Marshall P. Wilder, Col. W. W. Clapp, the Rev. E. E. Hale, and several ladies. The "Return from the War" is the most elaborate relief. It represents a regiment drawn up in front of the State House. On

Army and Navy Monument, Boston Common.

the steps are Gov. Andrew, Dr. Edward Reynolds, Henry Wilson, Gov. Claflin, Mayor Shurtleff, Judge Putnam, Charles Sumner, and others. Gens.

 2. Dorchester Soldiers' Monument. 3. Harvard Monument.

MONUMENTS AND FOUNTAINS IN BOSTON.

Banks, Devens, Bartlett, and Underwood are on horseback. The fourth relief commemorates the achievements of the navy, and has two parts. The left-hand portion shows a group of 11 figures, and represents the departure of sailors from home; while on the right is a view of a naval engagement.

On the plinth rests the pedestal proper, 14 feet 3 inches high, terminating in a surbase. The sides of the die are panelled. In that facing the south is cut the following inscription, written by Charles W. Eliot, president of Harvard University:—

TO THE MEN OF BOSTON
WHO DIED FOR THEIR COUNTRY
ON LAND AND SEA IN THE WAR
WHICH KEPT THE UNION WHOLE
DESTROYED SLAVERY
AND MAINTAINED THE CONSTITUTION
THE GRATEFUL CITY
HAS BUILT THIS MONUMENT
THAT THEIR EXAMPLE MAY SPEAK
TO COMING GENERATIONS

From the surbase of the pedestal rises the granite shaft, which is of the Roman-Doric order. About its base are grouped figures in *alto-relievo*, representing the four sections of the Union,—North, South, East, and West. Sculptured wreaths surround the shaft at irregular intervals. The capstone is a circular block of granite, 2 feet 11 inches high and 5 feet in diameter. On this stands the bronze ideal statue of the Genius of America, which was cast in Philadelphia, and is 11 feet high, representing a female dressed in a flowing robe. Over the robe is a loose tunic bound with a girdle at the waist. A heavy mantle, clasped at the throat, is thrown back over the shoulder, and falls the full length of the figure behind. On the head is a crown with 13 stars. In the right hand, which rests upon the hilt of an unsheathed sword, are two laurel wreaths. The left hand holds a banner draped about a staff, which reaches to a height of 6 feet above the head. The face fronts towards the south, and the head is slightly bowed. The cost of the entire monument was \$75,000. The corner-stone was laid Sept. 18, 1871, on which occasion there was a great parade. The dedication took place Sept. 17, 1877, when over 25,000 men marched in the procession, in-

cluding the militia of the State, the veterans of the Grand Army, the leading generals of the civil war, the State and city officials, civic societies, the school children, etc. The procession marched over a route more than six miles long, and was four hours in passing a given point, all delays excluded. The principal feature of the dedication ceremonies was an oration by Gen. Charles Devens.

The Bunker-Hill Monument stands in the centre of Monument Square, on Breed's Hill, where the principal redoubt was thrown up by the Americans on the night before the battle. The monument is 221 feet high, and consists of 6,700 tons of Quincy granite. The base is 30 feet square, and the column tapers gradually to 15 feet at the apex. Inside the shaft is a hollow cone, in which is a spiral flight of 295 stone steps ascending to a chamber 11 feet square and 17 feet high, whence a beautiful view is obtained on a clear day from the four windows. The capstone of the apex, above this observatory, is in one piece, and weighs $2\frac{1}{2}$ tons. The room contains two small cannon, the inscriptions on which tell their story. The corner-stone of the monument was laid June 17, 1825, by Gen. Lafayette; and the oration was by Daniel Webster. The work was under the direction of Solomon Willard. The monument cost over \$150,000. It was dedicated June 17, 1843, on which occasion Daniel Webster was again the orator, President Tyler and his cabinet being present. The centennial anniversary of the battle, on June 17, 1875, has been referred to. The monument is under the charge of the Bunker-hill Monument Association. At its foot a modest slab marks the spot where Gen. Warren was killed.

The Harvard Monument, to the memory of John Harvard, erected from subscriptions of graduates of Harvard College, is situated on the top of the hill in the old graveyard near the State prison, in the Charlestown district. It is a solid granite shaft. On the eastern face is inscribed the name John Harvard, and on a marble tablet the following words:—

ON THE TWENTY-SIXTH DAY SEPTEMBER A.D. 1828
THIS STONE WAS ERECTED BY THE
GRADUATES OF THE UNIVERSITY AT CAMBRIDGE
IN HONOR OF ITS FOUNDER
WHO DIED AT CHARLESTOWN
ON THE TWENTY-SIXTH DAY OF SEPTEMBER A.D. 1638

On the western side is an inscription in Latin, of which the following is a free translation: "That one who merits so much from our literary men should no longer be without a monument, however humble, the graduates of the University of Cambridge, New England, have erected this stone, nearly two hundred years after his death, in pious and perpetual remembrance of John Harvard." At the dedication of this monument, Edward Everett delivered the oration.

The Charlestown Soldiers' and Sailors' Monument stands in Winthrop Square, once the old militia training-ground, set apart in colonial days. On a high pedestal stands a group of three figures, the "Genius of America" holding out laurel wreaths above the soldier and sailor standing on each side. The sculptor was Martin Milmore. The monument is of Hallowell granite, and cost \$20,000. The dedication took place on the ninety-seventh anniversary of the battle of Bunker Hill, June 17, 1872; and the address was by Richard Frothingham. On the occasion of the memorable centennial celebration of the battle of Bunker Hill, June 17, 1875, the Fifth Maryland Regiment, of the visiting military organizations from the South, placed upon this monument a beautiful floral shield, as a token of their good-will towards their Northern guests, and as a tribute to the Northern heroes who had fallen in the unhappy civil conflict. The act was gracefully performed, without ostentation. "The Marylanders," the local press of the day reported, "visited Charlestown very quietly, notifying nobody beforehand, and going entirely without escort. They carried with them a magnificent floral shield, composed of white and carnation pinks, inscribed 'Maryland's tribute to Massachusetts,' and marched to Winthrop Square, in which stands the beautiful monument erected by Charlestown to the memory of her sons who fell in the military and naval service during the war. Here the regiment halted, forming three sides of a square around the monument; the band played a dirge, and the regiment stood at parade rest, while the shield was reverently laid on the monument. Then the orders were given, 'Attention!' 'Carry arms!' 'Present arms!' After this simple, beautiful ceremony, the regiment departed."

The Dorchester Soldiers' Monument stands in the large open space in front of the church on Meeting-house Hill. Its foundation, 5 feet deep, is laid upon a ledge of rock. It is of red Gloucester granite, is 31 feet high, and 8 feet square at the base. The form is that of an obelisk. Its heavy base has square projections at the angles supporting four buttresses, each with an upright cannon in half relief. Between these are raised polished tablets with the names of Dorchester's fallen soldiers. Above the tablets are garlands of laurel in relief. A heavy cornice caps the die containing the tablets, and above is a second die with ornamental scrolls at the corners. On the four faces of the die are round panels with sunken marble tablets having appropriate inscriptions and symbols. The shaft, an obelisk, which rises from the second die, is 4 feet square at the base, and has two projecting belts, the lower one with a large star in relief on each face, and the upper the shield of the United States. The style of the monument is a dignified Renaissance, and the architect was B. F. Dwight. The dedication took place on Sept. 17, 1867; the oration being delivered by the Rev. Charles A. Humphreys of Springfield.

The Roxbury Soldiers' Monument is on Sycamore and Poplar Avenues, Forest-hills Cemetery. In the centre of a lot containing over 2,000 square feet, on a granite pedestal about six feet high, stands a bronze infantry soldier of heroic size. The statue was designed by Martin Milmore, cast at Chicopee, Mass., and erected in 1867, after the old city of Roxbury had become incorporated with the municipality of Boston. On the front and the reverse of the pedestal are the following inscriptions:—

<p>ERECTED BY THE CITY OF ROXBURY IN HONOR OF HER SOLDIERS, WHO DIED FOR THEIR COUNTRY IN THE REBELLION OF 1861-1865 <hr/>1867</p>	<p>"FROM THE HONORED DEAD WE TAKE INCREASED DEVOTION TO THAT CAUSE FOR WHICH THEY GAVE THE LAST FULL MEASURE OF DEVOTION." Abraham Lincoln, at Gettysburg, Nov. 1863.</p>
--	--

The lot is enclosed by an emblematic granite railing, and contains the bodies of a score of Roxbury soldiers. On the base of the railing the name of each person buried, with his regiment, and date of death, is chiselled and gilded. Nearly half of those lying here (members of the Thirty-fifth Regiment Mass. Vols.) fell at Antietam in less than a month after their departure from the State. This monument is elaborately decorated on Memorial Day by Thomas G. Stevenson Post 26 of the G. A. R., when a miniature flag is placed on each grave.

The West-Roxbury Soldiers' Monument is at the corner of Centre and South Streets, near Curtis Hall, formerly the town hall, Jamaica Plain. The monument, in Gothic style, is 34 feet high, of light gray granite, except the base, which is of the dark Quincy stone. The ground plan is square, and the chief feature is a massive structure supporting a sort of pyramidal pedestal on which stands the statue of a soldier leaning on his gun, in pensive contemplation of the loss of his comrades. On each of the four sides of the monument is a pointed archway opening into a vaulted chamber. In the gables above the arches are the names of Lincoln, Andrew, Thomas, and Farragut. At the corners are four pinnacles ornamented with military trophies in relief. In the vaulted chamber stands a stone of Italian marble inscribed with the names of the West-Roxbury men who fell during the war. The monument is 34 feet high. The architect was W. W. Lummis. The dedication took place on Sept. 14, 1871, the principal feature being an address by James Freeman Clarke.

The Brighton Soldiers' Monument was erected in Evergreen Cemetery the year after the close of the war, and was dedicated on July 26, 1866, when the oration was delivered by the Rev. Frederick Augustus Whitney. The monument has a square base, two courses high, with projections at each corner supporting cannon-balls. Upon this base is a pyramidal plinth with its four sides covered with inscriptions, and names of the Brighton soldiers who died in the war. This supports a square shaft, on the die of which are national trophies in relief; and on a ball, at the top of the shaft, rests an eagle. The monument is 30 feet high, and cost \$5,000.

The Charles Sumner Statue stands in the Public Garden, near Boylston Street, and faces Beacon Street. It is of bronze, 9½ feet high, representing Sumner in a firm, graceful attitude, with his left hand in front clasping a roll of manuscript. The pedestal is of Quincy granite. The cost was \$15,000, raised by contributions of the people. Three prizes of \$500 each were offered for the three most approved designs; and they were awarded to Miss Anne Whitney, Martin Milmore, and Thomas Ball, the last named being selected as the sculptor. At the unveiling of the statue, Dec. 23, 1878, there were no formal ceremonies, but an historical sketch of the statue was read by Gov. A. H. Rice.

The Josiah Quincy Statue was erected in front of the City Hall, Sept. 17, 1879. Its cost of \$18,000 was defrayed by the income of a fund of \$20,000 left in 1860 by Jonathan Phillips to adorn and embellish streets and public places. This fund now amounts to nearly \$50,000. The statue is of bronze, and the pedestal of Italian marble, both designed by Thomas Ball.

The Norsemen Statue and Fountain is to be erected in Post-office Square, to commemorate the supposed visit of the Norsemen to New England, about the year 1000. The statue, of bronze, will represent Leif, son of Eric, who first colonized Greenland. It will wear the ancient armor of the Norsemen,—a shirt of mail, a two-edged sword, and the pointed helmet of that people. The pedestal will be of rough granite, richly incrusting in bronze, with grape vines, leaves, and clusters. Water will fall from the twisted vine stems at the four corners into a simple lipped oval basin of polished granite. The cost of statue and pedestal will be \$18,000; and it is hoped that the City will furnish the basin and its granite rim, and that the United-States Government will consider the monument a sufficient addition to the beautiful front of the Post-office to make an appropriation towards its cost. As it will stand in front of the buildings of the New-England Mutual Life-Insurance Company of Boston and the Mutual Life-Insurance Company of New York, these companies will probably give \$5,000; and Ole Bull and his friends are to give \$2,000; while the balance will be raised by contributions from citizens. Thomas G. Appleton is chairman of the committee who have the matter in charge.

The **Emancipation Group**, erected in Park Square in front of the Providence Railroad passenger-station, is by Thomas Ball, and was a gift to the city by Moses Kimball. Its cost, exclusive of the curbing, which was furnished by the city, was \$17,000. It is of bronze, on a granite pedestal, and is a duplicate of the "Freedman's Memorial" statue in Lincoln Square, in Washington, D.C. It represents the erect form of Abraham Lincoln spreading out his right hand over the head of a kneeling freedman with his shackles broken. On the pedestal is the word "Emancipation." On the base are these words: "A race set free · and the country at peace · Lincoln · rests from his labors." It was unveiled Dec. 6, 1879; Mayor F. O. Prince delivering the oration.

The **Samuel Adams Statue**, by Miss Anne Whitney, stands in Adams

Samuel Adams Statue, Washington Street.

Square in New Washington Street. The Revolutionary patriot is presented as clothed in the citizen's dress of his period, and standing erect with folded arms. He is portrayed just after he has demanded of Gov. Hutchinson the removal of British troops from Boston, and is awaiting the Englishman's answer. The statue is of bronze, and is a counterpart of that by the same artist at Washington. Inscriptions are placed on each of the four panels of the pedestal as follows: "Samuel Adams · 1722-1803 · A patriot · He organized the Revolution and signed · the Declaration of Independence · Governor ·

A true leader of the people · Erected A.D. 1880 · From a fund bequeathed to the city of Boston · by Jonathan Phillips · A statesman incorruptible and fearless." This statue was unveiled on July 5, 1880. Its cost was \$6,856.

1. Emancipation Statue, Park Square. 2. Col. Wm. Prescott, Foot of Bunker-hill Monument.
3. Josiah Quincy, Front of City Hall. 4. Gov. John Winthrop, Scollay Square.

STATUES IN BOSTON.

The Gov. Winthrop Statue, by Richard S. Greenough, in Scollay Square, is of light bronze, on a pedestal of polished red granite, and a base of Quincy granite. It represents the first governor landing from the ship on the soil of the New World. The figure is clad in the picturesque garb of

Charles Sumner Statue.

that period; the right hand holding the roll of the colony charter, and the left bearing the volume of the Scriptures. Behind the figure is shown the base of a newly-cut forest-tree, with a rope attached, significant of the fastening of the boat in which he was supposed to have just reached the shore. The statue is a duplicate of that placed by the State in the Capitol at Washington. It was put in place on Sept. 17, 1880. Its cost was \$7,391.

The Col. William Prescott Statue, by W. W. Story, stands in the main path of the grounds in front of Bunker-hill Monument, and on the spot where the hero is supposed to have stood while encouraging his men at

the opening of the battle of Bunker Hill. It is intended to represent him at the moment he uttered the memorable words, "Don't fire till I tell you; don't fire until you see the whites of their eyes!" The statue is of bronze, nine feet in height, and stands on a high granite pedestal. It was unveiled with appropriate ceremonies on the 17th of June, 1881; Robert C. Winthrop delivering the oration.

The Mind of the City.

THE LIBRARIES, ART AND SCIENTIFIC INSTITUTIONS, AND MUSICAL SOCIETIES.

IN the number and extent of its libraries, Boston stands at the head of American cities, and will even bear comparison with European capitals. In none of the latter are the libraries so accessible to all, and few are so well arranged, as those of Boston. This fact makes the New-England metropolis the most desirable centre on the American continent for the scholar and student; and the possession of these great institutions has done much to give Boston its position as a seat of literature and science,—a position it promises to maintain. In the city and in Cambridge, which is so near that its libraries are almost as accessible as those of the city, there are three large libraries containing about three-quarters of a million books, besides several hundred thousand pamphlets. Then there are many large special libraries, all of which are easily available for any one having occasion to use them.

The **Boston Public Library**, on Boylston Street, opposite the Common, is, if its branches be included, the largest library in America, and an institution much appreciated by the reading public, for its advantages are free to all. Its establishment was authorized in 1848, and it was opened in 1854 on Mason Street. Edward Everett was the first president of the board of trustees. The present building was completed in 1858, at a cost of \$365,000. In 1852 Joshua Bates of London gave the library \$50,000, and subsequently \$50,000 worth of books. Mr. Everett gave 1,000 books at the outset. Theodore Parker willed over 12,000 volumes to the library. George Ticknor gave nearly 7,500 books, including his valuable Spanish collection. The sons of Dr. Nathaniel Bowditch gave their father's library of over 2,500 books and manuscripts. Abbott Lawrence bequeathed \$10,000 to the institution. Mary P. Townsend gave \$4,000, and Jonathan Phillips \$30,000. The library has had deposited with it the Prince collection, willed in 1758 by the Rev. Thomas Prince to the Old South Church; and has purchased the Thomas P. Barton library of 12,000 volumes, including the best Shakespearian collection in this country, and much early French literature. The library building, of brick with sandstone trimmings, has two lofty stories and basement, and measures in the main building 82 by 128 feet. On the first floor are an entrance-hall, distribution-room, lower library-room, and

two large reading-rooms. On the second floor is Bates Hall, where most of the books are stored in 60 alcoves and 6 galleries. The library, with its eight branches, containing more than 400,000 volumes, is supported by the city's annual appropriation of \$120,000 or more. In 1872 the city appropriated \$70,000 to buy the adjoining Richardson estate, so as to provide for future expansion; and in 1873 an appropriation was made of \$30,000 for an addition to the building. Two members of the city council are always on the board of trustees, which comprises seven members, who oversee and control the library business, subject to city ordinances. The Board of Trustees of the Boston Public Library was incorporated in 1878, thus making the institution partially independent, and making it more difficult for the city council to interfere with the administration of the institution. The executive force of the library consists of about 150 persons, organized as a central staff under the chief librarian, and (also subordinate to him) eight branch staffs with their librarians. In the eight branch libraries, at East Boston, South Boston, Roxbury (to which the Fellowes Athenæum has been added), Charlestown district, Brighton district, South End, Jamaica Plain district, and the Dorchester district, besides the eight librarians there are about 50 assistants. More than two-thirds of the persons employed are women. Quarterly bulletins showing the most important accessions, and other partial catalogues or "class-lists," are issued, such as History and Biography, Fiction, Prince Library, etc.; also branch catalogues; but no complete single catalogue in book-form is issued or intended. Instead, there is a card-catalogue, with subjects and authors alphabetically arranged, in drawers, which are open to the public. There is, besides, an official card-catalogue. About 1,300,000 issues a year are now recorded, and an average of only one book is lost out of every 9,000 delivered. The central reading-room, supplied with all the principal American and foreign periodicals, is open every day in the week. C. C. Jewett was the first superintendent; and at his death, in 1868, he was succeeded by Justin Winsor, the present librarian of Harvard University. In 1877 Mr. Winsor resigned, and Dr. Samuel A. Green temporarily acted as superintendent. In August, 1878, Mellen Chamberlain was elected librarian,—the term superintendent being dropped in the act of incorporation. The State has given the city a lot of land on Dartmouth and Boylston Streets for the erection of a new Public Library building of sufficient capacity to accommodate the accumulations of the immediate future. The Boston library is already the largest in the world for free circulation.

The Boston Athenæum, which grew out of a reading-room established by the Anthology Club, was incorporated in 1807. For some years it included a library, a museum of natural history and of curiosities, philosophical apparatus. and models of machines, and also an art-gallery; but as

THE BOSTON PUBLIC LIBRARY, BOYLSTON STREET.

other societies, specially devoted to these different objects, were founded, the Athenæum transferred to them its various collections. The building now contains only the library of 121,136 volumes, and a few pictures, busts, and statues, serving for decoration. Although the right to use this library is confined to the 1,049 shareholders and their families,—about 800 of

The Boston Athenæum, Beacon Street.

whom pay the annual assessment that entitles them to take books from the building,—nevertheless strangers, especially students and authors, are always welcome, and given access to the reading-rooms and collections. The income-producing funds of the Athenæum are over \$300,000; and the value of the real estate, books, paintings, and statuary is \$470,000. The library, each year, adds about 3,000 volumes, and circulates about 50,000 volumes. The library-room was first in Congress Street;

afterwards, in 1821, on Pearl Street, in a house given by James Perkins, where the society remained until the completion, in 1849, of the present handsome building on the south side of Beacon Street, between Bowdoin and Somerset Streets. The library of George Washington, purchased by the corporation in 1848 at a cost of \$4,000, is one of the many interesting collections that have come into the possession of the Athenæum. The present librarian is Charles A. Cutter, who has filled the position for the past 12 years. Samuel Eliot is the president, and Charles Deane vice-president.

The Massachusetts Historical Society was founded in 1791, by a few gentlemen who were interested in American history, with the object of preserving for reference all books, pamphlets, manuscripts, and other materials containing historical facts. The library now contains over 25,000 books and 50,000 pamphlets. The Dowse collection, given by the late Thomas Dowse, in 1856, comprises nearly 5,000 finely-bound volumes, and many choice works. Most of the books are of an historical character, a specialty being made of local histories, and histories of the civil war. The membership is limited to 100, but the library may be used for reference by any one. It is managed by a council of the officers and an executive committee of five. A librarian, two assistants, and a janitor, are employed.

The society, for several years after its organization, met in the attic of Faneuil Hall; afterwards rooms were occupied in Hamilton Place, and then in Franklin Street. In 1833 the present quarters on Tremont Street were occupied. The society has many relics of historic interest, such as King Philip's samp-bowl, a gun used at the capture of Gov. Andros by the Bostonians in 1689, a silk flag presented by Gov. Hancock to a colored company called the "Bucks of America;" the swords of Miles Standish, Gov. Carver, Gov. Brooks, Col. Church, Sir William Pepperell, Capt. Linzee, and Col. Prescott; the desk used by the successive speakers of the Representatives in the Old State House; an oak chair said to have been made in London in 1614, and brought over in the "Mayflower" by Edward Winslow; and portraits of Govs. Endicott, Winslow, Pownall, Dummer, Belcher, Winthrop, Hutchinson, Strong, Gore, etc. That of Winslow is believed to be a Vandyke. The society also possesses the diary of Judge Sewall, who presided at the witchcraft trials in 1792, and the earliest issues of the first American newspaper. The building has been entirely rebuilt in a most substantial manner within a few years, and is thoroughly fireproof. The president is Robert C. Winthrop, who has held that office for more than 26 consecutive years. The librarian is Dr. Samuel A. Green.

The Speakers' Desk; Winslow's Chair.

The State Library of Massachusetts is in the State House, and contains 43,000 volumes. It was established in 1826. The class of books is solid and useful, for example, United States, State, and Territorial statute-books, legal documents, law-reports, works on political economy, education, social science, the acts of the British Parliament, and the French Archives Parle-mentaires. J. W. Dickinson is librarian, C. B. Tillinghast assistant librarian.

The Social Law Library is in the Court House on Court Square, and consists of about 15,000 law-books for professional use. It was incorporated in 1814, and contains many rare and valuable books. Its collections are open to members, and to many officials, judges, and others, granted the privilege by the by-laws. The librarian is F. W. Vaughan.

The Boston Medical Library Association, founded in 1875, was at 5 Hamilton Place until 1878. It then purchased the house at No. 19 Boylston Place, and fitted up reading-rooms and a hall for the meetings of all the medical societies of the city. The library contains 9,000 volumes and 6,000 pamphlets, being the sixth medical library in the United States, and receives regularly 125 periodicals. It is intended to be the headquarters of the medical profession of the State. Dr. James R. Chadwick is the librarian.

The **New-England Historic-Genealogical Society**, incorporated in 1845, is at No. 18 Somerset Street. Its specialty is genealogy, including heraldry, and New-England local history. The house, built in 1805 for a dwelling, was purchased by the Society in 1870, and was remodelled and dedicated the following year. It is of brick, three stories high, 29 by 42 feet in dimensions, with an L in the rear. The front is faced with an artificial stone resembling grayish sandstone, and has Nova Scotia sandstone

N. E. Historic-Genealogical Society, Somerset St.

trimmings. On the first floor is a fire-proof room for the storage of rare books and manuscripts; on the second, the library proper; and on the third, a hall for the meetings of the Society. The cost of the building and furniture was \$43,000. The library contains over 14,000 volumes and 60,000 pamphlets, relating chiefly to the history and the influence of New-England character and life, and includes many very rare works. The Society publish annually the *New-England Historical and Genealogical Register*. Its *Towne Memorial Fund* is used in printing memorials of its deceased members. For thirteen years past, Marshall P. Wilder, Ph.D., has been the president; and to him the Society is indebted for its good financial condition, and especially for his services in raising the sum of \$55,000 for the building and

librarian funds. Benjamin B. Torrey is the treasurer, and John Ward Dean the librarian. The library and archives are open freely to the public.

The **Congregational Library** was organized in 1853, and is the property of the American Congregational Association. It was intended to gather and preserve the writings and mementos, — indeed, every thing available, — that would state and illustrate the principles and work of the Pilgrims and Puritans in laying the foundations of our free institutions. It has never had any funds with which to purchase books. Every dollar has been used to meet necessary running expenses, and pay for the Congregational House; the library waiting for an income from rents when the building is paid for. Its books and pamphlets are largely ecclesiastical, historical, expository, doctrinal, and biographical, — a library of reference rather than popular reading. For consultation it is free to all. The payment of one dollar secures its

general privileges. Its building is fireproof, and had last May a total of 25,815 books and more than 100,000 pamphlets, besides the unique and valuable missionary library, of 7,000 volumes, belonging to the American Board. The librarian is the Rev. I. P. Langworthy.

The General Theological Library, No. 12 West Street, contains over 12,000 volumes, mostly of a theological, religious, or moral character. It is used by members and annual subscribers, and is unsectarian. There is also a reading-room with about 75 periodicals. The library was instituted in 1860, and incorporated in 1864. The Rev. Charles Burroughs, D.D., was the founder. The management is vested in a board of 15 directors. The Rev. Luther Farnham has been the librarian from the beginning.

The Boston and Albany Railroad Library is in the station on Beach Street, and contains over 1,800 volumes. It was established in 1869 by Ginery Twichell, president of the road, and is supported by the corporation for the use of the persons employed. It is open two hours once a week.

The Boston Society of Natural History has a library in its building on Berkeley Street, containing 12,000 books, and 5,000 pamphlets on natural history. The use of the library, which was established in 1831, is confined to members of the society.

Other Libraries.—There are a large number of other libraries of both general and special character. The Boston Museum of Fine Arts has recently begun the collection of works on art; and the Boston Art Club has a valuable library of the same class. Several of the musical societies have good collections of works on music. All the public schools—notably the Boston Latin, and Girls' High and Normal, and nearly all of the Sunday schools, charitable and municipal institutions, as well as the various scientific, social, and religious societies—have their own libraries. Some of these, owing to their special character, are quite valuable.

Art and Science have gained a strong foothold in Boston; and in fact, as a centre of science, she ranks the first city in America, and of art second to none, not excepting even New York. Besides Harvard University in Cambridge, there is in Boston a long list of art and scientific institutions, and clubs and societies devoted to the special sciences and fine arts. The city, as a corporation, maintains various schools of industrial and mechanical drawing; and the study of drawing is thoroughly pursued in all the public schools. There is also a school of wood-carving for boys, maintained by private beneficence. Several fine picture-galleries are connected with the establishments of fine-art dealers, and the city is the home of a large number of artists, many of whom have national reputations.

Of the leading art and scientific institutions, excepting the Institute of Technology, which is referred to in the chapter on educational institutions, comprehensive sketches are given below.

The Boston Museum of Fine Arts, corner of Dartmouth Street and St. James Avenue, is one of the most admirable institutions of modern Boston, though it is as yet but the beginning of what is to become the chief pride and delight of New England. The accompanying illustration shows the building as it will appear when completed. At present only one-fourth of it is finished, namely, the section fronting on St. James Avenue. It is one of the finest structures in the city. The principal material is red brick; and the mouldings, copings, and all the ornamental work, are of red and buff terra-cotta, imported from England. The two large and artistically executed reliefs on the façade represent various figures appropriate to such a building. One shows the "Genius of Art," with illustrations of the art and architecture of all nations, from antiquity to the present day. Among the figures representing the nations, America is the only female; and she holds in her hand Powers's "Greek slave." The other bas-relief represents "Art and Industry" joined. In the roundels are the heads of the most distinguished artists and patrons of art; the Americans being Copley, Crawford, and Allston. This terra-cotta work was the first used on a large scale in America, and is said to be very durable and not costly. It is certainly effective, and gives to the exterior a rich and unique appearance.

The main entrance is given a rich and handsome appearance by white marble steps, and polished granite columns, with terra-cotta capitals. Automatic recording turnstiles admit the visitor to the central hall, whence broad iron staircases ascend to the upper floor. The rooms on the first floor are devoted to statuary and antiquities; those on the second floor to paintings, engravings, productions of industrial art, and bric-à-brac. In the central hall are Thomas G. Crawford's statue of Orpheus, Miss Harriet Hosmer's "Will-o'-the-Wisp," the "Young Columbus" of Giulio Monteverde, a Gobelin tapestry, the "Triumph of France," and various other interesting objects. In the Egyptian Room is a valuable and interesting collection of Egyptian antiquities, acquired by the late Robert Hay of Scotland, purchased after his death, and presented to the Museum by Charles Granville Way. This collection is supplemented by numerous fragments of sculpture collected in Egypt by the late John Lowell, the founder of the Lowell Institute, and presented to the Museum by his family. The mummies and mummy-cases, with their hieroglyphics, the scarabæi, amulets, sepulchral figures, canopic vases, stamped cones, and the granite sculptures, especially that of the lion-headed goddess Pasht, form a remarkably instructive collection.

In the First Greek Room are casts from the oldest Greek sculptures, including the famous lions of Mycenæ and two temple-fronts from Ægina. Here also are a collection of antiquities from the Island of Cyprus, excavated by Gen. di Cesnola; a lot of vases and other objects of Etruscan art

THE BOSTON MUSEUM OF FINE ARTS, ART SQUARE AND DARTMOUTH STREET.

presented by J. J. Dixwell; and a collection of Græco-Italian fictile painted vases, found by Alessandro Castellani in the tombs of Etruria and Campania, presented by T. G. Appleton and Edward Austin. In the Second Greek Room are the famous Olympian casts,—casts of the bas-reliefs from the frieze of the Parthenon and from the Temple of the Wingless Victory; the grand Theseus, the river-god Ilissus, the torso of Victory, and two of the three Fates, from the pediments of the Parthenon; the colossal bust of Jupiter, from the Vatican; the Ludovisi Mars, the Vatican Mercury, the Venus of Miño, the Diana of Versailles, Niobe and her daughters, the Apollo Belvedere, and casts of the recent discoveries at Olympia. The most noticeable casts in the Third Greek Room are those of the Dying Gladiator, and the Discobolus (disk-player) in action and in repose. In the Roman and Renaissance Room, are Michael Angelo's "Day" and "Night," his head of David, the Laocoön, and the reliefs attributed to Scopas and Alcamenes. Almost all the casts in the three Greek rooms and the Roman and Renaissance Room belong to the Athenæum, or were purchased by the Museum with the proceeds of the Charles Sumner bequest. On the landing of the staircase is a cast of the Ariadne of the Vatican. Up stairs, in the hall, hangs Turner's famous painting, "The Slave Ship," which is loaned to the Museum. The visitor, after looking at the canvas with his own eyes, should read Ruskin's lurid description that is printed on cards, and then look on it through Ruskin's eyes. "It is a poetical picture, and no simple rendering of nature, but a passionate expression of the devilish horrors of the slave-trade," writes Thomas G. Appleton in his interesting little book called "A Companion to the Catalogue." In the same hall are many interesting objects, among which are a pulpit-door, inlaid with ivory and ebony, from a mosque at Cairo; a cast of the second bronze gate at the Baptistery at Florence; bronze half-figures of Virgil and Dante; marble busts of Raphael and Rubens; the famous painting "Belshazzar's Feast" by Allston; Benjamin West's "King Lear;" the Dowse collection of English water-color drawings, chiefly copies of the old masters, bequeathed to the Athenæum by the late Thomas Dowse; and Millet's pastels and water-colors.

The large picture-gallery contains many fine paintings, including the Athenæum collection, the Sumner bequest, and numerous works of art loaned by private citizens. The catalogue shows, that among the artists represented are Stuart, Copley, Allston, Smibert, Sir Joshua Reynolds, Gainsborough, Rubens, Dow, Corot, Troyon, Courbet, Fromentin, Le Brun, Greuze, Guido, Correggio, Guercino, Velasquez, Boughton, and several living American painters. Gilbert Stuart's Washington and several of the French pictures are worthy of attention. The loan collection in the next room is remarkably interesting, and includes three fine specimens of tapestry, once

the property of Louis Philippe, loaned by the late George O. Hovey; Persian fabrics, and small arras tapestry; a very complete display of pottery and porcelain, including majolica and Robbia ware; and a rich collection of Chinese, Japanese, celadon, Dresden, Copenhagen, Berlin, Vienna, Rouen, Sèvres, Delft, Wedgwood, Chelsea, Worcestershire, Derby, and other wares, with an equally full collection of pottery. Other cases in this room contain Chinese and Japanese articles, metal-work, cloissonné enamel, electrotype reproductions from objects in the South Kensington Museum, Limoges enamels, medals, and bronzes, German and Venetian glass, embroideries, silk textiles, and laces. The Lawrence Room is fitted with ancient oak panelling of the time of Henry VIII., presented by Mrs. Lawrence. It was intended to have a Lawrence Room containing a valuable collection of ancient armor bequeathed to the Athenæum by Col. T. B. Lawrence; but the armor was destroyed during the Great Fire. In this room are some fine old pieces of sculptured wood furniture, Italian bronzes of the Renaissance period, arms and armor, and other objects. In the next room is the Gray collection of engravings bequeathed to Harvard University by the late Francis C. Gray, and placed in the Museum by the president and fellows, and also the engravings bequeathed by Charles Sumner, nine specimens of Chinese engraving, and a cartoon by Delaroche, called "Christ the Hope and Support of the Afflicted." With this room the tour of the Museum terminates.

The land on which the Museum stands was given to the city by the Boston Water Power Company, to be used either as a public square or as the site of a museum of fine arts. The lot, containing 91,000 square feet, and surrounded by streets on every side, was granted by the city to the trustees in 1870, the year in which the corporation was formed. About \$250,000 was raised by a public subscription; and the first section of the building, the architects of which are Sturgis & Brigham, was begun in 1871, completed and opened in 1876. That portion of the building is but one-fourth of what the whole quadrangle will be when completed, with its two great courts.

In 1878 the institution asked the public for only an additional subscription of \$100,000, but \$125,000 was subscribed; whereupon work was at once begun, and by Oct. 1, 1878, the St. James Avenue front was all roofed in. The new section was opened in the spring of 1879. The corporation is administered by a board of trustees, to which are added persons annually chosen to represent Harvard University, the Institute of Technology, the Lowell Institute, the Public Library, and the Athenæum, also *ex officio* the mayor, the superintendent of public schools, and the secretary of the State board of education. The officers are a president, treasurer, secretary, honorary director, and curator. There are executive, finance, and

museum committees. The Museum is open daily. On Saturdays, from 9 A.M. to 5 P.M., and Sundays from 1 to 5 P.M., the admission is free; at other times twenty-five cents is charged. During the first nine months of 1878 the number of visitors was about 100,000. In the Museum building a School of Drawing and Painting has been established, with day and evening classes, under instruction of Otto Grundmann and E. R. Smith, and has proved very prosperous. Schools of embroidery, wood-carving, and modelling, and decorative art, were also established in 1878. While the Museum owns many of the objects exhibited, almost an equal number are simply loaned by individuals or other corporations. Such loans as the Athenæum collections of pictures and casts, and the Gray collection of engravings, are permanent; but the property of individuals is frequently placed in the Museum for a certain period, and then reclaimed, so that the catalogue is subject to frequent revisions. Martin Brimmer is president of the board of trustees; Henry P. Kidder, treasurer; Charles C. Perkins, honorary director; Charles G. Loring, curator; and E. H. Greenleaf, secretary.

The Boston Art Club, at 64 Boylston Street, on the south side of the Boston Common, was organized in 1855, as the result of a desire manifested among the artists of Boston, and others whose inclinations and professions led them in the direction of art-culture, to meet with one another to further their common end. The club has fine picture-galleries in which exhibitions of fine art are held in the winter and spring of each year. In 1881 it bought a site on the corner of Newbury and Dartmouth Streets, and began the erection of a unique and suitable new club-house. The president is ex-Gov. Alexander H. Rice, and the treasurer C. E. Stratton.

The Boston Society of Decorative Art, organized in 1878, occupies rooms at 8 Park Square. The objects form an interesting exhibition of needle-work and decorated porcelain and pottery. The society sells these articles; and a committee provides instruction in wood-carving, art-embroidery, and china-painting. It is in correspondence and has intimate relations with the New-York Society, but is an independent organization. It gives annual public exhibitions. Roland G. Lincoln is president, and Georgiana L. Putnam secretary.

The American Academy of Arts and Sciences has its rooms in the Athenæum Building. It is, with one exception, the oldest scientific society in America, and stands to the United States in a relation similar to that held by the famous academies of France, England, Germany, and other European nations, to their respective countries. It was founded in 1780; and among its principal early members were Benjamin Franklin, James Bowdoin, John Adams, John Hancock, John Quincy Adams, Josiah Quincy, Nathaniel Bowditch, John T. Kirkland, Samuel Dexter, and others eminent in science and literature. It has members in all sections of the Union, including the leading

scholars and scientists of the country, and also a large number of honorary members in Europe. The society has charge of the awarding of the Rumford medals, which are paid for from a fund given to it in 1796 by Count Rumford, to be devoted to the proper recognition of important discoveries in heat and light made on the American continent or the adjacent islands. The medals have been awarded but eight times. The president of the society is Charles Francis Adams.

The **Boston Society of Natural History** occupies a large brick building, with freestone trimmings, on Berkeley Street, between Boylston and Newbury Streets. The structure, which is 80 feet high and has a front of 105 feet, is adorned by Corinthian columns and capitals. Over the entrance is carved the society's seal, which bears the head of Cuvier; heads of animals are carved on the keystones of all the windows. A sculptured eagle surmounts the pediment. The land on which the building stands was granted by the State. On the first floor are a lecture-room, library, secretary's office, and rooms devoted to geological and mineralogical specimens. On the second floor is a large hall, 60 feet high, with balconies, and several other rooms, in which a grand and valuable collection of birds, shells, insects, plants, skeletons, and other objects of interest are on view. The museum is open to the public Wednesdays and Saturdays. The society holds frequent meetings, publishes books on natural history, and provides lecture-courses in the season. It

was incorporated in 1831, and formerly occupied a building on Mason Street. The late Dr. W. J. Walker was its chief benefactor, giving to the

The Boston Society of Natural History, Berkeley Street.

association at various times a sum aggregating nearly \$200,000. The present building, erected in 1864, cost about \$100,000. The president is Samuel H. Scudder; custodian, Alpheus Hyatt; secretary, Edward Burgess; treasurer, Charles W. Scudder; and librarian, Edward Burgess.

The Warren Museum of Natural History is at 92 Chestnut Street. It was founded by Dr. John C. Warren in 1846. The present fireproof building was erected in 1849, and the institution was incorporated in 1858. The skeleton of the great mastodon,—the most perfect specimen known,—discovered in 1846 near the Hudson River, at Newburgh, gives peculiar interest to the collection. The skeleton was bought by Dr. Warren, shortly after its discovery, and now stands in the lower hall. Close by is a skeleton elephant, and a skeleton horse, for the purpose of comparison. The collections are otherwise exceedingly valuable. Persons wishing to visit the Museum should apply to Dr. J. Collins Warren, 58 Beacon Street, or Dr. Thomas Dwight, 70 Beacon Street.

The Musical Societies of Boston, notably the Handel and Haydn Society, and the Harvard Musical Association, enjoy a wide reputation, and have contributed much towards the cultivation of the musical taste of the public, which has the name of being intelligently critical and of a high order.

The Handel and Haydn Society is the oldest musical organization in the United States, and is the leading choral society in this country, if not in the world. It was founded in 1815, and consists of a large mixed chorus numbering now about 600 voices. It is devoted to the performance of oratorio and other choral music of an earnest character. During the 64 seasons since its organization it has given about 600 concerts, the programmes of which have included works by nearly all the most eminent composers. Since the opening of the Music Hall, in 1852, it has given its concerts in that place. The society took part in the opening ceremonies at the New-York Crystal Palace in 1854, and also in a series of concerts in conjunction with the Thomas Orchestra given in Steinway Hall in 1873. In 1868 it gave its first great triennial festival, which lasted a whole week, performances being given afternoons and evenings. These festivals have been regularly kept up, the last one having been given in 1880. Carl Zerrahn has been conductor of the society since 1854. The headquarters are in the Music-Hall building, and the rehearsals are held in Bumstead Hall.

The Harvard Musical Association, a society whose work in advancing the cause of good music in Boston can hardly be over-estimated, was organized in 1837. Its beginning was very unpretentious. A few graduates of Harvard, who in their college days had been members of the little music club called the "Pierián Sodality," chanced to meet, on Exhibition Day in July, 1837, with several of their undergraduate successors in the institution; and, in the course of a pleasant conversation on music topics, the idea was broached of forming a union between past and present members. The proposition met with favor; and on the following Commencement Day, Aug.

30, 1837, the association was formed. After a while the sphere of the organization was enlarged, and the headquarters were removed to Boston. The annual dinners of the association have been important features; and to these occasions some of the foremost music enterprises of Boston owe their birth. Among these were the building of the Music Hall, the establishment of "*Dwight's Journal of Music*," and the giving of classical concerts in regular series. Under the auspices of the association was given the first regular course of chamber concerts in Boston; and these were succeeded by the famous Symphony Concerts, now in their sixteenth season. These met with extraordinary success at the start, and added considerably to the association's funds, for concerts and for the enlargement of its fine library of music. John S. Dwight has been president of the association for several years; and Charles C. Perkins vice-president.

The **Apollo Club** was formed in 1871, and incorporated in 1873, for the performance of part-songs and choruses for male voices. It was started by a few leading singers in church choirs in this city, and during its first year was composed of 52 active (singing) members, and 500 associate (or subscribing) members, who, for an annual assessment, receive tickets to all the concerts given by the club. The number of active members has varied from 60 to 70; and the number of associate members has always remained 500, that limit having been set at the formation of the club. No public concerts are given, and no tickets to its performances are sold. It has, on a few occasions, sung in a semi-public manner, by request of the authorities of the State or the City—as at the funeral of Charles Sumner, the centennial celebration of Bunker Hill, and the State reception to President Hayes in 1877. B. J. Lang has been its music director since its formation. Its membership has included some of the finest vocalists of this neighborhood among its active members, and many of the best citizens among its associates. Its success has been such that similar clubs have been formed all over the country, several taking the same name. It has convenient club-rooms, and a small hall for its private weekly rehearsals, at 151 Tremont Street. Its concerts are generally given in the Music Hall.

The **Boylston Club**, a private musical society, was organized in 1872 for the study of music for the male voices alone. Its first public appearance was in 1873. In 1876 the purpose and resources of the club were enlarged by the addition of an auxiliary chorus of ladies. The club contains three distinct bodies,—a complete and carefully-trained male chorus, a four-part female chorus, and a mixed chorus, so formed that it is, in fact, a combination of two complete choruses,—a first and a second. In its public performances, each of these three bodies is fully represented. None but competent singers are admitted to active membership, and under stringent regulations as to attendance at rehearsals. The active membership now

numbers 90 ladies and 90 gentlemen. In 1878 the club gave a complete mass by Palestrina, and the famous B-flat motet of Bach, both of which were heard for the first time in this country at the concerts of this club. Its purpose is to produce at its performances only such works as stand highest in the literature of music. J. B. Sharland was the first, and George L. Osgood is the present director.

The Cecilia Society was organized in 1874 as an auxiliary of the Harvard Musical Association. It consists of a mixed chorus of about 100 voices, picked from the best solo singers in Boston. Through its first two seasons the society took part in seven of the Harvard Symphony Concerts; but in 1876 the connection with the Harvard Association was dissolved, and the society re-organized on a basis similar to that of the Apollo and Boylston Clubs. About 250 members were received; and these, in consideration of tickets to the concerts of the society, bear its expenses. Several concerts are given in the course of each season; and entrance to them is secured only by membership, or by invitation of members. Since its organization the society has sung compositions of Mendelssohn, Schumann, Durante, Weber, Gade, Schubert, Bach, Max Bruch, Hoffmann, Liszt, Handel, Rheinberger, and others. B. J. Lang has been its only musical director.

The Orpheus Musical Society is the leading musical association among the Germans of Boston. It was organized in 1848, and at the start consisted exclusively of Germans; but as their number in those days in Boston was small its beginning was rather humble, and in marked contrast with its present prosperous circumstances. The excellence of the German music, and the delightful sociability that characterized the institution, made it remarkably attractive to the American friends of the members; and they were finally admitted to associate membership, and even to full membership when their mastery of German proved such as to enable them to join in the singing. The society is composed almost half of Americans. While the tone of the institution is still thoroughly German, the singing being kept exclusively in that language, out of courtesy to the American members the official proceedings are now conducted and the records kept in English. The society, during each season, gives several concerts in its rooms, which are also often the scene of other pleasant festivities. It differs from most other musical organizations of the city in giving greater prominence to social and convivial features.

Other Musical Societies are the Arlington Club, on the plan of the Apollo; the Philharmonic Society, established in 1880, to give orchestral concerts; the Lotus Glee Club, a quartet of male voices, formed in 1881; and the German organizations: the Singing Section of the Boston Turnverein, the Harugari Liederkrantz, the St. Michel's, the Roxbury Männerchor, the Liederkrantz, and the South Boston Liedertafel.

The Brain of the City.

THE UNIVERSITIES, COLLEGES, PUBLIC SCHOOLS, AND OTHER EDUCATIONAL INSTITUTIONS.

THE educational institutions of Boston and its vicinity have, from the earliest days, maintained a most prominent and enviable position. After them have been patterned many of the educational institutions of other cities of this country, and to them it has long been the custom of the patriotic Bostonian to "point with pride." This position has been won by constant care and attention, a wise and liberal management, and a generous and intelligent expenditure of money. Boston was the first to establish, nearly 250 years ago, free schools, open alike to all, since which time her schools have been most jealously fostered and cherished; and now there exist within her limits public schools giving instruction to about 52,000 pupils, at a cost for salaries alone of \$1,250,000, and an annual expenditure of over \$1,500,000, one university (the Boston University), one college (the Boston College), one polytechnic school (the Institute of Technology), and one normal art school, besides nearly 100 private schools, and several free denominational schools. There are also a number of special schools, some of which have particularly interesting features. In her immediate neighborhood are the great University at Cambridge, — the first university in the new country, which stands to-day the best-endowed and the most extensive institution of the kind in America; Wellesley College, at Wellesley; and Tufts College, on College Hill, on the line dividing Somerville from Medford. This chapter will contain sketches of some of the many prominent and characteristic educational institutions of Boston and its vicinity.

Harvard University was founded in 1638, and is still administered under the charter granted in 1650. The principal seat of the university is at Cambridge; but three departments, the Medical School, Dental School, and Bussey Institution (a school of agriculture and horticulture), are situated in Boston. Through the men who have been trained within its walls, the institution has had an important part in forming the character and establishing the fame of Boston; and it has itself been deeply influenced in turn by the strong public spirit of Boston, and has been built up and directed largely by Boston men. For two generations after the settlement of the country, Harvard was the only college in New England; and almost all the native-born clergy were educated there, the clergy being the ruling class. A large

proportion of the families which have been eminent in Boston and Massachusetts are families whose sons, in several generations, have been trained at Harvard. Among the scores of such family-names, those of Adams, Lowell, Mather, Otis, Prescott, Saltonstall, Warren, and Winthrop may be mentioned as having not only a local, but a national, reputation. Among individuals who were conspicuous in Boston in their day, and earned a fame which outlasts their generation, such men as Increase Mather, James Bowdoin, John Hancock, John Quincy Adams, William Ellery Channing, and Charles Sumner come at once to mind, all of whom are identified with the history of Harvard by the love they bore her and the services they rendered her.

The prevailing intellectual tone or temper of the university, like that of the town of Boston, has always been free. The university is hospitable to all religious and political opinions; but its inclination, and that of a majority of its graduates, from the earliest times, has uniformly been towards the side of liberty in Church and State. The particular manifestation of this inclination has changed from generation to generation, but the tendency has been constant and plain to be seen.

While cherished and honored by the State, Harvard University has been, from the first, a private, incorporated institution, supported, in the main, first by the fees paid by its students, and secondly by the income of permanent funds given by benevolent individuals. At present (1881) the value of its lands, buildings, collections, and invested funds is roughly estimated at \$7,000,000. Its annual receipts from students for instruction are almost \$250,000, and its total income is upwards of \$600,000. It has 160 teachers (of whom 55 are professors), besides 26 librarians, proctors, and other officers. It counts, in round numbers, 1,400 students, of whom about 900 are pursuing liberal studies, and 500 professional.

The government of Harvard University may be briefly described as follows: The legal title of the corporation is the "President and Fellows of Harvard College." The corporation, — consisting of the president, fellows (five in number), and treasurer, — and the board of overseers (thirty-two in number), are the governing powers of the whole university, which comprehends the following departments: Harvard College, the Divinity School, the Law School, the Medical School, the Dental School, the Lawrence Scientific School, the Museum of Comparative Zoölogy, the Bussey Institution, the college library, and the astronomical observatory. The Peabody Museum of American Archæology and Ethnology is a constituent part of the university; but its relations to it are affected by peculiar provisions. The twenty-second president of Harvard is Charles W. Eliot, who has filled the executive chair for the past 13 years. It is within the scope of this work to mention only those Harvard buildings that are inside the limits of

Boston; but all of the numerous buildings used by the university are briefly described and fully illustrated in a neat hand-book, entitled "Harvard and its Surroundings." No catalogue is issued by the university, but an official catalogue, containing information regarding all departments of Harvard University, and complete lists of the officers, faculty, and students, is published by Charles W. Sever, proprietor of the University Bookstore, Cambridge.

The Bussey Institution is at Jamaica Plain, near Forest-hills Station, on the Boston and Providence Railroad. It is a school of agriculture and horticulture, and was established as a department of Harvard University, under trusts created by the will of Benjamin Bussey of Roxbury. In 1870 the school was organized; and during the same year a commodious building of Roxbury pudding-stone, 112 by 73 feet, in the Victoria Gothic architecture, was erected. By the end of the next year greenhouses and sheds were built, the grounds and avenues laid out, and a water-supply provided.

The Bussey Institution, Jamaica Plain.

The main building contains an office, a library of 2,000 special books, recitation and collection rooms, and a laboratory, with storerooms and a glass-house attached. The cost of putting up and furnishing these buildings was \$62,000. In 1872 the University received \$100,000 from James Arnold of New Bedford, who left that sum to establish in the Bussey Institution a professorship of tree-culture, and to create an arboretum which will ultimately contain all trees, shrubs, and herbaceous plants that can grow there in the open air. The whole of the Bussey estate recently passed into the hands of the University. It comprises 360 acres, of which 137 acres have

been assigned for the arboretum, and are now being laid out with walks and roadways. With the natural beauties of the estate it will, as an open park, make a delightful resort. The dean of the Bussey Institution is Professor Francis H. Storer.

The Harvard Dental School is at 50 Allen Street, a short distance from the Harvard Medical School. Its basis of instruction is greatly different from that of other dental schools. Here the terms of the Dental School coincide with those of the other departments of the university, and last for nine, instead of the usual four months; and the course is a progressive one of two years, no part of the instruction of the first year being repeated in the second. Before the student can enter upon his second year he must pass a satisfactory examination in the studies of the first year, which are identical with those of the first year in the Medical School, and under the same professors. Three years of study are necessary for admission to examination for a degree, but one year can be passed under a private instructor. The faculty includes sixteen instructors, of whom six are professors. The dean of the Dental School is Dr. T. H. Chandler, whose office is at 74 Commonwealth Avenue.

The Harvard Medical School, North Grove Street.

The Harvard Medical School was founded in 1782, as the result of a very successful course of lectures delivered in Boston before the Boston Medical Society by Dr. John Warren, a brother of Gen. Joseph Warren. The school was carried on in Cambridge until 1810, when it was removed to Boston, "to secure those advantages for clinical instruction and for the study of practical anatomy which are found only in large cities." In 1816 it took possession of a building erected on Mason Street, by means of a

grant obtained from the State, expressly for medical instruction. There it remained until 1846, when the three-story brick building now used was built on North Grove Street, upon land given by Dr. George Parkman. This building, which adjoins the Massachusetts General Hospital, contains chemical laboratories, lecture-room, and apparatus for more than 100 students; microscopical and physiological laboratories; medical and clinical lecture-rooms; professors' and demonstrators' rooms; a library of 2,500 medical works; an anatomical theatre; and a museum hall. In the museum hall is kept the Warren Anatomical Museum, of which the original collection, accompanied by \$6,000 for its care and increase, was given by Dr. John Collins Warren. The museum, which has received many generous donations, is to-day one of the best of its kind in the country. It contains also a very extensive and carefully arranged cabinet, deposited by the Boston Society for Medical Improvement. A new building is being erected on Boylston and Exeter Streets from plans by Ware & Van Brunt. It will be finished in 1882, — the one hundredth anniversary of the foundation of the school. The school has 241 students and 43 instructors, including 12 professors. The dean of the Medical School is Dr. Calvin Ellis.

Wellesley College has unquestionably the largest and handsomest building in the world devoted exclusively to the higher education of women. It is situated in the beautiful village of Wellesley, about 15 miles from the Boston City Hall, on Lake Waban. The grounds, comprising 300 acres, had for many years been cultivated as a gentleman's country-seat, and remind one of an English park. The building, with its wings, is 475 feet long, four and five stories high. It is of brick, trimmed with freestone. This building, designed by Hammatt Billings, the "artist architect," and considered by him his masterpiece, is celebrated for its superb architecture and thorough construction. The college has been successful ever since it was opened in 1875. The number of students is 330, — the largest number at any female college in the world. The standard of study is similar to that of the foremost colleges for young men. The library, which now contains 20,000 volumes, has a capacity of 100,000 volumes. The apparatus, cabinets, and laboratories are extensive, and fully up to the requirements of modern science. The six distinct courses of study are as follows: the general collegiate, the courses for honors in classics, in mathematics, in modern languages, in science, and a five-years' course in music. The college is chartered by the State, and is empowered to confer all the collegiate and honorary degrees that are conferred by any Massachusetts college or university. The College Aid Society spend from \$6,000 to \$7,000 a year to assist poor girls to secure an education. The college is already a national institution, drawing its students from nearly every State in the Union. The average age of the

students is about 20 years. The number of teachers is 30. The president is Ada L. Howard.

Wellesley College, Wellesley.

The Boston University, with temporary headquarters at 18 and 20 Beacon Street, is an institution founded by Isaac Rich, Lee Claflin, and Jacob Sleeper, in 1869, and includes at present three colleges, four professional schools, and a post-graduate department of universal science. The College of Liberal Arts was opened in 1873. Its location is in the Beacon-street building, between the Athenæum and Park Street. It is distinguished for its high requirements for admission, and for the strictness with which it limits itself to purely collegiate instruction. For the present, the college

BOSTON UNIVERSITY SCHOOL OF MEDICINE.

MASSACHUSETTS HOMŒOPATHIC HOSPITAL.

avails itself of the laboratories of the Institute of Technology. The College of Music, established in 1872, is located in the Music-Hall building. This is the only institution of its kind in America, being intended for the graduates of the ordinary musical colleges and conservatories. The College of Agriculture was established in 1875 by an agreement with the Massachusetts Agricultural College at Amherst. The School of Theology, formerly the "Boston Theological Seminary," 36 Bromfield Street, was adopted by the university corporation in 1871. It is the oldest theological school of the Methodist Episcopal Church, but has long employed lecturers and instructors of other ecclesiastical affiliations also. The School of Law was the first in this country to present a three-years' course of study, and limits the degree of bachelor of laws to those candidates who had already taken the first degree in arts (A.B.). The school is at 36 Bromfield Street. The School of Medicine was the first one in the country to present courses of instruction four years in duration, and which (at the end of three-years' courses) confers the degree of bachelor of medicine or bachelor of surgery. Most of its Faculty are homœopathic in theory, but its statutes provide for the co-operation of any incorporated State medical society in the United States in the testing and graduation of students. A cut of its building on Concord Street is given on another page. For several years past the whole number of students attending the Schools of Theology, Law, and Medicine has exceeded the aggregate of the same classes of students in any other American university. The students, by special arrangements of the university officers, avail themselves of the great public libraries in the city: the university itself having no large library. The crowning department of the university is the School of All Sciences, organized exclusively for post-graduate instruction in liberal studies. With it are associated the faculties of the National University at Athens and the Royal University at Rome. It is claimed that Boston University was the first in the world to organize from the start and throughout without respect to sex. Ex-Gov. William Claflin, LL.D., is president of the board of trustees; and the Rev. William F. Warren, S.T.D., LL.D., is president of the university.

The Boston University School of Medicine is, like all other departments of the Boston University, open alike to both sexes. It was organized in 1873; and in the following year, by legislative act, the New-England Female Medical College, the first school to instruct women in medicine, was united with it. This school was one of the first to establish a regular graded course of instruction; and it has been the constant aim of the faculty to make this instruction as thorough, extensive, and practical as possible. For this purpose an optional year has been added, making the full course four years, with the privilege of gaining the baccalaureate degree at the end of the third year. The school is situated on East Concord Street, opposite the City

Hospital, and close by the Massachusetts Homœopathic Hospital. It has spacious grounds with large and convenient buildings, a library of 2,000 volumes, museum, chemical and microscopical laboratories, and extensive apparatus for teaching and illustration. From its proximity to hospitals and dispensaries, it gives its students excellent facilities for practical observation and instruction. The faculty includes 30 professors, lecturers, and instructors; and, although many of these are prominent homœopathic physicians, yet every department of medicine, surgery, and the collateral sciences receives proper attention. The success of this school has been quite remarkable: upwards of 600 students have been in attendance; and in the past seven years it has graduated 223 physicians, — one-third being women, — nearly all of whom are now engaged in successful practice. The dean of the school is I. T. Talbot, M.D., 66 Marlborough Street.

Boston College was founded in 1863 by the Fathers of the Society of Jesus, and it is conducted by them. It is located on Harrison Avenue, next adjoining the Church of the Immaculate Conception; and the value of its building and grounds is estimated at about \$200,000. The course is long and thorough, and classical studies occupy a prominent place in it. It has a corps of 16 professors and other instructors. The number of students is 150, and increases from year to year. J. J. O'Connor is the president.

Tufts College, on College Hill, Medford, is under control of the Universalist denomination. It is well endowed, enjoying the revenue of nearly \$1,000,000, and has several scholarships. It has a classical course of four years, a four-years' course for the degree of bachelor of philosophy, a three-years' engineering course, and a divinity school. The collegiate department has 12 professors and instructors, and the divinity school 5 professors and instructors and 1 lecturer. The president is Elmer H. Capen, who has held that office since 1875. The college was chartered in 1852, and opened in 1854. It has several commodious buildings, and occupies one of the most sightly spots about Boston.

The Massachusetts Institute of Technology was incorporated in 1861, for the purpose of instituting and maintaining a Society of Arts, a Museum of Arts, and a School of Industrial Science. The Society of Arts now numbers between 200 and 300 members, and meets at its rooms in the Institute building fortnightly. The Museum has been well started, and includes models of machinery, casts, prints, drawings, architectural plans, etc. The building is of pressed brick, with freestone trimmings, and stands on a lot of land granted by the State, bounded by Boylston, Clarendon, Newbury, and Berkeley Streets. The Institute receives government aid under the act of Congress designed to promote instruction in agriculture, the mechanic arts, and military science and tactics; is authorized to confer degrees, and is obliged to provide for military instruction. The school has

about 40 instructors and 350 students. There are ten courses,—those of civil and topographical engineering, mechanical engineering, geology and mining engineering, building and architecture, chemistry, metallurgy, natural history, science and literature, physics, and an elective,—each covering four years. A School of Mechanic Arts, in which special prominence is given to manual instruction, has also been established. The Institute has a large temporary building for shop-work and chemistry, a gymnasium, and

The Massachusetts Institute of Technology, Boylston Street.

a drill-shed where the students are trained in military tactics. In the Institute building proper, there are over 50 rooms, most of them being laboratories or lecture-rooms in the various departments. There is also a large and elegant audience-room, called Huntington Hall, with a seating capacity of 900. A restaurant is kept in the gymnasium. The president of the Institute is William B. Rogers, LL.D.

A school of industrial design is maintained, in connection with the Institute of Technology, by the Lowell Institute fund.

The Boston Public Schools, according to the recent report, comprise 466 general and 26 special schools in the city; of the former, 406 are primary, 49 grammar, 9 high, and 1 normal. Of the special schools, the

two for licensed minors are on North Margin Street and East-street Place; and the Horace Mann School for the Deaf is on Warrenton Street. The others are evening-schools, some for teaching the elementary branches, and others for the classical branches and drawing; and their annual winter sessions are held in school buildings in various parts of the city. In the general schools, during the school year 1880-81, there were 55,412 pupils, taught by 1,269 teachers; 70 licensed minors and about 75 deaf-mutes were also under instruction, besides 36 scholars in the kindergarten. The evening-schools had an average attendance of 1,694. The salaries of the teachers and officers for the year amounted to \$1,169,833.16. The system is under the control of the mayor, and board of school committee, a body of 24 persons, 8 of whom are chosen annually for a term of three years. The authority of the board is almost absolute, even in making appropriations from the city treasury; but the real work of managing the schools is delegated to the superintendent, Edwin P. Seaver, and the supervisors, Samuel W. Mason, Ellis Peterson, John Kneeland, Francis W. Parker, George A. Littlefield, and Lucretia Crocker,—a former member of the school committee, to which women have been eligible since 1874. This board of supervisors costs the city \$22,680 annually. All the general schools are strictly graded; and promotions take place twice a year, by a system of uniform examinations. The course of the primary-school is three years; of the grammar-school six years; and of the high-school three years, with advanced instruction in the two central high-schools. When preparing for college, boys at nine years of age, and girls at twelve, are admitted to their respective Latin schools, where the course for the former is eight years, and for the latter six years. The majority of the primary-schools throughout the city, and nearly all suburban schools, are mixed; but the tendency of the system is to separate the sexes in all but the youngest classes. A new programme of studies has been introduced in the past few years in which a great amount of oral teaching is prescribed, especially in the primary-schools. Grammar is superseded by what are called language-lessons, and the spelling-book is abolished. The metric system is to be taught, and natural philosophy and physiology are to be taken up in the higher grammar-classes. Drawing and music have long been taught as regular studies in all the schools, and sewing is taught in the lower half of the girls' grammar-schools.

The Boston Latin School is more interesting than any of the other schools, partly from its character as a preparatory school for college, and partly from its many traditions. It was founded in the year 1635, a long time before any other city school now existing, and ten years before any other school of its class in Massachusetts. Among its masters were Ezekiel Cheever, for 40 years; John Lovell, for 40 years; Benjamin

Apthorp Gould; Epes S. Dixwell; and Francis Gardner, who for 44 years was usher, sub-master, master, and head master. The present head master is

Moses Merrill.

The graduates have formed an association, and own a fine library of 3,000 volumes, which are kept in the school-building. The school itself owns a very good collection of objects illustrating the history and topography of Greece and Rome. In the school-building

The Old Boston Latin-School, Bedford Street.

ing stands a marble monument to the memory of graduates who fell in the civil war. The design is by Richard Greenough, and represents Victory holding out the wreath which has been earned by those whose names are inscribed on the pedestal beneath her feet. The first Latin-school stood on the site of the present City Hall, from which School Street derived its name. Afterwards it was removed to the site of the Parker House, thence to Bedford Street, and in 1881 to the new building described below.

The New English-High and Latin School building, which the city of Boston has just erected on the lot fronting on Warren Avenue, Montgomery and Dartmouth Streets, is the largest structure in America devoted to educational purposes, and the largest in the world used as a free public school. The building was begun in 1877; and that portion to be used by the schools was completed in the year 1880, at a total cost of about \$700,000. The Dartmouth-street front, which is to be occupied by the school-board and its officers, will be added hereafter. The structure is designed after the German plan, the principle of which is the hollow square with corridors following its outlines. All the schoolrooms front on the streets; and the width of the whole building is simply the width of a room and its corridor, thus insuring the best light and ventilation. There are 48 schoolrooms, each accommodating 40 pupils. The great court-yard is divided in the centre by

THE BOSTON ENGLISH-HIGH AND LATIN SCHOOL,
Warren Avenue, Dartmouth and Montgomery Streets.

corridors connecting with a "theatre" building, that contains two lecture-halls, with a seating-capacity of 225 each; with cabinet-rooms, and two library-rooms for both schools,—the Latin-school, with its front on Warren Avenue, and the English high-school, on Montgomery Street. The two schools are connected in the rear by a drill-hall and gymnasium, for the use of both schools in common, occupying the south side of the quadrangle. The chemical laboratory and a lecture-room will be in a detached building. The entire building will be, when completed, 420 feet long, and 220 feet wide. At present, without the administration building (as the part reserved for the school-board will be called), it is 339 feet long. It has three stories and a basement, the latter being a clere-story facing the courts. The style is a modern Renaissance; having all the lines of strength treated architecturally in stone, the frieze-courses inlaid with terra-cotta, while the background is of Philadelphia brick. Practically the building is fireproof throughout. Each of the schoolrooms is surrounded by brick walls, forming fireproof sections. The staircases are of iron; and the four that are in each building are in width proportioned to the number to be accommodated. Great care has been given to the sanitary regulations. The interior finish is of Michigan oak. The exhibition halls are arranged in amphitheatre form, 62 by 82 feet, and 25 feet high. The drill-hall is a grand feature. It is on the street-level, 130 feet long by 60 feet wide, and 30 feet high, with entrances from Warren Avenue, Montgomery and Clarendon Streets, and the court-yard. The floor is of thick plank, calked like a ship's deck, and is laid upon solid concrete. The hall can accommodate the whole school-battalion, and can also be used for mounted drill. The drill-hall, with its galleries, could seat 3,000 persons. It, and also the gymnasium above, of the same size, are both finished in natural materials, and treated so as to get a constructional effect of open timber-work, the wood being of hard pine, shellacked and varnished; the walls of Philadelphia brick, laid in bright red mortar, and trimmed with sandstone. The basement story and the court-yards are to be specially fitted up for play-room. The entire building, which makes an excellent model of good workmanship, a glory of the city, and a credit to the artisans, was designed by the city architect, George A. Clough.

The Normal School is in the third story of the Rice-school building, on Dartmouth Street; and the Rice school is now the Rice Training-school: which gives an opportunity to the Normal-school pupils to obtain some knowledge of the methods of teaching. The school was established in 1854, and is expressly for girls. The head master is Larkin Dunton.

The Girls' High-School, on Newton Street, occupies a large building, originally designed for the high and normal schools. It was completed in 1870, and at that time was believed to be the largest, most substantial, and

costly school edifice in the United States. The large hall in the upper story contains various casts from antique sculpture and statuary, the contributions of a number of gentlemen.

Of the many schools having interesting features we may mention the English high-school in the new Latin-school building, differing from the suburban high-schools only in being exclusively for boys, and in having male teachers, and a greater variety of educational apparatus. Among the grammar-schools at which one finds the best class of scholars are the Dwight,

The Girls' High-School, West Newton Street.

the Everett, and the Exeter-street: the last-named is the finest school-building in the city. In the Eliot, at the North End, one may find whole classes in which every member partly maintains himself, and in which every one is very poor. Only good disciplinarians can govern these children, and the traditions of the school are exceedingly amusing. A thorough system of gymnastics in use here was invented by Mr. Mason, one of the present supervisors, while he was

master of this school. The Emerson school, in East Boston, is among those famous for the penmanship of their scholars. The Rice primary-school occupies a position similar to that held by the Dwight and Everett among grammar-schools; and the Genesee-street primary is noted for the absolute poverty of its scholars. It is worth visiting, because the results of the primary-school system are more plainly evident than in schools attended by a better class of children. The difference between the slovenly little creatures who have been in the school a few weeks, and the neat, alert boys and girls of the upper classes, justify the Bostonian in assuming an air of pride as he asks, "What do you think of our public schools?"

The Private Schools of the city number about 100; and about 5,000 pupils find instruction in free denominational schools, so called, which are chiefly Catholic institutions.

The Chauncy-hall School, Nos. 259 to 265 Boylston Street, near Dartmouth Street, is a private school of high reputation, that was established in

1828 by the late G. F. Thayer. The present schoolhouse is the property of a corporation, composed chiefly of former pupils and patrons, of which George B. Chase is president, and Benjamin W. Gilbert is treasurer. The Chauncy-hall School is now conducted by William H. Ladd, late of Cushing & Ladd, as principal. The schoolhouse was originally in Chauncy Place, subsequently in Essex Street; and in 1873, the building having been burned, the present site was occupied. The building is excellently adapted to its

purposes, and unusual care has been devoted to proper ventilation, heating, etc.; while the furniture is on a new pattern, and is free from any tendency to cause injuries to health, the foundation of which is so often laid in school. The advantages of the division of labor in instruction and of the departmental system are thoroughly established by the experience of the managers. The school is designed to furnish a complete course of school-education,

The Chauncy-hall School, Boylston Street.

beginning with the kindergarten and the primary school, and continuing through the upper departments in preparation for the university, the Institute of Technology, or for business. Military drill is practised three times a week, and there is an excellent gymnasium. There is also a laboratory in the school-building. Special students are admitted to participate in the lessons of such classes as they choose and are fit for. Girls are admitted to the classes of the primary and upper departments and as special students.

The **Massachusetts Normal Art-School** was established by the State in 1873, as a training-school, for the purpose of qualifying teachers and masters

of industrial drawing. Its chief aim at present is to prepare teachers for the industrial drawing-schools of the State, who can also direct and superintend the instruction in this branch in the public schools. The demand for these teachers is the result of an act passed by the legislature in 1870, making instruction in this branch obligatory in the public day-schools, and requiring cities and towns containing more than 10,000 inhabitants to provide free instruction in industrial drawing to persons over fifteen years of age. This school occupies the building formerly known as the "Deacon House," at the South End, on Washington Street. All students are over sixteen years of age, and are charged as follows: residents of the State, no tuition, but \$20 a year for incidental expenses; non-residents, only a tuition of \$100 a year. The director of the school is Henry Hitchings.

The **New-England Conservatory of Music** at Boston, under the direction of Dr. Eben Tourjée, is one of the largest and best-appointed musical institutes in the world. Of this worthy institution and its already celebrated founder, "Harper's New Monthly Magazine" said:—

"Twenty-five years ago there was nothing in this country deserving the name, if it aped the title, of a music-school. Eben Tourjée, then scarcely more than a lad, seeking vainly for instruction and advantages that to-day are within reach of the humblest, resolved, with that one idea, persistency, which from time immemorial characterizes great reformers, that one day there should exist in this land a school of music, where art should be placed on the same footing as other studies in our higher institutions of learning; where it should not be viewed merely as an accomplishment, but rather as an integral part of a well-rounded, complete education, to be pursued, not spasmodically, but with systematic thoroughness. In 1851 young Tourjée unfolded his plans for a music-school to one whose specialty lay in the direction of commercial training. This gentleman proposed a joint commercial and musical college,—a union which strikes one like the proposition of a would-be Yankee Meyerbeer to set the Constitution to a symphony. Fortunately for the true progress of music, this idea was [never entertained by Tourjée, and] never developed. But in 1853 we find Mr. Tourjée endeavoring to interest prominent musical and educational professors in Boston in his project for a musical conservatory, to embrace the best elements of the foreign schools. All professed interest, but condemned the scheme as visionary. The capital could never be raised; there would not be pupils enough to form classes, or warrant the employment of suitable teachers; in short, if it ever was to be done, Mr. Tourjée must do it himself, raise a fund, start a college, and get himself elected president,—a mocking prophecy, which ere long brought its own fulfilment. Nothing daunted, through 1853-54 Mr. Tourjée continued his classes in piano, organ, voice; and, never losing sight of his central thought, he found time to issue and

conduct an able little paper, called 'The Key-Note,' in which he endeavored to encourage the study of music on a higher basis than that usually pursued, indicating with prophetic utterance the future of music in this country." From that time Dr. Tourjée's whole efforts have been directed to the advancement of the musical culture not only of the few, but also of the many. An exceedingly interesting history could be written of his labors and successes; but the grand result is shown in the New-England Conservatory, for in it he has been favored with the patronage of more than 27,000 persons, and through it he gives instruction to more than 1,000 persons annually. To him are the people all over the country indebted for the conservatories patterned after the grand institution for which he laid the foundation, and which he has built up successfully. We have not the space to give the details of the workings of this institution; but one item shows somewhat the good that it is doing the people. Here, under a board of instruction comprising 75 of the best teachers of music in New England, many of whom have national reputations, a person can obtain 152 hours instruction in music for the sum of \$15. The New-England Conservatory was established in 1867, and now occupies 28 rooms in the Music-Hall building.

The Lowell Institute, one of the most unique of the educational institutions of Boston, was established in 1839, by the munificence of John Lowell, "to provide for regular courses of free public lectures upon the most important branches of natural and moral science, to be annually delivered in the city of Boston." Besides the School of Industrial Design connected with the Institute of Technology, two drawing-schools were until 1878 maintained by this fund. The Lowell Institute lectures are now given in the hall of the Institute of Technology.

The Simmons Female College, for the purpose of teaching "medicine, music, drawing, designing, telegraphy, and other branches of art, science, and industry best calculated to enable the scholars to acquire an independent livelihood," was provided for by the will of John Simmons in 1870. He left store and dwelling property in the city, valued at the time at about \$1,400,000, the income from which, under certain conditions and after certain payments, was to be applied to the establishment of the college. But a portion of the property having been destroyed in the Great Fire, and the income being seriously impaired by the cost of rebuilding and the depression in business, nothing has been done by the trustees to carry out the project.

The American College and Education Society, with its office at No. 10 Congregational House, has for its objects the promotion of Protestant theological education; and with this purpose it aids Western colleges, and many young men, candidates for the ministry. Charles Benedict of Waterbury, Conn., is president; and Increase N. Tarbox, D.D., secretary. It is unsectarian, though its funds and students are drawn chiefly from Congregational sources.

The Society to Encourage Studies at Home, organized in 1873, has met with remarkable success, which it seems to fully merit. Its purpose is to induce young ladies to devote some part of every day to thorough and systematic study. To carry out this purpose, courses of reading and plans of work are arranged, and thorough directions and advice are given; and finally an annual meeting is held, where the students can meet the instructors. The instruction is given by more than 100 correspondents. During the past year there were 899 students, of whom 343 selected history; 347 English literature; 139 science; 114 art; 49 German; and 29 French. The society also owns a library, from which books are sent everywhere to its members. The cost of membership is \$2.00 a year, merely to cover the incidental expenses. The secretary is Miss Anna E. Ticknor, daughter of the late George Ticknor; and communications are to be sent to her by mail, addressed to No. 9 Park Street.

The American Metric Bureau occupies a part of the second story of 32 Hawley Street, in the "book-district" of Boston. It is an important educational society, and is composed of professors in colleges, teachers in high schools, superintendents of education, and many persons from all professions, and from every line of business. It is introducing the International Decimal System of Weights and Measures. It has the largest collection extant of charts, books, apparatus, weights, and measures, illustrating the metric system, and forming a Metric Museum of more than 1,000 different articles, that are freely exhibited and explained to all interested. The secretary and three assistants have charge of the office, and give copies of explanatory pamphlets to all applicants, or mail them without charge. The Bureau is incorporated, the same as the Bible Society, as a missionary society for educational purposes. It sent out the first year over a half-million pages, illustrating the system, and explaining its advantages. Visitors to Boston are often taken to the Bureau as one of the curiosities of the "City of Notions," as nothing of the kind can be seen elsewhere.

The American Library Association is in the same office with the American Metric Bureau, and is composed of the leading librarians of the country, and aims to increase the number of readers, improve their methods, raise the standard of reading, and reduce its cost. The work is done through the free public libraries. The visitor's interest in the office lies in the Bibliothecal Museum, comprising a collection of catalogues, reports, and other library publications, and thousands of blanks, devices, and appliances of every sort used in libraries at home or abroad. These are arranged both by libraries and by subjects. Of still greater interest to public or private librarians are the working models recommended by the Association. These include nearly every thing tangible that pertains to the successful management of a library. The whole collection is fully and freely explained to

visitors. The Secretary of the Library Association is Melvil Dui; and the editor of "The Library Journal," the official publication of the libraries both of this country and of Great Britain, is Charles A. Cutter.

The Spelling Reform Association is the thurd soçjeti having hedkwertera hîr. This is veri lik the Metric Büro in its membership and methoda. Its object and meto is 'Fhê Simplificafun ev Inglish Orthografi.' It cêzez matur tu bî printed and ritn in the nû speling, distribûts pamphlets, explana the nû method, and the vîtal impertans ev the reform tu eni progres in pepûlar edücafun. The Roxbury Latin School is the popular name of "The Grammar School in the easterly part of the Town of Roxbury." It was founded in 1645, and among its founders were the Apostle John Eliot, Gov. Thomas Dudley, and many others whose names are well known to the people of New England. Although the school is free to residents of Boston, it is controlled by a board of trustees, and is not a part of the public school system. Its support is chiefly from the income of a tax voluntarily imposed upon certain citizens of Roxbury. It has also received several bequests from individuals, and some aid from the city of Roxbury. It was incorporated in 1789; and since then it has been a close corporation, in which the trustees fill any vacancies that occur in their board. Among the teachers at this school before the Revolution, were Judge William Cushing, Gen. Joseph Warren, the Rev. Bishop Samuel Parker, and Gov. Increase Sumner; and since then the lists of both teachers and pupils have had the names of scores of men whom the whole country has honored. The school has now two six-years' courses — one of which is an English course, and the other a course preparatory for college, and especially for Harvard, where the examinations are the most comprehensive of any American college. The Roxbury Latin School stands equal in rank, and second in age, to any school of its class in this country. Its building is a large plain wooden structure on Kearsarge Avenue, and comfortably accommodates its present number of pupils, about 130. The head master, William C. Collar, is highly esteemed as one of the ablest teachers the school has ever had.

The Perkins Institution and Massachusetts School for the Blind is situated on Broadway, Mount Washington, South Boston, in a large building formerly a hotel, which, as the ground is quite high, is a prominent object from the harbor and from the country for miles around. The institution was founded in 1829, and was organized in 1832 by Dr. Samuel G. Howe, beginning with six blind children in his father's house. It is named in honor of Col. Thomas H. Perkins, one of its most generous friends, who gave his mansion-house on Pearl Street for its use. It is notable as being the first institution in the world where a systematic education of the blind was attempted; and its success was so great that it has been a model for other institutions of the kind, both in America and Europe. The family system is followed; and the women and girls occupy dwelling-houses by themselves,

The Perkins Institution and Massachusetts School for the Blind, Broadway, South Boston.

the sexes being separated. The average number of inmates is about 160. Music has been taught here with such success that the tuning, and keeping in repair, of all the pianos in the public schools of Boston are now intrusted to the pupils of the Institution, to the satisfaction of the school committee, the music teachers, and the public. The first books for the blind produced in this country were printed at the Perkins Institution; and during the past year several standard works have been electrotyped. This department is carried on with much vigor. The institution is partly self-supporting from the income of invested funds. It receives compensation from several States for the support and education of beneficiaries, and from Massachusetts a grant of \$30,000 annually. Dr. Howe continued in charge until his death in 1876. Samuel Eliot is president, and M. Anagnos secretary and director. Visitors are admitted on Thursdays from 11 A.M. to 1 P.M.

The Episcopal Theological School, on Brattle Street, Cambridge, was incorporated in 1867, for the preparation of young men for the ministry. Its founder, Benjamin T. Reed of Boston, desired that the advantages of Cambridge be available for those seeking that sacred calling in the Episcopal Church; and it has been the aim of the authorities of this Seminary to maintain the standard of scholarship at the highest point. For admission, it is required that the applicant be a Bachelor of Arts, or submit to an examination implying equal proficiency. Its group of buildings is of singular beauty and uniformity, and is most pleasingly situated. It comprises St. John's Memorial Chapel, erected by the late R. M. Mason; Lawrence Hall, the dormitory, erected by Amos A. Lawrence; Reed Hall, the library, erected by the founder; Burnham Hall, the refectory, erected by John A. Burnham; and the Deanery. The dean of the institution is the Rev. Geo. Zabriskie Gray, D.D.

Private Classical Schools for preparing boys for colleges, especially for Harvard College, include the schools of George W. C. Noble, 40 Winter Street; John P. Hopkinson, 20 Boylston Place; E. R. Humphreys, 126 West-Chester Park; Henry Dame, 18 Boylston Street; Charles W. Stone, 36 Temple Place; and Herbert B. Cushing, 170 Newbury Street.

Commercial Colleges for fitting young men and women for business life include Bryant & Stratton's, 608 Washington Street; Burdett's, 169 Tremont Street; Comer's, 666 Washington Street; French's, 459 Washington Street; Reckers & Bradford's, 18 Boylston Street; George A. Sawyer's, 161 Tremont Street; and the Boston Commercial College of William H. Moriarty, 442 Washington Street.

The Sisters of Notre Dame have a novitiate boarding and day school on Washington Street, Boston Highlands. The school was established in 1854, under the auspices of the Right Rev. Bishop Fitzpatrick. The grounds include six acres, and afford delightful facilities for healthful exercise. The building is a large four-story structure, of brick with granite trimmings. Since the establishment of the novitiate, a part of the building has been reserved for its needs, and the number of pupils has been limited to 100. The school is self-supporting; the tuition, including board, being \$200 a year.

Other Catholic Schools and Convents include the Notre Dame Academy and Convent, Berkeley Street, near Boylston Street; St. Joseph's Convent, Broadway, between Dorchester and A Streets, South Boston; St. Aloysius Convent at East Boston; St. Joseph's Convent at Jamaica Plain; and nine parochial and free schools scattered throughout the districts of Boston. Some of these schools are very large, such as St. Mary's on Cooper Street, at which there are 700 boys; St. Mary's on Lancaster Street, 625 girls; SS. Peter and Paul on Broadway, between Dorchester and A Streets, South Boston, 900 girls; and the Most Holy Redeemer, East Boston, 1,165 girls.

The Horace Mann School for the Deaf, formerly on Pemberton Square, is now on Warrenton Street. It was founded in 1869, and was, until 1877, called the "Boston Day-School for Deaf Mutes." There are about 70 pupils, boys and girls. The plan of separating the pupils who were born deaf, and those made deaf by disease, is carried out as far as practicable. Professor A. Melville Bell's system of visible speech is employed throughout the school as an aid in teaching articulation. The school is free for both sexes, residents of the city, and a moderate fee for others; and it is supported mainly by taxation.

The Boston Asylum and Farm-School for Indigent Boys was formed by the union of the Boston Asylum for Indigent Boys, which originated in 1813, and the Proprietors of the Boston Farm-School, established in 1832. It was incorporated in 1835. Its object is to provide a home and training for homeless boys, and those who have lost one or both parents. Boys received into the institution as boarders can be taken away at any time, but others are held until the directors apprentice them. The average number in the school is 100. It is pleasantly situated on Thompson's Island.

The Massachusetts School for Idiotic and Feeble-Minded Youth, the oldest establishment of its kind in America, was opened in 1848 with three private pupils and ten State charges; and it now cares for about 128 a year, 75 of whom are beneficiaries of the State. The average number of inmates is about 120. The late Dr. Samuel G. Howe was its founder and organizer, and remained at its head as superintendent until his death in January, 1876. The pupils are instructed by teachers possessing special qualifications, and a workshop is provided, in which those who can learn are taught trades. The schoolhouse is in South Boston.

The Boston City Hospital Training-School for Nurses was established in 1878 to give a two-years' course of training to women desirous of becoming professional nurses. The superintendent of nurses at the City Hospital, Miss Almira C. Davis, has charge of the Training-School, under authority of the superintendent of the hospital, Dr. George H. M. Rowe.

The Educational Periodicals of Boston are "Education," a bi-monthly magazine, 112 pp.; "The Journal of Education," New England and National, weekly; "The Primary Teacher," monthly; and "Good Times," monthly. These periodicals were established by Thomas W. Bicknell, LL.D., formerly commissioner of public schools in Rhode Island; and he continues to edit "The Journal of Education" and "Education," and is the publisher of all. W. E. Sheldon edits "The Primary Teacher," and Mrs. M. B. C. Slade edits "Good Times." These publications received the first premiums at Paris as the leading educational journals of the world.

The Soul of the City.

THE RELIGIOUS ORGANIZATIONS,—THEIR PLACES OF WORSHIP,
AND THEIR PASTORS.

THE first meeting-house in Boston was a small, homely building, with mud walls and thatched roof. The accompanying illustration from

First Meeting-house in Boston.

rebuilt in 1713, and in 1808 torn down.

The "First Church" society (Congregational Unitarian), of which Rufus Ellis, D.D., is pastor, built another church in Chauncy Place the same year, which in 1868 gave place to the present fine church building at the corner of Berkeley and Marlborough Streets. This church cost about \$325,000, and is a beautiful structure. It accommodates about 1,000 persons, has a very fine organ, windows of stained glass, an exterior carriage-porch of unique design, and is elegantly finished. The music is equal to that of any other church in Boston. The architects were Ware & Van Brunt of Boston.

"Harper's Weekly" is said to give a fair idea of its outward appearance. It stood near the head of State Street. It was erected in 1632: John Wilson and John Cotton were its pastors. In 1639 this house of worship was succeeded by a more pretentious structure on Wash-
ington Street, where Rogers
ing now stands. This
was burned in 1711,

The "First Church," Berkeley Street.

The second church in the city was built in 1649, in North Square. The first Roman Catholic in 1789; the first Methodist (church on Hanover Avenue) in 1796; the first Universalist (church corner of Hanover and Bennett Streets) in 1785.

The early church history of Boston is full of interest, but the details are too voluminous to be given here.

The Old South, corner of Washington and Milk Streets, is the most famous meeting-house in Boston, by reason of its historical associations. The Old South Society was organized in 1669; and the meeting-house was built soon afterwards on a piece of land given by Mrs. Norton, widow of the Rev. John Norton. In 1729 the original meeting-house, which was of wood, was taken down, and the present brick structure was built on the same spot.

The Old South, Washington Street.

It is one of the most famous "landmarks" of old Boston, and one of the few historic buildings that have been allowed to remain standing in this iconoclastic age and country. The associations that cluster around the Old South are certainly of a nature that should make the building precious in the eyes of patriotic citizens. Benjamin Franklin was baptized and attended worship here; Whitefield preached here; the revolutionary agitators made use of the edifice to stir up the citizens against the tyranny of their king; Warren here delivered his famous speech on the anniversary of the Boston Massacre; the "tea-party" organized within these walls; and here the annual election sermons were for many years delivered. In 1775 the church was used as a riding-school by the British troops.

The great fire of 1872 stopped just before reaching the Old South, burning all around it on two sides. The society abandoned this place of worship (which was used as the post-office for a while after the fire), and erected a new building on the Back Bay. Since then its preservation has been vigorously striven for by a small part of the community, but its fate seems

THE OLD SOUTH CHURCH, BOYLSTON STREET.

yet problematical. The land on which the church stands is valuable for business purposes, owing to its central location. The Old South Preservation Committee has done its best towards saving the building, and various entertainments, fairs, lectures, and grand balls have been given to this end; but the sum (\$400,000) required to purchase the church has not at this writing been raised. The ministers of this society from its formation are: Thomas Thatcher, Samuel Willard, Ebenezer Pemberton, Joseph Sewall, D.D., Thomas Prince, Alexander Cumming, Samuel Blair, John Bacon, John Hunt, Joseph Eckley, Joshua Huntington, Benjamin B. Wisner, D.D., Samuel H. Stearns, G. W. Blagden, D.D., and J. M. Manning, D.D., the present pastor. The Old South is a plain brick building, painted light, with a tall spire. The belfry is surrounded by an exterior gallery. The house is 88 by 61 feet in dimensions, and has a sounding-board and two tiers of galleries. A tablet above the Washington-street entrance gives the dates of the formation of the society and the building of the two church edifices. The building is now an historical museum, made interesting to the masses of the people by the exhibition of new inventions, such as the phonograph and microphone. The entrance-fees go towards raising the preservation fund.

The Old South Church, successor to the historic "Old South" (on the corner of Washington and Milk Streets), is at the corner of Dartmouth and Boylston Streets. It is a large and costly structure, including, besides the church, a chapel and parsonage. The seating capacity is between 800 and 900, and the building covers an area of 200 by 90 feet. It is of Roxbury stone, with freestone trimmings; and the interior finish is of cherry. The massive tower, which forms the most noticeable feature of the structure, is 235 feet high. Over the centre of the main church edifice rises a large lantern of copper, with 12 windows. An arched screen of Caen stone, with shafts of Lisbon marble, separates the church from the main vestibule. A carved screen of wood encloses the pulpit, and three panels of Venetian mosaic fill the heads of the arches leading from the doorways. The stained-glass windows were brought from England, and are decorated with biblical scenes. This edifice, erected at a cost of about \$500,000, is generally considered one of the finest specimens of church architecture on the continent. The interior decorations are elaborate; the pronounced tints of the walls, the large chandeliers, and the rich carvings producing a striking and beautiful effect.

King's Chapel, corner of Tremont and School Streets, was the first Episcopal church in New England, and is now a Unitarian church. The society was organized in 1686, and a little wooden church was erected in 1689. Robert Ratcliffe was the first rector. The church was enlarged in 1710; but in 1754 it was taken down, and replaced by the present substan-

tial stone building. The liturgy was altered in 1785, and has been used as amended ever since. In 1787 James Freeman became the pastor; and the connection of the society with the Episcopal church ceasing, it became a Unitarian church. The present pastor is Henry W. Foote. King's Chapel is a very quaint and interesting place. The interior, with its high, old-fashioned pews, its tall pulpit and sounding-board, its massive pillars, and stained-glass window, is remarkably attractive. In 1878 the city discussed the plan of removing King's Chapel with its adjoining burial ground, and erecting a courthouse in their place.

King's Chapel, Tremont Street.

Christ Church, Salem Street, which was built by the Episcopalians in 1723, is the oldest church edifice now standing in Boston. The building which is of brick, is 70 by 50 feet in dimensions, and the steeple is 175 feet high. It is the most prominent landmark of the North End, and was formerly known as the "North Church." The steeple accurately represents one that was blown down in 1804. The tower contains a fine chime of eight bells, which bear the following inscriptions:—

First bell: "This peal of 8 Bells is the gift of a number of generous persons to Christ Church, in Boston, N.E., anno 1744, A.R." Second: "This church was founded in the year 1723; Timothy Cutler, D.D., the first rector, A.R., 1744." Third: "We are the first ring of Bells cast for the British Empire in North America, A.R., 1744." Fourth: "God preserve the Church of England, 1744." Fifth: "William Shirley, Esq., Governor of the Massachusetts Bay in New England, anno 1744." Sixth: "The subscription for these Bells was begun by John Hammock and

Robert Temple, church wardens, anno 1743; completed by Robert Jenkins and John Gould, church wardens, anno 1744." Seventh: "Since Generosity has opened our mouths, our tongues shall ring aloud its praise.

Christ Church, Salem Street.

1744." Eighth: "Abel Rudhall, of Gloucester, cast us all, anno 1744." This chime, brought from England, is the oldest in America. The Bible, prayer-books, and silver now in use, were given, in 1733, by King George II. The figures of cherubim in front of the organ, and the chandeliers, were taken from a French vessel by the privateer "Queen of Hungary," and presented to this church in 1746. The Sunday school was established in 1815, when no other was known to exist in America. Christ Church reported to the last convention 150 communicants.

The interior of the church still retains an antique appearance. The present rector is Henry Burroughs, D.D.

A tablet was placed on the front of Christ Church in 1878, bearing the following inscription:—

THE SIGNAL LANTERNS OF
PAUL REVERE
DISPLAYED IN THE STEEPLE OF THIS CHURCH
APRIL 18 1775
WARNED THE COUNTRY OF THE MARCH
OF THE BRITISH TROOPS TO
LEXINGTON AND CONCORD.

Trinity Church, at the intersection of Huntington Avenue, Boylston and Clarendon Streets, is the finest church edifice in New England, if not in the

THE NEW TRINITY CHURCH, BOYLSTON STREET.*

United States. The history of Trinity parish dates as far back as 1728. Its first church, built in 1735, was a plain wooden building with gambrel roof, at the corner of Summer and Hawley Streets; and its first rector was Addington Davenport. In this wooden building the parish worshipped until 1828, when the corner-stone of a new house was laid in the same location; and the solid Gothic structure then erected was used by the parish till it was burned in the great fire of 1872. In the winter before this disaster, the subject of a new church edifice had been left to the direction of a building committee; and eventually the designs of Gambrell and Richardson, architects, of New York, were accepted. The new church was completed early in 1877. In sinking the foundations an immense amount of labor was performed; and, on account of the nature of the Back-bay land, it was found necessary to somewhat modify the original design. The church was consecrated on Feb. 9, 1877; the bishop of the diocese conducting the services. Four prelates of the church, many clergymen, the governor, the mayor, and a large number of notables, were present. Trinity Church is in the pure French Romanesque style, in the shape of a Latin cross, with a semi-circular apse added to the eastern arm. The clerestory is carried by an arcade of two arches only. Above the aisles a gallery is carried across the arches, which is called the "triforium" gallery, and serves to connect the three main galleries, one across either transept and one across the west end of the nave. The whole interior of the church and chapel is finished in black walnut, and the vestibules in ash and oak. A great central tower, 211 feet high, surmounts the building, rising from four piers at the crossing of the nave and transept. The tower is very conspicuous, owing to its massive form, and is the main feature of the edifice; the nave, transepts, and apse being subordinate to it. A handsome and unique chapel is connected with the main structure by an open cloister, the effect of which is exceedingly pleasing. The extreme width of the church across the transepts is 121 feet, and the extreme length is 160 feet. The chancel is 57 feet deep by 52 feet wide. The tower is 46 feet square inside. The material employed in the body of the church is Dedham granite, ornamented with brown freestone trimmings. The exterior of the apse is decorated with mosaic work of polished granite. In the interior work special attention has been paid to the decorations, which form an enduring monument to the artistic taste of John La Farge of New York. No such decorations can be found in any other church in this country. The stained-glass memorial windows were made in Europe. The church resembles many of those cathedrals in the south of France, which all the world has recognized as models in a noble school of ecclesiastical art. The cost of the building was \$750,000. The parish has no debt, and is exceedingly wealthy. Some of the greatest preachers in the Episcopal denomination have graced the pulpits of the old Trinity churches.

Among these have been George Washington Doane, afterwards bishop of New Jersey; John Henry Hopkins, once bishop of Vermont; Thomas March Clark, afterwards bishop of Rhode Island; Manton Eastburn, the last bishop of this diocese; and Jonathan M. Wainwright, once bishop of New York. The rector of the present church is the most famous preacher in the denomination, Phillips Brooks, D.D., a graduate of Harvard College. He is much beloved by his parishioners, and esteemed and admired by every one for his eloquence, his earnestness, and his polished and scholarly style.

The Arlington-street Church (Unitarian), corner of Arlington and Boylston Streets, has an eventful history. The society was formed in 1727 as a Presbyterian church. A barn on Long Lane (now Federal Street) was the first place of worship. In 1744 a church building replaced the barn on the same spot. In this building the United States Constitution was adopted in 1788 by the State convention: hence the name of Federal Street. A new brick church was built in 1809, on the same site; but in 1859 this was taken down, and the present handsome building on Arlington Street was subsequently erected. In 1786 the Presbyterian had been exchanged for the Congregational form of government. W. E. Channing, D.D., was pastor of this church from 1803 till 1842, and here made his reputation as an accomplished scholar, writer, and preacher, during this period. His successor was Ezra

The Arlington-street Church, corner of Boylston Street

S. Gannett, D.D., who was killed in the terrible railroad accident at Revere in 1871. The recent pastor was J. F. W. Ware. The church is of freestone, and is very handsome. It has a shapely spire, and a fine chime of bells. On the Boylston-street side, the building is almost entirely covered with clinging vines.

St. Paul's Church was built in 1820, and consecrated by the Episcopal

St. Paul's Church, Tremont Street.

bishops of Massachusetts and Connecticut. It stands on Tremont Street, between Winter Street and Temple Place, facing the Common. It is in the Grecian style of architecture, of the Ionic order. The walls are of gray granite, and the portico and columns are of Potomac sandstone. The interior is handsome. The ceiling is a cylindrical vault, with panels which span the whole width of

the church. Its rectors have been Samuel F. Jarvis, D.D., Alonzo Potter, LL.D., afterwards bishop of Pennsylvania, John S. Stone, D.D., Alexander H. Vinton, D.D., William R. Nicholson, D.D., and Treadwell Walden. William Wilberforce Newton is the present rector.

The Hollis-street Church was originally built in 1732. It was a little wooden building: and the first minister was Mather Byles, a Tory, a wit, and a scholar. The church and the street were named after Thomas Hollis of London, one of the greatest benefactors of Harvard University. The meeting-house was burned in 1787, and another built. In 1810 the latter was removed to give place to the present structure. The steeple is nearly 200 feet high. Dr. Samuel West, John Pierpont, and Thomas Starr King were pastors of this church. The tablets in the church bearing the Ten Commandments were the gift of Benjamin Bussey, another of Harvard's greatest benefactors. The old church was used as a barrack by the

British soldiers during the siege of Boston. The society (Unitarian) in the autumn of 1878 was without a pastor, George L. Chaney having resigned early in the year. The pastor is Henry B. Carpenter.

The Central Church (Congregational Trinitarian), corner of Berkeley and Newbury Streets, is a handsome building of Roxbury stone with sandstone trimmings. It cost over \$325,000, and was dedicated in 1867. The spire, 236 feet high, is the tallest in the city; and the interior of the church is exceedingly handsome. The society first worshipped in the old Federal-street theatre, and later in a plain church-building on Winter Street. W. M. Rogers was the first pastor. The pastor is Joseph T. Duryea, D.D.

The Park-street Church, corner of Park and Tremont Streets, was erected in 1810, and cost about \$50,000. It is of brick, with a fine spire; and the interior

is commodious though plain. The society was organized in 1809. Nine of the members of the Old South, which was then the only evangelical Congregational church in Boston, came out from the parent church under the promptings of a revival movement. Park-street Church was begotten in a revival, and has enjoyed many in her history. E. D. Griffin, S. E. Dwight, Ed-

Park-street Church, Tremont Street.

ward Beecher, J. H. Linsley, Silas Aiken, A. L. Stone, and W. H. H. Murray were pastors of this church. The present pastor is J. L. Withrow, D.D. Several churches have grown out of the Park-street Church. Many of the missionary societies of the Orthodox denomination have been started within its walls. The church has always been deeply enlisted in the work of foreign missions, giving \$4,000 and upwards each year to that cause. Until July, 1878, the church had always been in debt; but all incumbrances were then removed, and the church repaired and painted.

The First Parish Church (Unitarian), Meeting-House Hill, Dorchester district, is the oldest religious society in Boston. It was organized in Plymouth, England, March 20, 1630, the eve before the embarkation of the first settlers of Dorchester in the "Mary and John." John Maverick and John Warham were the first ministers. The first religious service held was in the open air in Dorchester, the Sunday after their settlement, in June, 1630. The first meeting-house was built in 1631, at the corner of Pleasant and Cottage Streets. It was a log house, protected with palisades against the Indians. In 1645 a more expensive structure was erected on the same spot. In 1670 it was moved to Meeting-House Hill, which derived its name from the church which for over 200 years has remained on this site. In 1677 it was succeeded by another which cost £200. In 1743 a new house was built, which stood until the erection, in 1816, of the present structure. This church has had, including Maverick and Warham, who were associated together, and excluding two coadjutors who for a short time assisted Richard Mather, only eight successive ministers in a period of nearly 250 years. The list is as follows: Richard Mather, 33 years, with Jonathan Burr and John Wilson, jun., associates, both of whom he survived as pastor; Josiah Flint, 9 years; John Danforth, 48 years; Jonathan Bowman, 44 years; Moses Everett, 19 years; Thaddeus Mason Harris, 43 years; and Nathaniel Hall, 40 years. Samuel J. Barrows was ordained in 1876, and in 1880 retired to become editor of "The Christian Register," the organ of the Unitarian denomination.

The Union Temple Church, worshipping in Tremont Temple, is one of the largest Baptist societies in America. This society was organized in 1863 by the consolidation of the Tremont-street Church with the Union Church. The first pastor was J. D. Fulton, D.D. George C. Lorimer, D.D., now of Chicago, succeeded Dr. Fulton. The present pastor is F. M. Ellis, D.D. The Union Temple Church is a free church, and discards the pew system, depending largely for its pecuniary resources on the voluntary subscriptions and contributions of the congregation. There is a large Sunday school connected with the church, and also a young men's organization called the Temple Union. The congregations at the Temple are very large. The church is also called the "Stranger's Sabbath Home."

The Metropolitan Church holds its service in Horticultural Hall, Tremont Street. It is a popular church; good sermons, choice singing, and fine organ music tending to draw large congregations from down-town residents and strangers. The pastor is Henry A. Shorey.

The Central Congregational Church of Jamaica Plain (West-Roxbury district, Boston) was organized in 1853 under the name of the Mather Church. Services were held in the Village Hall until 1856, when a newly-built church edifice on Centre Street was dedicated. In 1866 the name of

the society was changed from the Mather Church to the Central Congregational Church. In 1871 the society sold its house of worship on Centre Street, purchased a lot of land on the corner of Elm Street and Seaverns Avenue, and began the erection of a new house, which was completed and dedicated in 1872. George M. Boynton is the pastor.

St. John's Church, Tremont Street, between Vernon and Clay Streets, Boston Highlands, was built as a chapel of St. James Church, and was opened in 1867. In 1871 it became an independent parish, and the following year the building was enlarged. George S. Converse, formerly rector of St. James Church, is the rector. The church is free, and will seat about 500. The society is Episcopalian.

The German Lutheran Trinity Church, of the unaltered Augsburg Confession, is an unpretending little building on Parker Street, Boston Highlands,

Central Congregational Church, Jamaica Plain.

German Lutheran Trinity Church, Parker Street.

which has been occupied by the German Evangelical Lutheran Trinity Society since 1871. The building was formerly known as Day's Chapel. Adolf Biewend is the pastor. A parochial school is conducted in the basement. The services are in the German language.

The Cathedral of the Holy Cross on Washington Street, at the corner of Malden Street, is the largest and finest Catholic church in the city. It was dedicated in 1875. The building measures over 46,000 square feet, and covers more than an acre of ground. In this respect it takes precedence of the Cathedrals of Strasbourg, Pisa, Vienna, Venice, Salisbury, and Dublin.

The style is the early English Gothic, cruciform, with nave, transept, aisle, and clerestory, the latter being supported by two rows of clustered metal pillars. The total length of the building is 364 feet; width at the transept, 170 feet; width of nave and aisles, 90 feet; height to the ridge-pole, 120 feet. There are two main towers in front and a turret, all of unequal height, and all eventually to be surmounted by spires. The great tower on the south-west corner with its spire will be 300 feet high, and the small tower on the north-west corner will be 200 feet high. The gallery contains a Hook & Hastings organ of unsurpassed purity of tone and remarkable power. It has more than 5,000 pipes. It has 78 stops, besides 5 pneumatic knobs and 12 combination pedals. The entire interior of the cathedral is clear space, broken only by two rows of columns extending along the nave and supporting the central roof. The pews accommodate nearly 3,500 persons. The arch which separates the spacious front vestibule from the church is of bricks taken from the ruins of the Ursuline convent of Mount Benedict. The ceiling abounds in carved wood and tracery. The panels and spandrels show three shades of oak, with an outer line of African wood. Every alternate panel is ornamented with emblematic devices. The roof in the transept displays an immense cross of inlaid wood. On the ceiling of the chancel are painted angels representing Faith, Hope, Charity, and other virtues, on a background of gold. The frescoing on the walls is very handsome. The rose window over the principal entrance is in design a fine specimen of art. The stained transept windows, each 40 by 20 feet in size, have designs representing the exaltation of the cross by the Emperor Heraclius, and the miracle by which the true cross was verified. The stained windows in the chancel represent the Crucifixion, the Ascension, and the Nativity. These are memorial windows, and were gifts to the church. There are 24 smaller windows of stained glass, representing biblical subjects, in the clerestory of the transept and of the chancel. The sanctuary terminates in an octagonal apse. The high altar is formed of rich variegated marbles, and is to be surmounted by a fine canopy. On the Gospel side stands the Episcopal throne, the *cathedra* of the Bishop. On the right of the sanctuary is the chapel of the Blessed Virgin, containing a marble statue of the Virgin. There are three other chapels, — the chapel of St. Joseph, the chapel of St. Patrick, and the chapel of the Blessed Sacrament. The large vestry is between the chapel of the Blessed Sacrament and the sanctuary. The chantry, with a small organ, is over the vestry. John B. Smith is rector of the parish. The archbishop is the Most Rev. J. J. Williams.

The mansion of the archbishop, in the rear of the cathedral, is quite stately and very convenient. An old house on Washington Street, that barred the view of a part of the Cathedral, was removed in 1880.

THE CATHEDRAL OF THE HOLY CROSS, WASHINGTON STREET.

The Church of the Immaculate Conception, corner of Harrison Avenue and Concord Street, is a handsome granite edifice, 208 feet long by 88 feet wide, built in 1861 under the auspices of the Jesuit Fathers, at a cost of over \$100,000. The lot of about 90,000 feet of land on which it stands was bought for \$45,000. From the floor to the ceiling, the height is 70 feet. The main divisions of the interior are effected by two rows of Ionic columns, with richly ornamented capitals, which mark the line of the side aisles with graceful and light shades. On the keystone of the chancel arch, there is a bust of Christ; and on the opposite arch, over the choir gallery, a bust of the Virgin. On the other circles there are busts of the saints of the Society of Jesus. Over each column there is an angel supporting the entablature. The altar is a fine piece of workmanship in marble. On the panels is sculptured an abridgment of the life of the Virgin, — the Annunciation, the visitation to St. Elisabeth, the Nativity, the Adoration of the Magi, the Mater Dolorosa, and the Assumption. On either side of the altar are three Corinthian columns, with appropriate entablatures and broken arches, surmounted by statues of the Immaculate Conception of the Virgin, the whole terminated by a silver cross, with an adoring angel on each side. On the right side of the broken arch is a figure of St. Ignatius, with chasuble, stole, etc., and on the opposite side is that of St. Francis Xavier. Over the chancel is an elliptic dome, lighted by colored glass, with a dove in the centre with spread wings. Within the chancel rails are two side chapels, the one on the Gospel side dedicated to St. Joseph; that on the Epistle, to St. Aloysius. The ceiling over the chancel is elliptic, and laid off in bands ornamented with mouldings. The painting behind the high altar is the Crucifixion, by Garialdi of Rome. The organ is one of the best in America, and was built by Hook & Hastings in 1863. Adjoining the church grounds is the Boston College, a Catholic institution, of which Jeremiah O'Connor is president.

The Mission Church of Our Lady of Perpetual Help, Tremont Street, Boston Highlands, which was completed and dedicated in 1878, is one of the largest churches in Boston. It is under the charge of the Redemptorist Fathers; William Loewekamp being the rector. The church is a basilica, with transepts in the Romanesque style. The church has seats for 2,000 people, and affords standing-room for an equal number. It cost over \$200,000. The building is of Roxbury stone. Its length is 215 feet; width across the transepts 115 feet; width of nave and aisles 78 feet. The nave is 70 feet high in the clear, and the aisles are 34 feet high. Over the intersection of the nave and transepts rises an octagonal dome of 40 feet inner diameter, to a height of 110 feet. This dome is supported by four clusters of four columns each, all of polished granite, with finely-carved capitals. The sanctuary, which is very large, closes with a semi-

circular apse, in which is the high altar. Six side altars find room in the chapels at the ends of the aisles and transepts. The chapel of Our Lady is built out from the west transept. Over the vestibule is the organ gallery, which, like the triforium galleries, is not open to the public. The basement accommodates about 1,600 people. The sacristy is in a special building west of the sanctuary.

The Dudley-street Baptist Church, Boston Highlands, between Warren and Washington Streets, is a brick building in the Gothic style, covered by mastic. The church is 117 by 75 feet in dimensions, with a tower and steeple 200 feet high. The interior is divided into nave and side aisles by clustered columns, the auditorium and galleries containing about 200 pews, which seat 1,100 people. Henry M. King, D.D., is the pastor. There are over 600 members, and the society carries on many active charities. The first house of worship was of wood, and was dedicated in 1820. The present edifice was opened in 1853. Joseph Elliot was the first pastor. His successors in the pastoral office were William Leverett, Thomas F. Caldicott, D.D., and Thomas D. Anderson, D.D.

Dudley-street Baptist Church, Highlands.

The Catholic Apostolic Church is a small congregation worshipping in a hall at No. 227 Tremont Street. It represents a movement of which the distinctive feature is "the preparation of the church as a body for the coming and kingdom of the Lord." Its worship is celebrated Monday, Wednesday, and Saturday, at 6 A.M., Tuesday and Thursday at 5 P.M., and Friday at 10 A.M. On Sunday the celebration of the Holy Eucharist takes place at 10 A.M., and vespers at 5 P.M. The minister in charge is J. F. Wightman.

The West Church, Congregational, on Cambridge, corner of Lynde Street, is one of the old churches. It was built in 1806, taking the place of a wooden meeting-house built in 1736-37. This first building had a handsome steeple; and it was situated advantageously to give signals during the early days of the revolutionary struggle to the Continental troops at Cambridge, on the opposite shore. The British officers, suspecting it had been used for this purpose, ordered the steeple taken down in 1775. The first pastor was William Hooper, from Scotland, whose pastorate lasted ten years. The other pastors were Jonathan Mayhew, D.D., Simeon Howard, D.D., and Charles Lowell. C. A. Bartol, D.D., the present pastor, was ordained in 1837, and has occupied the pulpit ever since.

The Tremont-street Methodist-Episcopal Church, Tremont and Con-

Tremont-street Methodist-Episcopal Church, corner of Concord Street.

cord Streets, is a large, Gothic, natural-quarry stone building, with two spires, respectively 150 feet and 100 feet high. It is the finest Methodist church in the city. Hammatt Billings was the architect. The society was organized in 1848, under the name of the Hedding Church, and formerly occupied a brick edifice on South Williams (now Pelham) Street. The present building, completed in 1862, has a seating capacity of 800; and the

pastor is William E. Huntington. The illustration of the church is from "Harper's Weekly."

The Boston Evangelical Advent Church holds its services in the chapel, corner of Hudson and Kneeland Streets, which was built in 1854. The distinctive article in the Adventists' creed is that concerning Christ's return to the world, which they believe is near at hand, and which will be the beginning of the Millennium. L. W. Smith is the pastor.

The Somerset-street Baptist Church is a handsome building on Beacon Hill, and has the most prominent spire in the city, owing to its elevated site. The society of the First Baptist Church was formed in Charlestown in 1665, and after a great deal of persecution built a church in Salem Street in 1678. In 1771 a new church was erected on the same site; and in 1828 a brick house of worship, costing \$44,000, was erected at the corner of Hanover and Union Streets. The church on Somerset Street was built in 1858, and is of brick with a stucco front. The spire is 200 feet high. In 1877 the First Church united with the Shawmut-avenue Baptist Church, and the Somerset-street edifice was thereafter no longer used by the society. The last pastor was the late Rollin H. Neale, D.D. In 1878 the First Free-Will Baptist Church (Charles S. Perkins pastor), that had been worshipping in the Freeman-place Chapel, removed to the Somerset-street Church.

The Church of the Advent (Episcopal) was founded in 1844. Services were held first in a room at 13 Merrimac Street; later in a hall at the corner of Lowell and Causeway Streets; and afterwards in a building bought by the parish on Green Street, near Bowdoin Square. Next the Bowdoin-street Congregational Church, popularly known as Lyman Beecher's, was purchased, and is now occupied. The rectors, in chronological order, have been: William Crosswell, D.D., who died in church while concluding the services; the Right Rev. Horatio Southgate, D.D.; and James A. Bolles, D.D. The present rector, C. C. Grafton, appointed in 1872, is one of a society of mission priests of St. John Evangelist that has ministered to the parish since 1870. In some of its features the parish is peculiar in its organization and administration. The corporation consists of the rector and some twenty laymen, who fill their own vacancies. No sale or rental of pews is allowed, all sittings being free. The expenses are defrayed by the Sunday offertory. The mission priests are a body of men consecrated to a life-service, who have no stipulated salaries, and who live in community. There are daily services in the church as follows: Holy communion every morning at 7 o'clock, and on Thursdays also at 9.30; morning prayers said at 9, and even-song sung at 5. The Sunday services comprise: Holy communion at 7.30 and 11.45 A.M.; matins, 10.30; children's choral service, 3.30 P.M., and even-song 7.30 P.M. There are numerous special services in Lent. Connected with the church are several parochial and charitable works, including a boy's-choir school in Pinckney Street, and the Sisterhood of St. Margaret in Bowdoin Street, which has an orphanage in Lowell, and a young ladies' school in Chestnut Street. The parish, now comprising about 500 communicants, is erecting a new building.

The New Church of the Advent building is at the corner of Mount Vernon and Brimmer Streets. It is to be constructed of brick and stone, with an interior finish entirely of brick and freestone. The main body, 72 by 73

feet, will consist of nave, 76 feet high, two aisles and transepts. The chancel, with polygonal end, will be 30 by 48 feet. There will be a chapel, on the south side of the chancel, 18 by 33 feet; a crypt with groined ceiling, beneath the chancel, 24 by 30 feet; schoolrooms, hexagonal in shape, 43 feet in diameter; and various other rooms. The tower will be 22 feet square, and 190

The New Church of the Advent, Mount Vernon and Brimmer Streets.

feet high. The baptistery will be in the church, under the tower. Attached to the church on the north side will be the clergy-house, four stories high, containing vestry, clergy and choir rooms, refectory, and dormitories. When completed, the exterior will present a picturesque appearance. The architects are John H. Sturgis and Charles Brigham. After the completion of the new edifice, services will be held in both churches.

The Brattle-square Church (Congregational), corner Commonwealth Avenue and Clarendon Street, is a massive edifice of Roxbury stone, in the form of a Greek cross. The church was dedicated in 1873. S. K. Lothrop, D.D., was the pastor. The tall, square tower, with carved figures near the top, among which are four statues of angels blowing gilded trumpets, is noticeable. The acoustic properties proved to be bad; and, shortly after the opening, services were suspended. The church was sold at auction in 1881. The society dates back to 1699, when the first house was built in Brattle Square, to be replaced in 1773 by a larger edifice on the same ground. It was long known as the Manifesto Church, the original members having issued a document declaring their aims. The British soldiers used the church as a barrack during the war. A cannon-ball from a battery in Cambridge, which struck the building, was subsequently built into the wall. Edward Everett was one of the pastors of this church.

Brattle-square Church, Commonwealth Ave.

The Church of the Disciples was organized Feb. 28, 1841, to "embody the three principles; of a free church, a social church, and a church in which the members, as well as the pastor, should take part." It was called "The Church of the Disciples," because its members came together "as learners in the school of Jesus Christ, with Christ for their teacher." Its creed has been "faith in Jesus, as the Christ, the Son of God, and the purpose of co-operating together as his disciples in the study and practice of Christianity." The society was organized by 43 men and women; and it was determined at the outset that the seats in the place of worship should always be free, — none sold or rented, — and that the entire expenses should be met by voluntary subscriptions. Among the first names signed on the church-books were those of Nathaniel Peabody and his three daughters, — one of whom afterwards became Mrs. Horace Mann; another, Mrs. Nathaniel Hawthorne; and the third, Miss Elizabeth Peabody, is well known in Boston as foremost in good works and also in many educational movements. Gov. Andrew was also a member of the society. The total number of names now on the church-book is 726. The present house of worship is on War-

ren Avenue, an unpretentious, roomy edifice, erected in 1869 by voluntary subscriptions. It was free from debt when finished. The whole cost was less than the original estimate. The pastor is James Freeman Clarke, who has been pastor from the beginning. It is classed as Unitarian.

The Berkeley-street Church is at the junction of Warren Avenue with Tremont, Dover, and Berkeley Streets. It was organized September, 1827, and was originally located at the corner of Washington and Pine Streets, taking the name of the Pine-street Church. It belongs to the Trinitarian Congregational denomination. In April, 1862, it removed to the present site, and assumed the present name. In the list of its pastors are some of the most illustrious names in the Boston ministry; among them Thomas Skinner, D.D., Austin Phelps, D.D., and H. M. Dexter, D.D., editor of

"The Congregationalist."

On Sept. 30, 1877, the semi-centennial anniversary of the church was celebrated. In the summer of 1878 a debt which had oppressed the church from its origin was cancelled. The building is believed to be the largest Protestant house of worship in New England. William Burnet Wright has been the pastor for thirteen years.

Bowdoin-square Baptist Church, Bowdoin Square.

The Bowdoin-square Baptist Church was built in 1840, and is a solid-looking building with a front of unhammered granite. The tower is 28 feet square and 110 feet high, with four battlements. The structure, which cost \$70,000, measures 98 by 73½ feet. The church had at the outset 137 members, and the first pastor was R. W. Cushman, D.D. The

sittings in this house are free, and the expenses are met by voluntary weekly offerings. The present pastor is W. W. Downs.

The Second Church, Dorchester district, was organized Jan. 1, 1808, by 64 members who had been connected with the First Church in the same place, and was formed solely in consequence of an increasing population, its members separating from the old church with earnest mutual expressions of good-will. It has had but two pastors, — John Codman, D.D., and James H. Means, D.D.¹ Dr. Codman was a native of Boston, and a graduate of Harvard, and remained the pastor of the church until his death, Dec. 23, 1847, at the age of 66, in the fortieth year of his pastorate. He was devoted to his work, and, possessed of wealth, was widely known for his benevolence.

In the early part of his ministry there were serious difficulties, owing to a difference of doctrinal belief between him and some of his people; but, after these were adjusted, there followed many years of a peaceful and prospered service. Dr. Means was ordained July 13, 1848. During the 30 years of his ministry the church has been united and advancing. It has grown in size and in activity; and, as the population is filling in around it, it has the prospect of an enlarged field of usefulness. Dr. Means tendered his resignation in October, 1878, on account of impaired health. The church

Second Church, Washington Street, corner Centre.

still occupies the edifice first built, — a plain but spacious and tasteful building of wood, which was dedicated Oct. 30, 1806. It has never been burdened by a mortgage, and there is no wish to exchange it for a costlier structure. The whole number of members from the beginning has been about 1,200, nearly 800 of whom were received upon profession of faith.

The Church of the Unity grew out of the increasing needs of the people of the South End in the rapid growth of that part of the city. It was organized June 27, 1857, by an association of men well known, with a broad basis of religious doctrine, and a declared purpose of "promoting good morals, and the cause of Liberal Christianity." Its first pastor was George H. Hepworth, now of New York, who remained about 11 years. He was succeeded by M. K. Schermerhorn, who resigned after about 3 years' ser-

¹ E. N. Packard, D.D., was installed pastor in April, 1879.

vice. He, in turn, was succeeded by M. J. Savage, the present pastor, who was installed September, 1874. The society first worshipped in a hall on the corner of Shawmut Avenue and Canton Street, but soon built the present church edifice, simple and tasteful in its architecture, well located on West Newton Street, and paid for. It has a seating capacity of over

Church of the Unity, West Newton Street.

1,000. The society has always been prosperous, independent, and progressive in its spirit; and it reports itself now as in a state of prosperity, financially and religiously, never before surpassed. Mr. Savage, the present pastor, is a man of large culture and liberality, independent and outspoken in his views, of wide influence and popularity as a preacher. He has also become widely known as the author of several excellent books entitled "Christianity the Science of Manhood," "Light on

the Cloud," "The Religion of Evolution," and "Bluffton," a novel of the religious type. The church is classed as Unitarian.

The Harvard-street Baptist Church, on Harrison Avenue, corner of Harvard Street, was organized in 1839. It was formed in Boylston Hall, and was for some time called the Boylston-street Church; later it worshipped in the Melodeon Hall, now the Gaiety Theatre; and finally, in 1842, the present edifice was erected. The successive pastors have been Robert Turnbull, D.D.; Joseph Banvard, D.D.; A. H. Burlingham, D.D.; D. C. Eddy, D.D.; Warren Randolph, D.D.; L. L. Wood, and T. J. B. House. The present pastor is O. T. Walker. Although having suffered by removals, between 1,700 and 1,800 persons have united with this church. The membership is nearly 300; the society is in a prosperous condition, and promises to continue in carrying on a good work in its vicinity. The building has a stone "swell" front, — almost alone in its style of architecture, — and contains seats for about 1,000 persons.

The Columbus-avenue Universalist Church was organized in 1817. Its first church was on School Street, on the site of the present School-street Block. Its present church edifice, erected in 1872, is of Roxbury stone, and is admirably adapted to its uses, being exceedingly cheerful and pleasant, with painted windows, including the "Man of Sorrows," the "Risen Lord," and the twelve apostles; symbols of Faith, Hope, Charity, and Purity; and memorials of the first pastor, Hosea Ballou, its Sunday-school super-

intendent for thirty years, Thomas A. Goddard, and its eight deceased deacons. Its cost was \$160,000. The parish, whose legal title is "The Second Society of Universalists in the Town of Boston," enjoyed the labors of its first pastor from 1817 to the time of his death, in 1852, at the age of 82 years. He was a man of great insight, marked originality, and singular

simplicity and clearness in all his reasonings and teachings. E. H. Chapin, D.D., was his colleague from May 1, 1846, to May 1, 1848, when he removed to the city of New York. The present pastor, A. A. Miner, D.D., became colleague May 1, 1848, and sole pastor in 1852. He was president of Tufts College from 1862 to 1875, preaching regularly during that period to his parish each morning service, and to the college audience in the afternoon. Dr. Miner is now one of the senior pastors of the city. He has been twelve years a member of the State Board of Education, and throughout the 32 years of his ministry an earnest pleader for the

cause of liberty and prohibition. His parish, sharing thus largely in educational and reform work, has enjoyed great prosperity, and held throughout its history a conspicuous place in the body of Universalist churches.

Second Universalist Church, Columbus Avenue.

The First Congregational Society of Jamaica Plain (Unitarian), previous to 1770, constituted a part of the Second or Upper Parish of Roxbury. Mrs. Susanna Pemberton, daughter of Peter Faneuil, with many other members, desired to have a church nearer their homes. Through her influence, and the liberality of her husband (Benjamin Pemberton), a new society was formed, and a church built at Jamaica Plain. It was called the Third Parish in Roxbury, and was incorporated under that name. The house was completed in 1770; and in 1783 Gov. John Hancock gave the society a church-bell that had been removed from the "New Brick" Church in Boston. In 1854 a beautiful stone edifice was erected on the site of the wooden building, and in 1871 it was remodelled. In 1863 the corporate name was changed to "The First Congregational Society of Jamaica Plain." The pastors have been: in 1772, William Gordon, an Englishman, and author of the "History of the American Revolution;" in 1793, Thomas Gray; in

1836, George Whitney, as associate; in 1843, Joseph H. Allen; in 1845, Grindall Reynold; in 1859, James W. Thompson, who is still in charge, with Charles F. Dole, appointed in 1876, as associate.

Mount-Vernon Church Ashburton Place.

The Mount-Vernon Church, on Ashburton Place, formerly Somerset Court, was completed and dedicated in 1844, six months after the corner-stone was laid. The society was organized in 1842, chiefly to secure the services of Edward N. Kirk, D.D., as pastor, whose death, in 1874, closed a life-long service of 32 years, during which time he gathered about him a large and devoted congregation. Samuel E. Herrick, D.D., was installed in 1871 as pastor. At the organization of the church it had 47 members. Since that time 1,596 have been added. The pres-

ent membership is 542. Dwight L. Moody, the evangelist, first professed religion in this church.

The South Congregational Church, on Union-park Street, was first proposed in 1825, to accommodate Congregationalists who resided in the vicinity of Boylston Market. The chairman of the first meeting was Alden Bradford, ex-secretary of the Commonwealth. In 1828 was laid the corner-stone of a

church, which was finished in the following January. The first minister was Mellish Irving Motte, who had previously been an Episcopal clergyman in Charleston, S.C. His ministry lasted for 15 years. His successor was Frederic Dan Huntington, who, after 13 years' successful service, left the society to become the Plummer Professor at Harvard College. He was succeeded by the present minister, Edward Everett Hale, a graduate of Harvard College, who is one of the most untiring workers among the clergymen of Boston, and whose literary work has made his name familiar all over the country. In 1860 a larger church proved necessary; and on the 8th of June, in the midst of war and rumors of war, the corner-stone was laid. With remarkable promptness this beautiful church was finished in seven months, and dedicated Jan. 8, 1862. For the first time a responsive service was used in the church; and, after reading selections from the Bible, the congregation, who had built the church, with united voices dedicated it

"To the glory of God our Father,
To the gospel and memory of His Son, and
To the communion and fellowship of His Spirit."

The Walnut-avenue Congregational Church, Roxbury district, was primarily an offshoot from the Eliot Congregational Church. Public services were first held Oct. 2, 1870, and a Sunday school of 17 classes was formed. Dec. 19, following, the church was duly recognized by a council of churches in the vicinity, under its present name, and with a membership of 84, which has since increased to 266. Albert H. Plumb was installed pastor Jan. 4, 1872. The present edifice, called a chapel, though it is large, and has a seating capacity for about 600, is situated on the corner of Walnut Avenue and Dale Street. It was built of Roxbury stone, with Nova Scotia stone trimmings, and is of the Gothic style of architecture. Farewell services were held in Highland Hall, where the society first worshipped, May 25, 1873; and the new chapel was dedicated the following day.

The Winthrop Congregational Church is on Green Street, Charlestown district. It was incorporated March 1, 1833, and called the "Winthrop Church" in remembrance of the pious Gov. John Winthrop, who founded a church in Charlestown in 1630. The first house of worship was on Union Street. The corner-stone of the present edifice was laid May 31, 1848. The building is Gothic, of brown-colored brick; and the spacious auditorium is old style with modern pulpit. The pastors have been Daniel Crosby, 1833-1842; John Humphrey, 1842-1847; Benjamin Tappan, jun., 1848-1857; Abbott E. Kittredge (now of Chicago), 1859-1863; and J. E. Rankin (now of Washington, D.C.), 1864-1870. The present pastor is A. S. Twombly, 1872. The church has 500 members, and a large Sunday school. It has always been distinguished as a conservative, generous society, maintaining the dignity of the Congregational polity. It has been a "mother of churches,"

sending its members to nearly all the churches of its denomination in Boston and vicinity from time to time. Carleton College, Minnesota, and Doane College, Nebraska, were endowed largely by two of its members, and named from them.

The Shawmut Congregational Church, organized in 1849, grew from the "Suffolk-street Union Church," a modest organization of 50 members, formed on Nov. 20, 1845. It worshipped in a little chapel on Shawmut Avenue, built by the City Missionary Society, with George A. Oviatt, the latter society's general agent, as pastor. The first pastor of the organized Shawmut

Congregational Church was William Cowper Foster, who was installed Oct. 24, 1849. He was succeeded by Charles Smith, then of Andover, who was installed Dec. 8, 1853, and occupied the position until the autumn of 1858. The church was then without a pastor until June 14, 1860, when Edwin B. Webb, D.D., the present pastor, was called. He was installed Oct. 5, that year. The chapel of the Missionary Society was used by the church until 1852, when a new meeting-house was built, and dedicated Nov. 18, that year. Soon after Dr. Webb's settlement, this house was found to be inadequate; and in January, 1863, it was voted to erect a new one. Accordingly land was purchased on the corner of Tremont and Brookline Streets; and the present building was erected, and was dedicated on Feb. 11, 1864. The society maintains a mission-chapel, which

Shawmut Congregational Church, Tremont Street.

was dedicated Nov. 1, 1865. The twenty-fifth anniversary of the church, placing the date of its organization at the time of the establishment of the "Suffolk-street Union Church," was celebrated on the 20th of November, 1870; and George A. Oviatt, the first pastor, preached the historical sermon.

The Union Church was organized on June 10, 1822, with twelve members; on the 18th another member was admitted; and in August following twelve more, they having been dismissed from their respective churches to strengthen this young organization,—eight from the Park-street Church,

three from the Old South, and one from the church in Braintree; and in commemoration of this event the organization took its name. The first pastor of the church was Samuel Green, who was installed March 26, 1823. He resigned in 1833 on account of failing health; and his pastorate ceased on the 26th of March, 1834, the eleventh anniversary of his installation. A few months later he died. During his ministry 600 members were added to the church. Nehemiah Adams of Cambridge succeeded Mr. Green, and continued as senior pastor until his death, Oct. 6, 1878. He was installed March 26, 1834; and in 1859 the twenty-fifth anniversary of his installation was duly celebrated. On Sunday, Feb. 14, 1869, Dr. Adams was taken dangerously ill in his pulpit, and from that time till May, 1871, was unable to preach; Henry M. Parsons in the mean while, Dec. 1, 1870, having been installed as his associate. During Mr. Adams's active ministry, 993 persons were admitted to the church. Mr. Parsons, as associate pastor, was dismissed Dec. 30, 1874; and on the 1st of February, 1876, Frank A. Warfield, then of Greenfield, succeeded him. At present Mr. Warfield is the only pastor. The church from which the Union Church was formed first gathered in Boylston Hall. Soon after, several individuals erected a meeting-house in Essex Street; but, after the church had occupied it about two years, difficulties arose between the pastor and some of his church, and the pastor and the church as a body removed to Boylston Hall again. Subsequently a minority, who declined to follow the pastor, were organized into a separate church, June 10, 1822; and Aug. 26 they took the name of Union Church, and obtained formal title to the Essex-street meeting-house, the same day. In 1840 this was remodelled, at an expense of \$20,000; and on May 22, 1869, after being occupied as a place of worship for almost half a century, the last public services were held within its walls, and it was soon after occupied for purposes of trade. The present beautiful and costly edifice, on Columbus Avenue, corner of Newton Street, to which the church removed, was dedicated Nov. 17, 1870. The building of this church embarrassed the society by a heavy debt; but this was wholly removed a few years later.

The Church of the Messiah (Episcopal), on Florence Street, was organized in 1843. Its first rector was George M. Randall, D.D., afterwards Bishop of Colorado, who continued as rector until his elevation to the episcopate in 1866. Pelham Williams, D.D., was his successor, and served until 1876, when he resigned, and Henry Freeman Allen (the present rector) succeeded him. Mr. Allen is of a Boston family, and was graduated at Harvard in 1860. In 1869 the seats in the church were made free to all, and have so remained ever since. At the same time there were introduced in the parish various important changes in its practice, including the use of daily morning and evening prayer throughout the year, the celebration of

the holy communion on all Sundays and festival-days, and the rendering of the musical part of the service by a surpliced male choir. The order and character of the services are still the same.

The **Twenty-eighth Congregational Society** was founded by Theodore Parker. It was organized in November, 1845, by "friends of free thought," after Mr. Parker had been preaching for some months in Boston. Services were held in the Melodeon until the autumn of 1852, and afterwards in the Music Hall. Mr. Parker preached regularly until his illness in 1859, and continued as minister until his death, May 10, 1860. For a while after this, Samuel R. Calthrop, now of Syracuse, N.Y., occupied the pulpit; from May, 1865, to July, 1866, David A. Wasson was the minister; during 1867 and 1868, Rev. Samuel Longfellow; from December, 1868, to November, 1871, James Vila Blake; and for several years after, J. L. Dudley. The society has also had occasional pulpit services of such men as Ralph Waldo Emerson, William Lloyd Garrison, Wendell Phillips, John Weiss, Moncure D. Conway, Francis E. Abbot, O. B. Frothingham; and such women as Ednah D. Cheney and Celia Burleigh. In 1866 the society removed to the Parker Fraternity Rooms, then at No. 554 Washington Street; and in 1873 to the building on Berkeley, corner of Appleton Street, then newly erected by the fraternity as a memorial to Theodore Parker, and known as the Parker Memorial Hall. The society, at present, has no pastor.

The **New Jerusalem Church Society** (Swedenborgian) was formed in 1818, of twelve members; and at the present date (1878) the total membership is over 600. The late Thomas Worcester, D.D., the first pastor, was one of its original founders. During his collegiate course at Harvard he became deeply interested in the writings of Swedenborg, and entered the service of the newly-formed society immediately after he was graduated. He continued as leader and pastor for forty-nine years. James Reed, the present pastor, was ordained as Dr. Worcester's assistant in 1860, and succeeded him in 1867. The house of worship on Bowdoin Street was built and dedicated in 1845, and has been occupied ever since. Its seating capacity is about 800. For a long time there was no other society of the New Jerusalem or Swedenborgian Church in Boston or vicinity. Within a few years, however, churches have been established in the Roxbury district, Brookline, Newton, and Waltham, largely composed of members of the original society. In consequence of the small number of neighboring societies, nearly every district and suburb of Boston is represented in the congregations of the Bowdoin-street church. There is probably no other church in the city whose regular attendants come, on the average, from so great a distance.

The **Congregational House** is on the corner of Beacon and Somerset Streets. It was put into its present form, and consecrated to its present

use, in 1873. It has a frontage on Beacon Street of 103 feet, and on Somerset Street of 93 feet. It is built of faced granite, front and rear, and is owned and controlled by the American Congregational Association, which was incorporated in 1854. It was intended to accommodate, first and chiefly, all the benevolent societies having offices in Boston to which the Congregational churches make their regular contributions. It has, therefore, the executive officers and workers of the American Board of Commissioners for Foreign Missions, the Woman's Board, the Congregational Publishing Society, the Massachusetts Home Missionary Society, the American Missionary Association, the American College and Education Society, the American Peace Society, the Congregational Library, and the Boston City Missionary Society. The editorial and business rooms of "The Congregationalist," and of "The Literary World," Prof. Robert R. Raymond's School of Oratory and Elocution, and Thomas Todd's printing-rooms, are in this building; and three of its stores are occupied by the Roxbury Carpet Company. It has a large hall on the third floor, in which the Congregational ministers of Boston and vicinity hold weekly and occasional meetings, and the

Congregational House, Beacon Street.

Wesleyan Association Building, Bromfield Street.

ters of Boston and vicinity hold weekly and occasional meetings, and the

Congregational Club has its monthly social gatherings. The religious issues of these various organizations, in the form of weekly, monthly, quarterly, and annual publications, are numbered by millions, and sent to every part of the English-reading world.

The **Wesleyan Association** building, 34 to 38 Bromfield Street, east of the Methodist church, was erected in 1870 by the Wesleyan Association, a corporation organized for the purpose of publishing a Methodist family paper. In the rear wing of the second story there is a fine hall, with seats for 300 persons, that is used chiefly for meetings, lectures, and concerts. Among the occupants of the building, are the Methodist Theological Seminary; the Law School of the Boston University; Hall & Whiting, publishers and booksellers; James P. Magee, agent Methodist Book Concern; "Zion's Herald;" the Caligraph Writing Machine and Copying office; and M. C. Beale, manager, and R. H. Parker, treasurer, of the New-England branch of the American Writing Machine Co.

The **Boston Young Men's Christian Union** was organized in 1851, and

incorporated in 1852. Its new and beautiful building, 18 Boylston Street, was dedicated in 1876. The aim of the Union is to provide for young men a homelike resort, with opportunities for good reading, pleasant social intercourse, entertainment, and healthful exercise. The Union is aided by many practical philanthropists. The Christmas and New-Year's Festival for needy children, the work of the Ladies' Aid Committee, the "Country Week" (a vacation for needy and worthy children), are some of its special charities. Religious services are held Sunday evenings, in the Union Hall; classes are formed for the study of languages and the English branches; lectures, readings, and "practical talks" are given; dramatic and musical entertainments are offered; members' socials and out-door excursions are provided. The gymnasium is one of the largest and best-

Young Men's Christian Union, Boylston St.

equipped in this country. There is an Employment Bureau for young men, Bureau of Reference for ladies, Boarding-house Committee, Church Committee, Reception Committee, and a Visiting Committee to care for the sick. The Union is non-sectarian, and the membership fee is one dollar a year. William H. Baldwin is the

president of the Union, Henry P. Kidder chairman of the board of trustees, and Otis Norcross treasurer.

The Boston Young Men's Christian Association was organized Dec. 22, 1851, and is the oldest "Y. M. C. A." in the United States. With the exception of the Montreal association, which was formed only one week earlier, it is the oldest in North America.

The first rooms occupied by the Boston association were at the corner of Washington and Summer Streets. Its first president was Francis O. Watts. From 1853 to 1872 the Association occupied rooms in Tremont Temple. The present building, which is owned by the Association, is at the corner of Tremont and Eliot Streets. During the war 500 of its members enlisted in the Union armies, and went into the field; and the Army Relief Committee raised \$333,237.49, which was expended by the Christian Commission.

The Association also rendered efficient service in sending aid to Chicago after its great fire; over \$34,000 in cash being raised, besides goods to the value of \$219,000. In 1878 the Association attained its highest record in money raised for current expenses. Its present membership is 3,300. Its library has 5,000 volumes, and its reading-room is well supplied with papers and magazines. The parlor is large and handsomely furnished. The gymnasium is spacious and well patronized. The sociables, receptions, lectures, and classes are very popular among the young men of the city. A. S. Woodworth is president, and M. R. Deming general secretary.

Young Men's Christian Association Building, Eliot Street.

The Churches in Boston are numerous and varied, representing most of the denominations to be found in this country. The total number of duly organized congregations is 222. The number in each denomination is shown in the following table:—

DENOMINATION.	NUMBER.	FIRST CON- GREGATION ORGANIZED.	DENOMINATION.	NUMBER.	FIRST CON- GREGATION ORGANIZED.
Baptist	29	1743	Methodist	3	1839
Catholic Apostolic	1	1804	Methodist Episcopal . . .	28	1771
Christian	1	1804	New Jerusalem	2	1818

The Heart of the City.

BENEVOLENT AND CHARITABLE ORGANIZATIONS, HOMES, AND ASYLUMS.

THE many public and private organized charities of Boston are quite bewildering in their variety; and their work is done, as a rule, systematically and well. Many thousand dollars are expended annually; and every class of the poor and unfortunate is in one way or another reached, more or less satisfactorily, by the several organizations; and it would seem that, in a city so well supplied with such institutions, and with such a noble band of professional and volunteer workers, there should be little suffering and want within its limits. But, alas, and alas! "The poor ye have always with you." And Boston, in spite of the organized efforts of thoughtful and good people, and the annual expenditure of large sums of money, has its full share of unrelieved suffering and want.

The Central Charity Bureau and Temporary Home, established by the city, aided by \$20,000 subscribed by citizens, occupies three substantial buildings of brick with granite trimmings, on Chardon Street; and here are administered its official outdoor charities. The Charity Building is occupied by the overseers of

Charity Building and Temporary Home, Chardon Street.

the poor, the city physician, and the paymaster of the soldiers' relief; and by the following private charitable societies: the Boston Provident Asso

ciation, the Industrial Aid Society, the Boston Sewing Circle, the Ladies' Relief Agency, the Young Men's Benevolent Society, the German Emigrant Aid Society, the Boston Police Relief Association, the Ladies' Co-operative Visiting Society, the Associated Charities, the Homœopathic Dispensary, and other organizations. Since the establishment of this bureau, the charities of the city have been dispensed more systematically than ever before, and imposture in their bestowal has been to a large extent prevented. The Temporary Home is designed to provide for foundlings, and persons in a destitute condition. Only women and children are allowed to lodge there, but meals are given out to both sexes under the order of the overseers of the poor or the superintendent. The able-bodied persons who apply for food are required to work before obtaining it: the men saw and pile wood, and the women do the housework. The architects of the buildings were Sturgis & Brigham.

The Directors for Public Institutions, whose office is at 30 Pemberton Square, have charge of the city poor and reformatory institutions, a list of which is given in the chapter on "The Public Buildings." The places under their charge where the official indoor charities are administered include, —

The Almshouse for Girls, situated on Deer Island, where in 1880 there was an average of 70 inmates, besides an average of 65 inmates in the nursery connected with the house; the almshouse for male paupers, on Rainsford Island, where 245 persons were kept in 1880, — a larger number than in any previous year; the almshouse situated in the Charlestown district, on the north side of the Mystic River, near Malden Bridge, where in 1880 an average of 40 inmates was accommodated, 39 persons provided with lodgings, and 475 furnished with meals, — the whole cost of the meals being \$50; the Home for the Poor, on the Austin farm in the West-Roxbury district, which in 1880 had an average of 159 inmates; and the Marcella-street Home for pauper and neglected boys, with an average of 218 inmates.

Of the character and extent of the private charities and benevolent work of the city, the following concise sketches of a few of the prominent organizations will give a fair idea; and they contain much interesting information.

The Associated Charities was organized, in 1879, to secure the concurrent and harmonious action of the different charities of the city for these purposes: "to raise the needy above the need of relief, prevent begging and imposition, and diminish pauperism; to encourage thrift, self-dependence, and industry through friendly intercourse, advice, and sympathy; and to aid the poor to help themselves, rather than to help them by alms." At the central office, located in the Charity Building on Chardon Street, a registry of applicants for charitable aid is kept, with a record of what is given to, and what is known of, them. This information is disclosed only

for the benefit of the persons registered, or to detect imposition. Individuals or societies, stating that they have been applied to for relief by any person, receive prompt reports, from the central office, of aid given to the same person, with other information, so that they can wisely decide what relief, if any, to continue. The city is divided into districts; and conferences are established in each district, composed of representatives and visitors of all charitable organizations and churches working in the district, and a few other persons, who are elected. Each conference sees that every application for aid in its district is thoroughly investigated; studies how applicants for relief can be made self-supporting, and helps them in that direction; obtains aid from the appropriate sources for those unable to earn support; organizes for these purposes a corps of volunteer visitors; and holds weekly meetings for the discussion and disposition of cases. A council has general supervision of the registration of the district conference, of the duties of volunteer visitors, of the funds, and of measures for the attainment of the objects of the society. The president is Robert T. Paine, jun.; secretary, G. A. Goddard.

The Boston Provident Association was organized in 1851, and incorporated three years later, to aid in suppressing street-beggary, and in "elevating and improving the condition of the poor." Relief is distributed systematically in all sections of the city, through special officers serving gratuitously; and to many employment is furnished. About 2,500 families are relieved by this society yearly. The expenses of the society average \$15,000 a year. It is supported by yearly subscriptions, donations, and income from legacies. The head office is in the Charity Building, Chardon Street.

The Roxbury Charitable Society was formed as long ago as 1794, for "the relief of the poor and the prevention of pauperism." Clothing, fuel, provisions, and money to a limited extent, are distributed, through an agent, exclusively to citizens of the Roxbury district. The society has a large fund, from legacies, donations, and subscriptions; and its disbursements are generous and extensive. The agent has headquarters at 118 Roxbury St.

The Home for Aged Poor, Roxbury district, was established in 1870, and incorporated two years later, by the "Little Sisters of the Poor," a Catholic sisterhood instituted some years ago in France by a poor priest and two working-girls of St. Servan. Their special purpose is to support old people in various countries. The sisterhood now includes 2,000 sisters, and supports 20,000 old people. Applicants are received without regard to their religious professions or nationality: they must simply be of good moral character, destitute, and 60 years old. The charity is maintained by daily collections of the sisters, and by donations. Among those who have aided it by gifts is Mrs. Andrew Carney, the widow of the founder of the

Carney Hospital. The Home is pleasantly situated on Dudley Street, corner of Woodward Avenue. One building accommodates 41 aged women, and another 40 aged men. Eleven sisters manage the institution, and the sisters do the domestic work. None receive salaries or wages. When the new building was completed in 1880, there were accommodations for 200 old people.

The Winchester Home for Aged Women, in the Charlestown district, was founded from a bequest, valued at \$10,000, left by Mrs. Nancy Winchester of that district for this purpose, and was opened in 1866 with six

Winchester Home for Aged Women, Eden Street, Charlestown District.

inmates: the present number is 29. The building now occupied, No. 10 Eden Street, was erected in 1872-3. The beneficiaries must be of American birth, 60 years of age, and must have been residents of the Charlestown district for ten years preceding application. They are charged \$100 for admission fee, and about \$50 for furniture. The expenses are met by the income of the Winchester property, entertainments, donations, and subscriptions. Liverus Hull is president, Abram E. Cutter secretary, and Mrs. Louisa A. Ramsey matron.

The Home for Aged Colored Women, situated at 27 Myrtle Street, was founded in 1860, and incorporated four years later. Among those interested in its establishment were the late Gov. John A. Andrew and James Freeman Clarke. It cares for from 18 to 20 inmates, and renders outside assist-

ance to others. It is supported by subscriptions and donations, its expenses being from \$3,000 to \$4,000 a year. Its general work is carried on by the directors, most of whom are ladies.

The Home for Aged Women, at 108 Revere Street, was organized in 1849, and has furnished a home to over 300 aged persons, of whom 165 have died while

in its care. The present number of inmates is about 90. About half of that number, being aged and infirm persons who have been useful as nurses to the sick, are also aided at their own homes in quarterly instalments, from a special fund be-

Home for Aged Women, Revere Street.

queathed for this purpose. Henry B. Rogers is president, Henry Emmons secretary, and Miss L. D. Paddock matron.

Disabled Soldiers and Sailors and their families, and the families of those who lost their lives in the late war, and who have died since the war of injuries received or disease contracted during service, receive aid from the city at the Central Charity Bureau on Chardon Street. During the year 1880 the amount paid was \$99,020. At the beginning of 1878 there were about 1,400 beneficiaries. The State repays the city for amounts paid out in this aid.

The Industrial Temporary Home, No. 17 Davis Street, was chartered in 1877, to furnish temporary lodging and food for destitute persons of both sexes, who are willing to work. Those parties who contribute certain sums to this institution are given tickets entitling the bearer to meals or lodging, on condition of working a specified time in payment of the same. Help for laundry-work, sewing, wood-sawing, and manual labor of all kinds, is furnished by the institution, which is supported by the income derived in that way, and by contributions. Rev. A. J. Gordon is president, Mrs. D. C. Maxwell matron, and Stephen T. Andrews superintendent.

The Home for Aged Men, on Springfield Street, which was organized in 1861, is an institution the purpose of which is to provide a home for, and otherwise assist, respectable aged and indigent men. Since its establish-

ment, there have been 100 inmates, and 85 old men have received aid at their own homes. The home was first opened in 1861, at No. 17 South Street, and was removed in 1869 to the present building, which was purchased of the city. The building was erected in 1855 for a lying-in hospital,

Home for Aged Men, Springfield Street.

and was occupied for that purpose almost two years.

It was subsequently bought by the Female Medical College, but soon reverted to the city, and during the war, and for several years after, was used as a home for discharged soldiers. Only natives of the United States are admitted as beneficiaries. The

Home is supported by volun-

tary contributions. Otis Norcross is president, David H. Coolidge clerk, and Sarah W. Lincoln superintendent.

The **Children's Home**, and **Home for Aged Females**, originated in 1856, and opened in 1859, is designed to provide for orphan or half-orphan children, and old women of small means having no near kindred. It charges a low rate of board, — for children \$2.00, and women \$4.00 per week. It is pleasantly situated on Copeland Street, in the Roxbury district; and the number of inmates averages 20. The yearly expenses are \$4,500, and it is supported by subscriptions and generous donations. The management is not sectarian.

The **Temporary Home for the Destitute** cares for young children, and finds homes for them where they will be well treated, and brought up in a manner that will make them useful members of society. It also relieves destitute children, infants, and women out of employment. The work began 32 years ago, through the efforts of John Augustus and Eliza Garnaut, the former a poor shoemaker, and the latter an estimable widow. It was incorporated in 1852. During the year 1877 the Home received 268

children, including 34 infants, returned 140 of them to their parents, placed 79 for adoption, and provided homes for 60 in families. The president is John Ayres, and the matron Mrs. A. L. Gwynne, who has served since 1848. The Home is at No. 1 Pine Place.

The Children's Mission to the Children of the Destitute occupies a brick building at No. 277 Tremont Street, near Hollis Street. It was instituted in 1849, incorporated in 1864, and is fostered by the Unitarians, though it is not sectarian in its functions or purposes. Its objects are thus stated: "First, A mission to the poor, ignorant, neglected, orphan, and destitute children of this city; to gather them into day and Sunday schools, to provide homes and employment for them, and to adopt and pursue such measures as will be most likely to save

Children's Mission, Tremont Street.

or rescue them from vice, ignorance, and degradation; and to place them where they will receive such an education and be taught such occupations as will best fit them to support themselves, and enable them to become good and useful members of society. Second, To excite in the minds of the children of the more favored portion of our community a spirit of Christian sympathy and active benevolence, and, by interesting them in a work which appeals so strongly to their hearts, to stimulate them to acts of self-denial and earnest helpfulness, and thus prevent the growth of those seeds of selfishness which are so often early planted in the young mind." The Mission has found homes in New England and the West for over 6,000 children, and has afforded temporary aid to many more. Henry P. Kidder is president, and William Crosby superintendent.

The Massachusetts Infant Asylum was incorporated in 1867, to assist and provide for deserted and destitute infants. Babies of nine months and under are received, and when reaching the age of two years are discharged, excepting in cases of delicate health when discharge might endanger their lives. The State pays the Asylum for the board of State pauper infants. It occupies a building of its own in the Jamaica-Plain district, near the Boyl-

ston station of the Providence Railroad. The average number of infants provided for annually is about 225. Usually about 25 children are cared for in the asylum, and between 50 and 60 are boarded out, according to a plan adopted three years ago to relieve the house from the pressure of increasing admissions. The yearly expenses are between \$13,000 and \$14,000.

The Infant School and Children's Home, incorporated in 1869, to take and care for children until their parents could provide for them, and to find permanent homes for children without friends or worthy parents, is an outgrowth from an institution started in 1833 to care for poor children during the absence of their parents at daily work. The present Home is at No. 36 Austin Street, Charlestown district. About 30 children are cared for each year; and the annual expense of the Home is about \$1,500, met by private subscriptions and donations.

The Church Home for Orphans and Destitute Children has grown, from an organization in 1854 to systematically provide clothing for poor children to enable them to attend Sunday school, to a thoroughly equipped home that is now providing for 100 children. The Home is situated at the corner of Broadway, N, and Fourth Streets, and is supported and controlled by the Protestant Episcopal churches of the diocese of Massachusetts, though children of all denominations are received. The expenses average \$10,000 a year, and are met by subscriptions and donations.

St. Vincent's Orphan Asylum, for destitute girls, was established in 1831, and incorporated in 1845. It is located on Shawmut Avenue, corner of Camden Street. Children are admitted without regard to creed or color, and from time to time are given for adoption or placed out at service. Thirteen Catholic sisters have charge of the institution, and serve without pay; doing too, with the children, the domestic work. The yearly expense, about \$12,000, is met by annual collections taken in all the Catholic churches in the city and vicinity, donations, and fairs; and each church supports a certain number of children. The expenses of some children are paid by relatives or friends. The Asylum cares for 225 children annually.

The Association for the Protection of Destitute Catholic Children was organized and incorporated in 1864, and a home established for destitute orphan or neglected children. The present building, which cost with the land nearly \$150,000, is situated on Harrison Avenue, opposite the Church of the Immaculate Conception. Between 300 and 400 children are annually received into the institution, and are cared for and instructed by the Sisters of Charity. On leaving, the children are returned to their friends, places are found for them, or they are provided with homes elsewhere. The corporation is wholly Catholic, though it is understood that children of all denominations will be received. The yearly expenses, between \$12,000 and \$14,000, are met by income from invested funds, donations, collections in churches, etc.

St. Joseph's Home for Females is a home for domestics sick and out of work, and is managed by the sisters of the Third Order of St. Francis. It is a Catholic institution, at Nos. 41, 43, and 45 Brookline Street. It is wholly a charitable institution, and with few exceptions no charges are made to the inmates. Mother Mary Corbett is the Superior.

The Baldwin-place Home for Little Wanderers is a worthy charitable institution at the North End. Its object is to rescue children from want and shame, provide them with food and clothing, give them instruction, and place them in proper homes. It is not sectarian, six denominations being represented in the board of directors. It was incorporated in 1865, and the Home was dedicated the same year. The number of children received in 13 years has been 4,509. J. Warren Merrill is president, Pliny Nickerson secretary, Wm. G. Brooks, jun., treasurer, and R. G. Toles superintendent.

Home for Little Wanderers, Baldwin Place.

The Society of St. Vincent de Paul, organized in 1861, was incorporated in 1869, for the purpose of "training its members to a life of Christian charity." The poor are visited at their homes, and relieved; a number of young children are supported by the society at the St. Ann's Infant Asylum. Under its supervision are 14 subordinate organizations, or conferences, one of which is in Chelsea, and one in Cambridgeport. The members must be Catholics; and the funds are derived from their voluntary subscriptions, donations, lectures, collections in churches, etc. Its income is large, and its expenditures generous. It aids yearly over 3,000 families, and its agents average 20,000 visits. The society is a branch of the society of the same name in Paris, which originated in 1833.

The Penitent Females' Refuge and Bethesda Society is formed by the practical union of two organizations,—the "Associated Brethren," an organization of twelve gentlemen who established the Females' Refuge in 1818; and the Bethesda Society, an organization of ladies, incorporated in 1854. The society maintains a home for the reformation of abandoned

women. It accommodates 23 inmates, of ages ranging from 14 to 31; and admission is conditional upon an expression of a sincere desire to reform, and promise of submission to the regulations. The home is at No. 32 Rutland Street, in a building that cost \$12,000, the gift of benevolent citizens, on land given by the city. The institution is supported by income from a permanent fund of \$10,000, and generous gifts and subscriptions.

The House of the Angel Guardian, a Catholic institution, was established in 1851, and incorporated in 1853. Its chief object is to care for wayward boys, orphans, and destitute children. Its graded school system draws

House of the Angel Guardian, Vernon Street.

many boarders who avail themselves of the instruction given in the English, commercial, and mathematical departments. It is endowed, and owns property valued at more than \$87,000, and receives donations. Its annual expenses are about \$20,000, and the number of inmates average about 200. The house was established and planned by the Rev. George F. Haskins, a graduate of Harvard College, who devoted to it his services as rector and treasurer till his death, in 1872. He contributed \$20,000. It is now conducted by the Brothers of Charity, of which W. J. Becker is superior, and for order, neatness, and comfort is not excelled by any institution in the State. It is beautifully situated at 85 Vernon Street, Roxbury district.

The New-England Moral Reform Society is an organization for a purpose similar to that of the Penitent Females' Refuge Society. It undertakes to reform dissolute women, and aid them to suitable employment; and it also aids the friendless who have fallen. It cares for 30 or 40 women yearly, and its annual expense averages \$4,000. It is located at No. 6 Oak Place. One of its founders, Catherine Kilton, was for 30 years its president. The society publishes a monthly magazine, "The Home Guardian," from which it receives some income. It is further supported by subscriptions, the proceeds of certain investments, and gifts and legacies. The society was organized in 1836, and incorporated in 1846.

The Industrial School for Girls was incorporated in 1855, "for the purpose of training to good conduct, and instructing in household labor, destitute or neglected girls." It is located on Centre Street, Dorchester district, and has accommodations for about 30 girls. The age of admission is from 6 to 10, and places are found for the girls when they leave the school, generally at 18 years of age. Such girls as have relatives or friends able to do so, pay a moderate sum for board, but the most of them are cared for gratuitously. The annual cost of the school is about \$5,000. It is sustained by yearly subscriptions, and income from investments.

The Scots' Charitable Society was incorporated in 1786; but it was in existence long before that time, having been founded in 1657. It is believed to be the oldest private charitable society in the city. Its object is to furnish relief to, and aid in various ways, unfortunate Scottish immigrants, their families and descendants. In 1869 St. Andrew's Home was temporarily established by the society at 73 West Concord Street, where unfortunate Scots were received and cared for until employment was found; but in 1872 the Scots' Temporary Home was permanently established at No. 77 Camden Street. The society also owns a lot at Mount Auburn, where friendless Scots receive burial. The income of the society is derived from a permanent fund, initiation fees, yearly assessments of members, and donations. The membership is now 265. Active members must be natives of Scotland or immediate descendants; but honorary members may be of different nationalities. From 200 to 300 annually receive the benefits of the society. Among the working officers is a committee of charity.

The Charitable Irish Society is another organization of long standing. It was organized in 1737, and incorporated in 1809; and for nearly a century it was the only Irish charitable society in New England. Its original purpose was to furnish temporary loans to needy members, and to relieve friendless Irish immigrants; but of later years it has made annual donations of from \$300 to \$500 to some deserving charity, few members calling for aid. The years immediately following the Revolutionary War, it extended timely relief to those of its members who were disabled, in one way and

another, by the war. Its meetings are held at the Parker House, but it has no established headquarters.

The German Emigrant Aid Society extends a helping hand to German immigrants, principally in aiding them to employment, and providing temporary support; it also aids poor German residents, particularly widows and orphans, or the sick. The society employs an agent to look after immigrants arriving at the port of Boston. It aids about 800 persons yearly. Its income is derived from the invested funds, dues from members (who number 220), and from donations. The society has an office in the Charity Building, Chardon Street.

The New-England Scandinavian Benevolent Society was organized in 1853, and incorporated two years later, its main object being mutual relief: of late years its aid has been given, to a considerable extent, to persons not members. It distributes about \$1,000 a year to the poor. The membership is 180. The office of the society is at No. 3 Tremont Row.

The Massachusetts Society for Aiding Discharged Convicts is a practical organization, which offers a helping hand, when it is most needed, to those who face the world again after a term in prison. It aids the convict just after his discharge, with temporary board, clothing, conveyance to friends, tools to work with, and helps him to find employment. The society was organized in 1846, and was incorporated under its present name in 1867. Among its founders were Charles Sumner, S. G. Howe, Walter Channing, and Edward E. Hale. The average number of convicts helped each year is 350. The funds are provided by yearly subscriptions, gifts, and legacies. It expends from \$2,000 to \$5,000 yearly.

The Young Men's Benevolent Society, organized in 1827, but not incorporated until 1852, is "to assist those who have seen better days," especially respectable persons who are unwilling to make their needs publicly known. It has a standing committee resident in different sections of the city, and applications are received by them. Its expenditures are mostly in supplies and the payment of rents. It obtains funds partly from annual assessments on its members, but chiefly from donations. An average of 1,000 cases of destitution are relieved yearly. The president is Warren Sawyer, and the secretary J. Russell Reed. Its meetings are held in the Charity Building.

The Needlewoman's Friend Society was organized in 1847, and incorporated in 1851, for the purpose of providing employment for indigent females. Materials for garments are supplied by the funds of the society, the cutting is done by the managers, the sewing is given out to poor women at remunerative prices, and the garments thus made are offered for sale at low prices, at the rooms of the society, 149 A Tremont Street. The society also finds permanent employment for poor seamstresses in the finer sort of

needlework. Its funds are raised by subscriptions and donations, and it has received several legacies.

The Boston Sewing Circle does a work similar to that of the Needlewoman's Friend Society. Money for materials, about \$4,000 a year, is raised by annual subscription. Garments are cut by the ladies of different churches each week through the winter; and the work is done by the poor under charge of the several ladies, who pay for it, and distribute the garments, when done, to the poor about them. Each winter it benefits 3,000 or more poor women. The society was formed in 1862, to work for the soldiers; and for a while after the war the garments made for it were distributed to the white school-children of the South. Its headquarters are in the Charity Building. The whole board of managers, of which Miss I. E. Loring is president, is composed of ladies.

The Boston Port and Seamen's Aid Society was incorporated in 1867 by the union of the Port Society and the Seamen's Aid Society. Its aim is to "improve the moral, religious, and general condition of seamen and their families in Boston and its vicinity; to relieve sick and disabled seamen and their families; to afford aid and encouragement to poor and industrious seamen; and to promote the education of seamen's children." The Mariners' House, built by the Port Society in 1847, is a brick building, four stories high, on North Square, and is under charge of an experienced mariner. It accommodates from 80 to 100 persons, and has a chapel, reading-room, and library. S. E. Breen is the pastor, and Capt. J. P. Hatch the superintendent. Rev. S. K. Lothrop is president of the society. Mr. Eastman says, "Bad whiskey and bad women are the curse of the mariner." There were 615 boarders in 1877.

The Bethel Chapel, a modest structure opposite the Mariners' House, seats a congregation of several hundred. It was here that the famous ex-mariner, Edward T. Taylor, better known as "Father Taylor," preached.

Seamen's Bethel, North Square.

The Boston Seaman's Friend Society is a branch of the American Seaman's Friend Society, and has for its object the furnishing of regular evangelical ministrations for seamen, and the employment of other means for their spiritual and temporal welfare. It supports the Salem and Mariners' Church, and Sailors' Home, corner of Salem and North Bennet Streets. Joseph C. Tyler is president, and Capt. Andrew Bartlett is the missionary. This work is principally supported by contributions from the Orthodox Congregational churches of Boston and its vicinity.

The House of the Good Shepherd is a branch of the New-York society of the same name. It was established in 1867, and owes its foundation largely to Bishop Williams of Boston, who provided its first site, a dwelling-house on Allen Street, and supplied its early needs. Its object is "to provide a refuge for the reformation of fallen women and girls;" and it also maintains a "Class of Preservation," made up of wayward and insubordinate girls, whose habits endanger their virtue. The present house is located on Tremont Street, Roxbury district, in a building erected for it. It has provision for 150 inmates, and is crowded. It is managed by the Sisters of the Good Shepherd, a Catholic society originating in France in 1646; but girls and women of all denominations are admitted. A grant of \$10,000 was made by the State in 1870, to aid in building the present edifice.

Boffin's Bower is one of the most original and useful charities in the city. Jennie Collins is the presiding genius of this excellent establishment at No. 1031 Washington Street, where, since 1874, many poor working-women have been fed, clothed, and sheltered until they were able to obtain an honest livelihood. From May 30, 1877, to May 30, 1878, 1,334 women and girls applied for employment; and in the same period of time 1,047 applicants for the services of women made known their wants. The charity is supported by voluntary contributions, and has done good practical work, providing temporarily for unemployed work-women who would, without aid, frequently suffer from hunger or illness; and there is no doubt that many poor girls have been saved from a life of shame by its ministrations.

The Children's Friend Society provides for the support of indigent children, who are either fully surrendered to it, or received as boarders. Those surrendered are indentured at 12 years of age, and remain under guardianship until 18. The society's home, at No. 48 Rutland Street, provides for 70 children. The society has been in operation since 1833, and originated in the personal labors of a Mrs. — Burns, a lady of moderate means, resident at the North End, who received into her own house a number of poor children, and cared for them.

The Boston Female Asylum, at 1008 Washington Street, was founded in 1800. Its name is somewhat misleading, for it is simply a home for female

orphans and half-orphans. Full surrender of the children is required on their admission, and they remain until 18 years of age. Between 70 and 80 children are provided for in the asylum.

The Massachusetts Society for the Prevention of Cruelty to Animals, with office at 96 Tremont Street, was organized in 1868, and has investigated 29,135 cases, and convicted 2,105 persons. The Society has issued more than a million copies of its monthly paper, "Our Dumb Animals," and about 250,000 of its other publications. It has also offered prizes to Massachusetts school-children for the best compositions on "Kindness to Animals," and has given rewards for essays, inventions, and improvements for the benefit of dumb creatures. (A prize of \$500 was offered the person who before July 1878 should do the most to lessen the suffering caused animals in transportation by rail.) It has at present four prosecuting officers in Boston, constantly employed, and about 450 prosecuting agents in the other cities and towns of the State. The amount paid into this society since its organization is about \$150,000. The president is George T. Angell, and the secretary is Abraham Firth.

The Co-operative Society of Visitors among the Poor, organized in 1874, and incorporated in 1877, consists of a body of visitors who make weekly personal visits among the poor. No visitor takes more than four cases, in hope of finding work, or what may be called legitimate relief, for that number of persons. The society has also established work-rooms in the Charity Building, where poor women who really want work can get it. The president is Mrs. James Lodge, and the secretary is Mrs. B. S. Calef.

The Industrial Aid Society was incorporated in the year 1835, under the name of the Boston Society for the Prevention of Pauperism, to which, in 1866, was prefixed "The Industrial Aid Society." This society was founded upon the idea that employment was the best form of charity, and that there was but little opportunity for deception under this rule. Its principles of action have been adopted by other organizations, and by the city in some measure. It finds employment for people, transfers laborers to other places, and returns many to their homes. Its office is in the Charity Building, Chardon Street.

The Ladies' Relief Agency is another of the organizations in the Charity Building, and distributes money and clothing to persons found, by personal investigation, to be worthy of support. The president is Mrs. H. G. Shaw, and the secretary Miss C. Harmon.

The Boston Police Relief Association, organized in 1871, and incorporated in 1876, has its office in the Charity Building. Jan. 1, 1881, it had 447 members. In 1880 it paid \$3,092 to members for "sick benefits," \$2,000 to families on the death of four members, and \$600 to six members on the death of their wives. The president is George F. Gould.

The Boston North-End Mission, organized in 1865 by J. H. Crowell, the former missionary, and incorporated in 1870, is situated at No. 201 North Street; and its operations are chiefly among women and children in the worst part of the city. It has a reading-room, a nursery for the care of children, operates industrial schools for girls and adults, and on Sundays and almost every evening has religious services in its chapel. Besides the mission at the North End, it maintains an industrial home at Mount Hope, six miles from the city. Its funds are derived chiefly from small contributions and subscriptions.

The City Missionary Society is the oldest institution of its kind in the country, having been organized in 1816, and incorporated in 1820. It works not only to bring the non-church-going classes under the influence of religion by personal visits of its missionaries, gathering children and others into sabbath schools, neighborhood and chapel meetings, and the distribution of religious reading, but seeks the physical welfare of the poor by procuring employment for them, providing homes for orphan and destitute children, and extending pecuniary aid. It now employs 23 male and female missionaries, who visit 12,000 families a year. The annual expenditures of the society amount to \$28,000. It is supported by Congregationalists, but is unsectarian in its operations. The headquarters of the society are in the Congregational House, corner of Beacon and Somerset Streets.

The Massachusetts Society for the Prevention of Cruelty to Children was incorporated in 1878. Its headquarters are at No. 1 Pemberton Square. It investigates cases of abuse against any person under 21 years of age, brings the perpetrators before the magistrates when necessary, and cares for neglected and deserted children. It maintains a temporary home at No. 94 Chestnut Street. The president is R. E. Apthorp, and the general agent Frank B. Fay.

The religious associations of all denominations take care of a portion of their own poor; and there are many social, literary, and other organizations, that aid at times their unfortunate members: nevertheless, without referring to those, this chapter could be continued much further by the enumeration of many other institutions similar to those above mentioned. But surely enough has been said to show that the hearts of the Boston people are large, and that the fallen and unsuccessful are taken care of, as far as it seems possible, in a manner fully consistent with the high culture and broad humanity of the citizens. Not only the afflicted within the boundaries of the city are aided, but to every appeal that comes from any part of the world there goes forth a substantial response from the Boston people. The enumeration of the aid sent to other places would require more space than can be given here.

The Pulse of the City.

THE SANITARY CONDITION OF BOSTON, — HOSPITALS, DISPENSARIES, AND ASYLUMS.

THE sanitary condition of Boston will bear favorable comparison with that of other cities. The annual death-rate, 23.53 in 1,000 in 1880, is slightly larger than that of London, but considerably smaller than the average in the other European cities. It also compares favorably with American cities, although those of St. Louis and some other Western cities show a lower rate. The statistics of Western cities are, however, more likely to err in accuracy; and, besides, the mortality is always less in young and vigorous communities, though their sanitary conditions may be far more unfavorable. The sanitary affairs of Boston are under the control of its Board of Health established in 1872, under the pressure of a peremptory popular demand caused by the presence of a terrible small-pox scourge in the city. The Board has, in many respects, arbitrary powers in regard to the public health, and can take almost any measure that may be deemed expedient, in a case of emergency. The principal drawback to a satisfactory sanitary condition is the defective drainage of the city; but this will be overcome by the great system of sewers, now constructing, and referred to in the chapter on "The Arteries of the City." The streets are kept remarkably clean, being regularly swept nine months of the year. The principal streets, about 185 miles, are swept daily, and others twice a week.

The hospitals and dispensaries of Boston are many; but their work is done so quietly and so unostentatiously that few, even of those long resident in the city, are aware of their magnitude, or comprehend the extent, variety, and thoroughness of their operations. At their head stands —

The Massachusetts General Hospital, a noble institution, one of the most complete and perfectly organized of its kind in the country. It is also the oldest, save one, — the Pennsylvania Hospital. It was incorporated in 1811, and opened for the reception of patients in 1821. It was conceived by a number of the public-spirited and generous citizens of that day; and its plan was drawn on a most liberal and extensive scale, showing them to be broad-minded and far-sighted men. A bequest of \$5,000 at the close of the last century, in 1799, was the practical beginning of the enterprise; but it was not until 1811 that the work was undertaken systematically and vigorously. In that year 56 gentlemen were incorporated under the name of The

Massachusetts General Hospital; and the charter granted a fee-simple in the estate of the old Province House, on condition that \$100,000 be raised by subscription within ten years, which was promptly met. The Massachusetts Hospital Life-Insurance Company was required by its charter, in 1818, to pay one-third of its net profits to the hospital. So also were the New-England Mutual Life-Insurance Company, incorporated in 1835; and the State Mutual Life-Assurance Company at Worcester, in 1844. Several other gifts were made it by private citizens, and the funds accumulated with gratifying rapidity. Among the most generous bequests were those of John McLean, — one of \$100,000, and another of \$50,000; this latter to be divided between the hospital and Harvard University. For him is named the

The Massachusetts General Hospital, Blossom Street.

McLean Asylum for the Insane, in Somerville, which is a branch of the Massachusetts General Hospital, established by its trustees in 1816. His name was also given to the street at the foot of which the hospital stands. Prominent among the founders of the hospital was John Lowell, one of the esteemed Lowell family, several of whose members have done so much for Boston, and have been so prominent among its citizens. His father was Judge Lowell, a member of the convention which framed the State Constitution, and who caused to be inserted in the "Bill of Rights" the clause declaring that "all men are born free and equal." For one of his brothers the city of Lowell was named; and another was the Rev. Charles Lowell of the West Church, father of James Russell Lowell, the poet of to-day, now minister to England. John Lowell acquired fame in his day as a political

writer, and during the war of 1812 wrote trenchant articles under the *nom de plume* of "The Boston Rebel," which were especially notable for the vigorous and bold fashion in which they attacked the national administration. Besides being active in the movement to establish the Massachusetts General Hospital, John Lowell was also a founder of the Athenæum, and the Hospital Life-Insurance Company.

The hospital stands at the west end of McLean Street, on what was formerly Prince's pasture. The main building, first built, is of Chelmsford granite, hammered out and fitted for use by the convicts of the State Prison. When completed, it was pronounced the finest building in New England. Charles Bulfinch was the architect. In 1846 it was enlarged by the addition of two extensive wings. Other additions and improvements have from time to time been made; the most recent in 1873-75, when four new pavilion wards were constructed, called respectively the Jackson, Warren, Bigelow, and Townsend wards, in recognition of the valuable services of Drs. James Jackson, J. C. Warren, Jacob Bigelow, and S. D. Townsend. The hospital admits, under light conditions, patients suffering from disease or injuries, from any part of the United States or British Provinces; and provision is made for free treatment, or treatment at the cost to the patient of the expense involved. No infectious diseases are admitted, and chronic or incurable cases are generally refused. On proper call the hospital ambulance, with medical officer, is despatched at any hour to points within the city proper, north of Dover and Berkeley Streets; and the hospital is always ready for any emergency, however sudden or extensive the demand on its resources may be. The hospital, ever since its establishment, has been steadily and greatly aided by gifts and bequests. The donations and legacies of the last year (1880) alone amounted to \$41,751.83. The whole number of patients treated in the hospital in 1880 was 2,284, of whom 2,087 were adults, and 197 children. The whole number of out-patients applying for treatment during the same period was 20,566. From 1821 to the close of 1880 the number of patients in the hospital has been 64,420; of these, 18,802 were discharged well, 13,978 much relieved, or relieved in part, and 4,739 died. The whole number of out-patients treated during the same period was 235,818. About 85 per cent of the number treated in the hospital during 1880 were occupants of free beds. The total free-bed subscriptions for the year were \$11,300; and the free-bed fund, the income of which must be devoted to free beds, amounted to \$457,260. Of the free patients during the year, 20 per cent were female domestics, 31 per cent laborers, 10 per cent mechanics, and 9 per cent minors. The expense of the hospital department in 1880 was \$92,077. A training-school for nurses is also attached to this hospital. A convalescent cottage at Belmont was begun in 1880, to cost \$100,000. James H. Whittemore is the resident physician.

The Boston City Hospital was established in 1864, after many years of agitation, which began in 1849, before the cholera, then epidemic in Boston, had disappeared. The necessary authority was given the city by the Legislature in 1858; two years later the land was appropriated; in 1861 the work of building was begun; and May 24, 1864, the buildings were dedicated, and a month later were formally opened for patients. The buildings front on Harrison Avenue, and occupy the square, containing nearly seven acres, bounded by Harrison Avenue and Concord, Albany, and Springfield Streets. The hospital buildings present a beautiful and unique appearance. When substantially completed and occupied in 1864, the hospital consisted of a central or administration building, two three-story medical and surgical pavilions, and the necessary auxiliary buildings, including boiler-house and laundry. To these were added, in 1865, a two-story building for isolating wards; a small building, at the main entrance to the grounds, containing rooms for out-patients; and an addition for dead-house, morgue, and autopsy-room. In 1874 a medical building, a surgical building, each three stories high with basements, two one-story surgical and medical pavilions, and a low building for kitchen, bakery, and other purposes, were erected. The total cost of the buildings alone was \$610,000. The hospital has at present 375 beds; and, when the plan is fully carried out, it will have 525 beds.

Residents of the city suffering from sickness, unable to pay for treatment, are treated gratuitously. Persons accidentally injured are received at all hours, and the ambulances are ready for service on call. Out-patients are also treated by physicians and surgeons connected with the hospital. Once a week operations are performed in the amphitheatre of the hospital before physicians and surgeons. A training-school for nurses is also connected with the hospital. Since the opening of the City Hospital, 65,694 persons have been examined for admission, and 48,367 of them were admitted; 9,001 persons accidentally injured, and 134,674 out-patients, have been treated. During the past year, there were treated 4,707 persons in the hospital, and 10,605 out-patients; visits to the hospital, 37,164. The chief individual benefactor of the hospital was Elisha Goodnow, who gave property valued at \$21,000. The resident superintendent is Dr. George H. M. Rowe.

The Massachusetts Homœopathic Hospital was incorporated in 1855, but was not established and opened for patients till 1871. The first five years it occupied a house in Burroughs Place. Its friends having raised, by means of a grand fair, the sum of \$76,000, land was purchased of the city, and the present beautiful structure was erected on East Concord Street. This building was opened to patients in May, 1876; and in thorough ventilation, delightful temperature summer and winter, bright and sunny wards and private rooms, together with all necessary conveniences and comforts, it has proved one of the most satisfactory hospitals ever built. It has received

THE BOSTON CITY HOSPITAL,

Harrison Avenue, between Concord and Springfield Streets, opposite Worcester Square.

and provided for upwards of 1,000 patients, with a mortality of less than two per cent. The patients are provided with the best food and care; and yet its affairs have been managed with such economy that the cost has been much less than in similar hospitals. Severe and often hopeless cases have resorted here for treatment with great benefit.

The Carney Hospital, founded by the gift of \$13,500 from Andrew Carney, was incorporated in 1865, and occupies a slightly position on Old Harbor Street, South Boston. Its situation, in the judgment of experienced physicians, is the very best in New England. Standing on Dorchester Heights, near the intrenchments erected by Washington, it commands an extensive view over the city on one side, and Massachusetts Bay on the other. In summer the hospital is cooled by the sea-breezes; and the convalescents enjoy a beautiful prospect from their beds, watching meanwhile the vessels passing in and out of the harbor. The hospital was established to afford relief to the sick poor; and, though it is in charge of the Sisters of Charity, it receives patients of all religious denominations. Chronic, acute, and other cases are received, contagious diseases alone excepted. Pay-patients are also treated in the wards or in private rooms. The sister who is at the head of the institution is a very quiet, but most active, energetic, and skilful manager. The present commodious brick building was erected in 1868. The yearly expenditure of the hospital amounts to about \$25,000; and the income from paying patients about \$8,000. During the year 1877 there were fitted up, in one of the wings of the hospital, very spacious and convenient accommodations for the treatment of out-patients suffering from diseases of the eye. The rapid growth of this clinic has shown that it supplies a want long felt in that section of the city.

The New-England Hospital for Women and Children, incorporated in 1863, is located on Codman Avenue, Roxbury district. Its land and buildings cost \$100,000. Its objects are "to provide for women medical aid of competent physicians of their own sex, to assist educated women in the practical study of medicine, and to train nurses for the care of the sick." The institution is an outgrowth of a clinical department of the Female Medical College of Boston, at the immediate suggestion of Dr. Marie E. Zakrzewska. The hospital has a number of free beds, but most patients pay for treatment. It has medical, surgical, and maternity wards; and a dispensary situated at No. 19 Fayette Street, in the city proper. More than 200 patients are annually treated in the hospital, and from 3,000 to 4,000 in the dispensary.

The Free Hospital for Women, at 60 East Springfield Street, established in 1875, for poor and worthy women who suffer from diseases peculiar to their sex, is supported by contributions from individuals and religious societies. Any individual or society supporting a bed has the

right to fill it with any suffering and needy woman, provided the medical staff pronounce her case a proper one for treatment here. The hospital contains 15 beds.

St. Luke's Home, established in October, 1870, and incorporated January, 1872, provides gratuitous medical treatment to women who are convalescent from disease. Connected with the Home is a Sanitarium, at Quisset, in the town of Falmouth, where patients have the advantage of country air during the summer months. The Home, which is situated on Roxbury Street, Highland district, can accommodate 40 patients, and the Sanitarium 35.

St. Joseph's Home for Sick and Destitute Servant-Girls, Nos. 41, 43, and 45, East Brookline Street, is in charge of the Sisters of St. Francis. It was established in 1862, and incorporated in 1867. It includes a hospital for the treatment of curable and incurable diseases. It has 90 beds, of which 24 are in the hospital department.

St. Elizabeth's Hospital, 78 Waltham Street, is in charge of the Sisters of St. Francis. It was established in 1867, and incorporated in 1872, for the medical and surgical treatment of diseases peculiar to women. Most of the patients are free; and the sick poor of any denomination are admitted.

Children's Hospital, 1583 Washington Street.

The Children's Hospital, at 1583 Washington Street, was incorporated in 1869. Children between two and twelve, suffering from acute diseases, are received and treated, if poor, gratuitously; but, if their parents or guardians are able to pay, a moderate charge is made. The hospital has 30 beds. The nursing is under the direction of ladies connected with the Protestant Episcopal Sisterhood of St. Margaret's, from East Grinstead, England. A convalescent Home, as a branch of the hospital, was established at Wellesley, 14 miles from the city, in 1875. Among the founders of the hospital were Chandler Robbins, George H. Kuhn, N. H. Emmons, Dr. Francis H. Brown, and Albert Fearing.

The House of the Good Samaritan, at 6 McLean Street, incorporated in 1860, is for the free treatment of sick women and girls, and of boys under six, especially those suffering from diseases of long duration. It is supported by voluntary contributions and the income from its funds. The

annual expenses range from \$10,000 to \$12,000. It is unsectarian, but Episcopal services are regularly held. The largest bequest it has received was from the late James H. Foster, who left by will \$47,500. Among the corporators was Miss Anne S. Robbins, who has given, from the start, her whole time to the hospital, residing in it, and superintending its details with the aid of a matron. The other corporators were Mrs. George C. Shattuck, Mrs. G. Howland Shaw, Mrs. Charles H. Appleton, Mrs. N. Thayer, Horace Gray, and Henry P. Sturgis.

The Children's Sea-Shore Home, at Winthrop, is one of the most practical of works; and, since its establishment in 1875, it has accomplished an unexpected and most gratifying amount of good. Its object is to give to poor children suffering from disease, and those recovering, the great advantage of the sea-breezes. A competent physician resides at the house; and the nurses are most attentive, having a special interest in their work, most of them volunteering their services.

The Consumptives' Home, a hospital for incurables, is at Grove Hall, Roxbury district, and was incorporated in 1870, six years after it was founded by Dr. Charles Cullis, who is still the manager. It relies wholly on voluntary contributions. From this source over \$300,000 have been received since its establishment, and over 1,700 patients cared for. The Home will accommodate 80 patients. The premises contain, besides the Home proper, two children's homes, a free chapel, and a home for those afflicted with spinal complaints.

Consumptives' Home, Grove Hall.

St. Mary's Infant Asylum, and Lying-in Hospital, on Bowdoin Street, Dorchester, is managed by the Sisters of Charity, by whom the institution was founded in 1870, for "the maintenance and support of foundlings, and orphan and half-orphan children." It also accommodates indigent deserving

women during confinement. As in the Carney Hospital, no distinction is made on account of religion; and no patient is refused on account of her inability to pay the moderate rate asked.

The Channing Home, at 30 McLean Street, is a most worthy institution, a home for incurables, established in May, 1857, by Miss Harriet Ryan, who afterwards became Mrs. Albee. It was incorporated in 1861. The class of patients generally admitted are those who need constant medical assistance and tender care; and no pay is taken from any. Since it was established, 24 years ago, the Home has received 531 patients. It has now 14 inmates. The president is Dr. Samuel A. Green; and the treasurer, Theo. Metcalf.

The Boston Lying-in Hospital was organized in 1832, for the relief of poor and deserving women during confinement. In its present quarters, at Nos. 24 and 26 McLean Street, it has accommodations for 36 patients. Free cases are taken. Patients taken in prior to confinement are charged \$3.50 a week for board, and are expected to perform any light duty required of them. The lowest price for confinement is \$20, which also pays for two weeks next succeeding confinement; and, as a rule, no case is kept longer than two weeks after confinement.

The Hospital of the Public Institutions is located on Deer Island, and has a branch at Rainsford Island. Patients are received from the city almshouse, the House of Industry, and the House of Reformation for Juvenile Offenders.

The Boston Lunatic Hospital, on First Street, South Boston, is a city institution, under the management of the Board of Directors for Public Institutions. The main building was built in 1839; and the two wings were added in 1846. With the yards and gardens, the buildings occupy five acres. The hospital has a capacity for 200 patients. Its use is now restricted to those who have a settlement, so termed, in the city. The poor are admitted without charge. Patients are committed to the hospital by the judge of probate for Suffolk County, or are admitted by the president of the board of directors. The buildings lack many conveniences found in more recently constructed lunatic hospitals; and the city has so far outgrown its provision, that not one-half of the Boston insane people can be accommodated here.

Diet Kitchens, established in different parts of the city, furnish prompt and temporary relief for the sick poor. Plain, nourishing food is here prepared, and given out daily, at all hours, on the orders of the dispensary and other physicians.

The Boston Dispensary, founded in 1796 and incorporated in 1801, is the oldest institution of the kind in the city, and the third in the country. The central office is situated at Bennet and Ash Streets, near the centre of population of the city proper, over which its operations are extended. Physi-

cians are in attendance daily, at stated hours, who treat men, women, and children, perform surgical operations, and dispense medicines. Much practical work is also done outside the central office. The city proper is divided into nine districts, and to each is assigned a physician, whose duty it is to care for those unable to leave their homes. The dispensary is supported by funds heretofore contributed, and by private charity. An idea

of the extent of its work can be formed, when it is stated that since July, 1856, over 600,000 patients have been treated at the central office and in the districts. About 35,000 patients

Boston Dispensary, Bennet and Ash Streets.

are treated yearly. The staff of physicians and surgeons at the central office give their services gratuitously; and those serving in the districts at a very small compensation. In the Charlestown and Roxbury districts, there are also free dispensaries. That in the Charlestown district was organized in 1872, and incorporated the next year. It is located at No. 27 Harvard Square. Its founders were Richard Frothingham, Edward Lawrence, T. R. Lambert, John T. Whiting, and Charles E. Grinnell. The Roxbury dispensary was founded in 1841, but has since been merged in the Roxbury Charitable Society, founded in 1794, and its duties discharged by the latter society, whose office is at No. 118 Roxbury Street, Roxbury district.

The Homœopathic Medical Dispensary in 1856, its first year of incorporation, treated 195 patients. Its work has steadily augmented year by year, and in 1880 it furnished upwards of 35,000 prescriptions to 13,000 patients. The central office, at 14 Burroughs Place, is open daily from 10 to 12. The college branch occupies the basement of the building of the Boston University School of Medicine in East Concord Street, and is divided into the following departments: medical, surgical, dental, eye and ear, women's,

children's, chest, throat, and skin. There are connected with this branch 24 physicians. With the aid of the college faculty, clinical instruction in the various departments is furnished to the medical students. The West-End branch, in the Charity Building, Chardon Street, is open daily from 10 to 12, and, in addition to the general department, has also one under the care of women physicians, for the diseases of their sex. The whole dispensary is supported mainly by a fund raised by a fair held in 1859 in the Music Hall, which netted \$13,000, the income of which has provided treatment for 50,000 sick persons. The large number who now flock to it will render additional funds necessary.

The Dispensary for Diseases of Women, at 18 Staniford Street, was organized in 1873, and is made available for the purposes of clinical instruction. It is in charge of Dr. James R. Chadwick.

The Dispensary for Diseases of Children, at the same place and for the same purposes, is in charge of Dr. Charles P. Putnam.

The Massachusetts Charitable Eye and Ear Infirmary was originated in 1824 by Drs. Edward Reynolds and John Jeffries, and was incorporated in

Massachusetts Charitable Eye and Ear Infirmary.

1826. During the first year, there were treated at the Infirmary 698 patients; and the number has steadily increased, compelling the institution to

be removed from place to place, until 1850, when the present building, on Charles near Cambridge Street, was erected. The building is of brick, and has two wings. The main building measures 67 by 44 feet. In the basement are kitchens, wash-rooms, laundry, etc.; in the first story are receiving and reading rooms; in the wings are the male wards, with operating, apothecary, and bath rooms; in the second story are accommodations for the matron and the female wards. The building is surrounded by a yard, and is shut out from the street by a high wall. The work is rapidly outgrowing the accommodations. In 1880 no less than 10,000 patients were treated. The annual increase for the past few years has been about 800. The name of the institution has been a hinderance to its growth, leading the community to believe it to be a State charity, and thereby averting donations that would probably come to it, and which are really needed to carry on its great work. Patients from all parts of this continent are treated at this Infirmary, which is one of the most important, but at the same time one of the most poorly-supported, charities in the State. Dr. George Stedman is the superintendent.

The Washingtonian Home was organized in 1857, and incorporated in March, 1859, for the cure of men addicted to intemperance. Its present location is in building No. 41 Waltham Street; and its income is entirely derived from board and treatment of the inmates. Since the beginning it has received over 6,000 inmates, many of whom have been free patients. For a time the State aided it. Dr. Albert Day is the superintendent.

The Adams Nerve Asylum was incorporated in 1877, and opened in 1880. Its projector was the late Seth Adams, a wealthy Boston sugar-refiner, resident in Newton, who bequeathed for its establishment property valued at the magnificent sum of \$600,000. It is a curative institution, for the benefit of indigent, debilitated, nervous people, inhabitants of the State, who are not insane. Its beautiful site is in the Jamaica Plain district, and comprises 24 acres (the estate of the late J. Gardner Weld) on Centre Street, adjoining the property of the Bussey Institution. The building accommodates 30 patients. The incorporators were John N. Barbour, James C. Davis, Aquila Adams, Emory Washburn, Alpheus Hardy, Samuel Eliot, Charles H. Dalton, James B. Thayer, William Clafin, John E. Tyler, Amor L. Hollingsworth, James Longley, Samuel A. Green, Robert Willard, Caleb W. Loring, Samuel D. Warren, Rufus Ellis, Joseph Burnett, S. B. Stebbins, Charles F. Choate. The superintendent is Dr. Frank W. Page.

The Massachusetts Medical Society was formed in 1781. It includes 17 distinct societies, which together have a membership of over 1,400 physicians practising in Massachusetts. The by-laws provide that a member must possess the following among other qualifications:—

"That he is not less than twenty-one years of age; that he is of sound mind and good moral character; that he has a good general English education; that he has a knowledge of the principles of experimental philosophy; that he has such an acquaintance with the Latin language as is necessary for a good medical and surgical education; that he has studied medicine and surgery three full years under the direction, and attended the practice, of some reputable, regularly educated physician or physicians; that he has attended two terms of study, or two full courses of lectures in separate years, at an authorized medical school, recognized by the councillors of said society, and possesses a diploma or its equivalent from such school that he does not profess to cure diseases by, nor intend to practise, spiritualism, homœopathy, allopathy, Thomsonianism, eclecticism, or any other irregular or exclusive system, generally recognized as such by the profession or declared so by the councillors of said society; and by a further examination, a part of which shall be in writing, that he has an adequate knowledge of anatomy, pathological anatomy, physiology, general and medical chemistry, *materia medica*, therapeutics, midwifery, the theory and practice of medicine, clinical medicine, surgery, clinical surgery, hygiene, and public hygiene."

The Old Morgue, North Grove Street, has been in operation for over 20 years. It is a primitive affair, and a movement was begun in the fall of 1873 for a larger and more modern building. The morgue proper is a small room, with a single stone in its centre for the exhibition of bodies for recognition. Adjoining it is an autopsy-room. Keys are placed at the police-stations of the North and West Ends, and at the offices of the harbor-police and the city undertaker. It is in charge of the board of health.

The New Morgue is connected with the City Hospital, and is of a modern style, and fitted-up somewhat like the Paris morgue. Four bodies can be exposed for recognition at a time.

The Medical Examiner is an office that was substituted for that of coroner, which was abolished in 1877 by act of the legislature. In the place of forty or fifty commissioned officers, some of whom were of questionable integrity, and not properly qualified, the work of making special investigations of the causes of sudden or mysterious deaths, when such are deemed necessary, is performed by two men, physicians in good standing, called medical examiners. These are commissioned by the governor, serve for seven years, and receive \$3,000 a year as salary. The present medical examiners for Suffolk County are Francis A. Harris and Frank W. Draper. Whenever they deem a formal inquest necessary in any case, it is brought before the local courts. By this change a large saving is made to the county treasuries, there is less liability of abuse, and a more satisfactory result is obtained.

The Boston Medical Association, organized in 1806, holds its meetings annually, on the first Monday in May. Its objects are to regulate the charges of physicians, and to aid in promoting the interests of the medical profession. Its secretary is Dr. Francis H. Davenport.

The Boylston Medical Society of Harvard University was founded in 1811, and incorporated in 1823, for the purpose of promoting emulation and inquiry among the students at the Medical School. The president is always a member of the Massachusetts Medical Society. Ward Nicholas Boylston, the founder of this society, left it a fund from which prizes are given to those members of the society whose medical dissertations are most approved. The president is Dr. M. H. Richardson, and the secretary is C. S. Holden.

The Boston Society for Medical Improvement was organized in 1828, and incorporated in 1839, for the cultivation of confidence and good feeling between members of the profession, the eliciting and imparting of information upon the different branches of medical science, and the establishment of a museum and library of pathological anatomy. The secretary is Dr. E. G. Cutler.

The Boston Society for Medical Observation was organized in 1846, to make its members good observers of disease, to collect and arrange accurately recorded facts in furtherance of the cause of medical science, and to publish from time to time the results of the examination of such facts. The original society in 1835 was composed chiefly of students, and was founded on the plan of a Paris association. Dr. A. M. Sumner is the secretary.

The Massachusetts Homœopathic Medical Society was organized in 1840, and incorporated in 1856, and is the oldest society of this school in the country. It has 200 active members; holds its annual meeting on the second Wednesday of April, and its semi-annual meeting in October. Its meetings are earnest and interesting, and are attended by many physicians who are not of the homœopathic faith. It publishes each year a volume of transactions. Its officers are: J. T. Harris, M.D., of Boston, president; Herbert A. Chase, M.D., of Cambridge, secretary; H. C. Clapp, M.D., of Boston, treasurer.

The Boston Homœopathic Medical Society holds its meetings in the Medical College, East Concord Street, on the second Thursday of each month. It has 100 members. Horace Packard, M.D., is secretary.

The Massachusetts College of Pharmacy was incorporated in 1852. Its main objects are to regulate the instruction of apprentices, to diffuse information among the members of the profession, and to discountenance the sale of spurious, adulterated, and inferior articles. Applicants for admission to its membership must have been actively engaged in the wholesale or retail

drug business. There is a School of Pharmacy, under the control of the college, before which lectures are delivered during the winter season; and the degree of graduates in pharmacy is conferred upon students who go through the whole course, and satisfactorily pass the examination. The college, for its lecture-room and laboratory, occupies the third story of the Old Franklin Schoolhouse, 1151 Washington Street; the rooms being granted free of rent by the city of Boston. There are about 65 members of the college, and 88 students attending the school. The laboratory is one of the largest and most thoroughly equipped in the city. There is also a complete collection of crude and rare drugs and of the finest specimens of chemicals. The library contains about 500 bound volumes and 1,500 pamphlets of works on pharmacy, and comprises a very valuable collection of its kind. In connection with the library of the president, close at hand, and at the service of the college, it forms the second largest pharmaceutical library in the United States. The president is B. F. Stacy, and the secretary is Henry Canning.

The Boston Druggists' Association has a membership of about 75, including persons engaged in the wholesale or retail drug-trade, paint and oil firms, medicine houses, and co-ordinate branches of the trade, in Boston and vicinity. Its object is the furtherance of the interests of those lines of business, and to afford the men engaged in them an opportunity of meeting with one another on social terms "around the festive mahogany." The monthly dinners are held at the Parker House. The society was organized in 1875; and its officers are: president, Thomas Doliber; secretary, Henry Canning.

Our limited space forbids the further sketching of the several medical societies of Boston. Among those not heretofore mentioned are the Obstetrical Society, organized in 1860; Boston Society of Medical Sciences, 1869; South-Boston Medical Club, 1873; Association of Life-Insurance Examiners, 1873; Boston Microscopical Society, 1874; Roxbury Society for Medical Improvement, 1867; Dorchester Medical Club, 1866; Walker Society for Medical Improvement, 1872.

The Bones of the City.

THE OLD BURIAL PLACES AND TOMBS, AND THE NEW CEMETERIES.

THE cemeteries in the city proper are ancient burial-places, which are not used nowadays, the city having forbidden by ordinance all burials in graves in the city proper, interment in tombs only being allowed; but they are maintained and respected for the hallowed dust they contain, and for their historic associations. Now and then utilitarians agitate their removal for some public "improvement;" but the influence of the conservative Bostonian, jealous of his city's good name and reputation, is promptly brought to bear, and thus the dead are respected, and the ancient graveyards, the most interesting of the old landmarks, are saved from the hand of desecration.

The King's Chapel Burying-Ground is believed to be the oldest in the city, though the exact date of its establishment is not known. Situated in a busy part of the town, and crowded into narrow compass, under the shadow of the quaint old church, it is a most interesting spot, as it contains the remains of Gov. John Winthrop, his son and grandson who were governors of Connecticut; Gov. Shirley; Lady Andros, the wife of Gov. Andros; John Cotton; John Davenport, the founder of New Haven, Conn.; John Oxenbridge; Thomas Bridge; and other well-known personages of the olden time. Burials ceased here, as a rule, in 1796. Unfortunately the grave-stones were moved from their original places some years ago by a city officer possessed of the mania for "improvement," and placed in rows, so that it is now impossible to tell the location of any given grave. At one time during the last century a great deal of excitement was occasioned by a rumor that some one had been buried alive in this burial-ground; but the affair terminated peacefully when the doctors who had attended the deceased testified in the matter.

The Old Granary Burying-Ground, between the Park-street Church and the Tremont House, dates from 1660, and contains the graves of many famous men, including eight governors of the early day,—Bellingham, Dummer, Hancock, Adams, Bowdoin, Sullivan, Eustis, and Sumner; the Wendells, Lydes, Checkleys, and Byfields; Peter Faneuil, Dr. John Jeffries, Uriah Cotting, Judge Samuel Sewall, John Hull, Paul Revere; Thomas Cushing, at one time a member of the council which was the executive of

Massachusetts, and at another lieutenant-governor; the Rev. Drs. Eckley, Belknap, Stillman, Lathrop, and Baldwin; the parents of Benjamin Franklin; and the victims of the Boston Massacre. The territory was once a part of the Common; and the old town granary, which formerly stood where the Park-street Church now stands, gave to the cemetery its name.

Gateway to the Granary Burying-Ground, Tremont Street.

the city with the British when it was evacuated in 1776. These trees were removed, to the great grief and indignation of many old citizens, to meet a demand of the street-railways. Inside the enclosure, however, are many fine trees; and, though they do not shade the busy throngs which hurry by, they contribute much to the picturesque appearance of the old burying-ground with its winding narrow paths, and its old graves and sombre tombs.

The Central Burying-Ground, originally called the South Burying-Ground, is the only other cemetery in this section of the city. It is a small one on the Common, near Boylston Street. It was established in 1756. The British soldiers who died of disease during the occupation of the city, and those who died of wounds received at Bunker Hill, were buried here. The grave of M. Julien the restaurateur, whose name has been given to a kind of soup which he made, is also here.

The Copp's-Hill Burying-Ground, three acres in dimensions, at the North End, near the old Christ Church, was the second burial-place estab-

It is protected by a substantial iron fence, with an imposing gateway in its centre; and on the sidewalk in front of it stood, until a few years ago, a row of noble trees, known as the Paddock elms, which were imported from England, and set out in 1762 by Capt. Adino Paddock, a wealthy carriage-builder, and a leading loyalist during the revolutionary struggle, who left

lished in Boston, and was first used for interments in 1660. It was originally called the North Burying-Place. The oldest gravestone bears the date of 1625. There are many quaint epitaphs, some of which are illegible from age. Among the illustrious dead who were buried in this ground are Edmund Hartt, builder of the frigate "Constitution," the Rev. Drs. Increase, Cotton, and Samuel Mather, Andrew and John Eliot. A willow standing in the north-east corner of the grounds was brought from Napoleon's grave at St. Helena. In the Revolutionary times the British soldiers occupied Copp's Hill as a military station: it is told that they found sport in firing bullets at the gravestones, the marks of which can still be seen on some of them. When the hill was cut down, the burying-ground was left untouched, and its embankment is now protected by a high stone wall. It is an attractive spot, in a part of the city, which, once quite aristocratic, now possesses little attraction. From its high grounds a fine and extensive view can be had.

The Mather Tomb, Copp's Hill.

The Old Charlestown Burial-Ground, on Phipps Street, Charlestown, is spoken of in the records for the first time in 1648. The earliest gravestone is that of Maud, the wife of William Russell, bearing the date of 1642. The tombstones in this graveyard are about the only antiquities in Charlestown, almost every building in the place having been burned by the British at the battle of Bunker Hill. Thomas Beecher, one of the original settlers, ancestor of the famous Beecher family, and John Harvard, the founder of Harvard College, are buried here.

Forest-Hills Cemetery is a beautiful burial-ground in the West-Roxbury district, about 5 miles from the centre of the city. It includes about 225 acres, and is finely laid out, on high ground. Miles of winding avenues and foot-paths lead over hills and through little valleys and glades. To the exceptional natural beauties of the place are added the artistic effects produced by landscape-gardening. In the summer a profusion of flowers and shrubs is seen on every hand. There are pretty little lakes, handsome rural groves, and on the heights one catches glimpses of beautiful distant scenery. The main entrance is from Scarborough Street, through an ornamental stone gateway, on the outer face of which is the inscription, "I am the Resurrection and the Life." On the inner face are the words, "He that keepeth thee will not slumber." There are other entrances on the south and east, from Canterbury and Walk-Hill Streets. From the main entrance, three carriage-drives diverge towards different parts of the grounds. In the northern portion of the cemetery are Consecration Hill, on which is a rustic

observatory 25 feet high, and Chapel Hill. Four eminences farther south are named Eliot Hills, after the Indian apostle, John Eliot, to whom a monument will be erected here. On Warren Hill is the tomb of Gen. Joseph Warren, the lamented hero of Bunker Hill. On Dearborn Hill is a monument to Gen. H. A. S. Dearborn, who originally laid out the grounds. On Fountain Hill is a pretty spring, and the office of the commissioners. Other heights are known as Cypress, Clover, Juniper, and Strawberry Hills. In Lake Dell is a picturesque sheet of water, overshadowed by Snowflake Cliff, named after the flowers that grow at its foot. "Lake Hibiscus" is the largest pond. Near Lake Dell is a fine receiving-tomb of granite. Among the most interesting monuments is a block of rough granite from the Kearsarge Mountain, which marks the resting-place of Admiral Winslow. There is also a fine bronze statue in the soldiers' lot, erected by the city of Roxbury, in memory of her citizen soldiers who fell in the war, and which is noticed in another place. This cemetery was established by the city of Roxbury before its annexation to Boston, and was consecrated in 1848.

Mount-Hope Cemetery is near Forest Hills, in the West-Roxbury district, and now belongs to the city. It is managed by a board of commissioners. The grounds include 106½ acres picturesquely laid out, with several ponds and many fine trees and shrubs. The main entrance is through a massive gateway of granite and iron. The city of Boston has erected a soldiers' monument here; and Charles Russell Lowell Post 7 of the Grand Army of the Republic has a military memorial composed of heavy cannon given by the National Government. It is a simple but tasteful monument. On a triangular stone base stand three cannon, forming the outline of a pyramid, their mouths meeting at a common point, and supporting a fourth; and beneath is a pyramid of cannon-balls.

St. Augustine Cemetery situated in South Boston, and established in 1818, is the oldest Catholic burying-ground in Boston. It has a small chapel, which is now little used. Here is buried the Rev. Francis Antony Matignon, a French priest, one of the earliest Catholic clergymen in Boston. His funeral, on the 21st of September, 1818, was a notable event. The body was escorted through the streets by a number of acolytes, bearing lighted candles, and was temporarily placed in the Granary Burying-Ground: it was removed to South Boston in the following spring. Here is also buried Dr. Thomas J. O'Flaherty, who died in 1839, and was somewhat famous for a great theological controversy with Dr. Lyman Beecher. There is also a Catholic burying-ground in Charlestown, close to the Church of St. Francis de Sales, on the summit of Bunker Hill; and another in the Roxbury district, adjoining St. Joseph's Church, on Circuit Street, near Forest Hills. There are also two large cemeteries, — one in Dorchester, and the other, Calvary, adjoining Mount-Hope Cemetery, — belonging to the

FOREST-HILLS CEMETERY.

W. B. Smith, Printer, 1870.

Boston Catholic Cemetery Association, which was first incorporated in 1857 as the Catholic Cemetery Association in Dorchester, its name having been changed to the present in 1877. The Dorchester Cemetery is now full, containing 25,000 persons buried within its limits. In Calvary, 18,000 persons are buried. The association has recently bought the Home Farm in the West-Roxbury district, close to the Brookline and Newton lines: this has been laid out in an artistic style by a professional landscape-gardener, and dedicated in the spring of 1879 as the Mount-Benedict Cemetery. The office of the association is at No. 2,382 Washington Street, Roxbury district.

There is a small Israelitish cemetery in East Boston, at the corner of Byron and Homer Streets. It was established by the society of Ohabei Shalom, and is but 100 feet square. A peculiar appearance is given to the place by all the tombstones bearing Hebrew inscriptions, though some of them are also partly in English.

Among other cemeteries is the ancient, almost forgotten, and quite neglected, Roxbury burying-ground, at the corner of Washington and Eustis Streets, nearly opposite the Hotel Comfort. The famous Indian apostle, John Eliot, is buried here, as well as many other men prominent in the by-gone days of Roxbury. There was formerly a Friends' burying-ground on Congress Street; but it was discontinued in the early part of this century, and the bodies removed to Lynn. It is not generally known that under King's Chapel, Christ Church, and St. Paul's Church, there are yet tombs. Those which had long been under Park-street Church were discontinued, and the bodies removed to Mount Auburn, in 1862; and the society of St. Paul's Church petitioned in the fall of 1878 for leave to discontinue further interment in its tombs. In South Boston there were tombs under St. Matthew's Church, which were discontinued in 1867. The principal place of burial for the northerly sections of the city, including East Boston and Charlestown, is Woodlawn Cemetery in Everett.

Mount Auburn, the famous cemetery in Cambridge and Watertown, is outside of the city limits, but directly associated with Boston. This is the oldest garden cemetery in the United States, and was established in 1831, by the Massachusetts Horticultural Society, in connection with an experimental garden. The idea of the cemetery originated with Dr. Jacob Bigelow, who was corresponding secretary of the Horticultural Society, and who had for many years realized the evils arising from burials under churches, or within crowded cities or towns. In 1835 when a charter was granted to "**The Proprietors of the Cemetery of Mount Auburn**," the Horticultural Society, upon condition of receiving one-fourth of all sales, transferred the title to that corporation. The cemetery comprises about 135 acres. Its principal elevation, surmounted by a tower, is 125 feet above the level of the Charles River, which winds at its foot. Many of the most eminent dead of New England are buried here.

The Social Side of the City.

THE PLAYHOUSES, PUBLIC HALLS, CLUBS, SECRET AND OTHER SOCIETIES.

THERE was a time when Boston, in respect to the drama, was the first city in America. Although that distinction cannot be claimed now, there is still ground for pride in the high position occupied by the playhouses of the city; and it is safe to say that in no other city in the United States do real merit and worth in stage-matters meet with more generous approbation or reward. Of the drama in its infancy here, Shaw's "Description of Boston" (1817) gives the following interesting sketch: "1794, — the first regular theatre was established in Federal Street, under the management of Charles Stuart Powell. In consequence of a misunderstanding between him and the proprietor, Col. Tyler was appointed to the management; but, not succeeding, he relinquished, and was succeeded by John Brown Williamson. In the mean time the friends of Mr. C. S. Powell raised a sum sufficient to build of wood the Haymarket Theatre, one of the most spacious and convenient theatres ever erected in America." This house was opened in 1796. Mr. Williamson having failed, in 1797, as manager of the Federal-street Theatre, it was taken by Barrett & Harper. During the season this theatre was burned. It was rebuilt, and opened in 1798 under the management of Mr. Hodgkin, who in 1799 failed, and removed his company to the Haymarket. G. L. Barrett then succeeded him, and failed before the year was out. In 1800 Mr. Whitlock sunk \$4,000 there. In 1801 Powell & Harper took the theatre. The latter retired the next year; and Mr. Powell ran the concern till 1806, when he took in some partners. Powell & Duff were joint managers in 1817. "The first building erected purposely for theatrical entertainments in Boston was opened the 3d of February, 1794, with the tragedy of 'Gustavus Vasa Erickson, the Deliverer of Sweden.' The selection of the play was judicious, as it suited the temper of the times." Of the present theatres, and most conspicuous public halls, brief sketches will be given.

The Boston Theatre is at the present time the largest theatre in New England; and, indeed, there are but few larger anywhere. It has a brilliant record, and is conducted with liberal enterprise by Tompkins & Hill, the proprietors. The theatre, which was built by a corporation, was opened to the public in the autumn of 1854, and quickly took a leading position among

the places of amusement of New England. Thomas Barry was the first manager. The exterior of the building is hidden from view by the structures about it, and the wide front entrance is all that can be seen from Washington Street. There is another entrance on Mason Street. Inside, the spacious lobbies, the grand staircase, the richly-furnished salons, and the immense auditorium form a very imposing *ensemble*. In comfort and elegance combined, the interior of the Boston equals, if it does not surpass, the most famous opera-houses of the European continent; such, at least, is the testimony of those whose experience makes them competent judges. The stage is very large, and all the appointments are on a liberal scale, in keeping with the size of the house. Besides the parquette, which is about 90 feet in diameter, there are three large balconies, known respectively as the dress-circle, the family-circle, and the gallery. The ornamentation of the walls, balconies, and ceilings, is elaborate and tasteful. The grand promenade saloon is 46 by 26 feet in dimensions, and 26 feet high. There is an excellent stock company; the members being called upon to support the various star performers whose engagements recur pretty regularly each season. All the most famous actors of the day have played repeatedly at the Boston, and are likely to do so for many years to come. The grand opera also finds an appropriate home on this stage; and many brilliant engagements have been played here by renowned native and foreign *prime donne*, whose names alone are sufficient to fill every seat in the house. It is also famous for its fine presentation of the spectacular drama. The theatre seats 3,000 people, and has held almost 4,000 people at one time. The means of egress are so perfect that it is claimed 1,000 people can be dismissed in a minute. The prices of admission range from \$1.50 down to 30 cents. The general admission is 50 cents. The treasurer is John M. Ward, the musical director N. Lothian, and the business-agent H. A. M'Glenen.

The Globe Theatre is a short distance above the Boston Theatre, on the opposite side of Washington Street, and has entrances on that thoroughfare, Essex Street, and Hayward Place. It is the second "Globe Theatre" on this site. The first, originally named Selwyn's Theatre, was built in 1867, and in 1873 was destroyed by fire. The present building was erected in 1874. John H. Selwyn, Charles Fechter, and W. R. Floyd were successively its managers. The theatre was the enterprise of Dexter H. Follett and Arthur Cheney. After the retirement of Mr. Follett, Mr. Cheney continued as sole proprietor. In the rebuilt theatre 150 seats were held by gentlemen, each one having paid \$1,000 for his seat; and to this extent they were stockholders. Mr. Cheney died in November, 1878. He was succeeded in the management by John Stetson, once a proprietor and manager of the Howard Athenæum. For a brief season Mr. Stetson conducted the theatre in conjunction with Mr. Cheney, and thereafter, for another season, alone. Then

the theatre was closed until the autumn of 1879, when the lessees of the estate took possession of the property. On the 1st of January following, Mr. Stetson obtained from all the lessees, with the exception of Asa P. Morse, leases of the theatre for six months; and in October, 1880, he succeeded in obtaining a satisfactory lease for ten years. He greatly altered and improved the theatre, adding to its attractiveness, and so adorned and beautified it as to make it one of the most inviting, convenient, and comfortable theatres. Its interior is rich and brilliant, and thoroughly stocked with theatrical paraphernalia. Its stage is one of the best in the country. The auditorium is 60 feet in height. There are two large balconies, a row of mezzanine boxes, and elegant proscenium boxes. A handsome curtain is used; and the scenery is fine and abundant, no theatre being better equipped. The season of 1875-76 is remembered with pleasure by those who were fortunate enough to witness the admirable little stock company then playing here. The seasons of 1879-80-81 were distinguished for the brilliant engagements of the late Adelaide Neilson, Mlle. Bernhardt, and Signor Salvini. The Globe has seats for about 2,200.

The Boston Museum is the oldest existing theatre in Boston, and has long been an established favorite with play-goers. Its history dates back to 1841. In June of that year it was first opened to the public in a building on the site of Horticultural Hall on Tremont Street; and in 1846 the present substantial and attractive structure on Tremont near Court Street was erected. It was first called "The Boston Museum and Gallery of Fine Arts;" and the performances, which were subordinate to the exhibition of curiosities and paintings, consisted of light musical entertainments. In 1843 the first regular dramatic company was established. The opening performance in the new building was on Nov. 2, 1846. William Warren, the famous veteran comedian, first became connected with the Museum in 1847; and his first appearance was on the 23d of August that year, as *Billy Lackaday* in "Sweethearts and Wives." Miss Annie Clarke, who is now the leading lady, began her career on the Museum stage in 1861; and Charles Barron, the present leading man, first became a member of the company in 1868. The first stage-manager was W. H. Smith. After sixteen years' service he was succeeded by E. F. Keach, who had for nine years been the leading man in the company. Mr. Keach managed from 1859 until his death, Jan. 31, 1864, when the sole management was assumed by R. M. Field, who has since conducted the theatre with signal success and recognized ability. The Museum is owned by Moses Kimball. It is a four-story stone building; the front ornamented with three rows of large gas-jets with heavy globes, which, when lighted at night, well advertise the playhouse. It covers 20,000 square feet of land, extending from Tremont Street through to Court Square, upon which there is an exit. The auditorium has been

reconstructed four times, — in 1868, 1872, 1876, and 1880. The last was the most extensive and radical reconstruction, the interior having been practically rebuilt. It is now one of the most elegant theatres in appearance, decoration, and furnishings, in the city. An improved system of ventilation has been introduced, as well as every modern improvement to be found in the best-equipped theatres of the day. It has a seating capacity of 1,500. It has a double balcony, parquet-circle, orchestra and proscenium chairs, and six private boxes. Prices range from \$1 to 35 cents.

The Park Theatre, although one of the youngest of the leading theatres, stands among the foremost for the attractiveness of its interior and the excellence of its entertainments. It was built in 1879; and the opening performance was given on April 14 of that year, Lotta being the attraction in Olive Logan's translation of "*La Cigale*." The theatre is Beethoven Hall reconstructed and practically rebuilt. It stands on Washington Street, near the corner of Boylston, and has a spacious entrance, with an exit also on Bumstead Court. The auditorium is 60 feet wide, 63 feet from the stage to the doors, and 50 feet high. On the lower floor are the orchestra stalls and parquet (which comprise the whole section of the lower floor inside the circle rail), and the orchestra-circle (the seats outside the iron columns supporting the dress-circle). The first balcony is the dress-circle and the "balcony" so-called (the first two rows being thus designated), and the second balcony the family-circle and gallery. The house seats 1,184. Its interior decorations are tasteful and elegant; and its seats are richly upholstered, roomy, and comfortable, and are so arranged as to afford an unobstructed view of the stage from each. There are four attractive proscenium boxes. The performances are furnished chiefly by "stars" and leading dramatic companies. Henry E. Abbey and John B. Schoeffel are the managers, who also manage the Park Theatre and the Casino in New York. The Park is amply provided with exits, and can be cleared of a large audience in a few minutes. Prices of admission from 50 cents to \$1.50.

The Gaiety Theatre on Washington Street, next to the Boston Theatre, was opened to the public on the evening of Oct. 15, 1878, under the management of J. Wentworth, formerly of the *Théâtre Comique*. It was formerly the Melodeon Hall. It is an attractive and comfortable little theatre, and by reason of its small size is admirably adapted for comedy; the performers being easily seen and heard from every part of the house. It will seat about 800 persons, — 500 on the floor, and 300 in the balcony, — and has standing-room for an additional 200. The auditorium has a bright, cheerful appearance, and the decoration is tasteful. The walls and ceiling are panelled in pink, with buff, gold, and purple borders; and the balcony fronts are in bronze, gray, and pink. The auditorium is lighted by a sun-burner in the ceiling. The stage is 60 feet wide and 30 deep, and the pro-

scenium-opening has a width of 32, a height of 38, and a clear opening of 28 feet. The prices range from \$1 to 35 cents.

The Howard Athenæum, on Howard near Court Street, was built and opened in 1846, on the site of the old Miller Tabernacle. The management first presented the legitimate drama, and some famous performances have been given within its walls. It is now the leading novelty or variety theatre, and in that field has been very successful. In its management there have been several changes the past few years. In 1880-81 the theatre was leased to William Harris, who was also the general manager. This season the joint-lessees are William Harris and Isaac B. Rich, who had been for a long time its proprietor. The Howard seats 1,500 people, and the prices range from \$1 to 35 cents.

The Windsor is an "up-town" theatre, on the corner of Washington and Dover Streets. It was formerly called "The Novelty," and before that "Williams Hall." The hall was altered into a theatre in December, 1878. It was unoccupied for some time, and in the season of 1879 was opened as a variety theatre. Its name was changed to "The Windsor" in 1881; and with the beginning of the fall theatrical season it was opened under new management, with John A. Stevens as lessee, and Daniel D. Hopkins, manager. The property is owned by the proprietors of Williams Market. It is an attractive little theatre.

Halleck's Alhambra at South-Boston Point, on East 6th Street, near P, was built by Thomas E. Halleck in the spring of 1880. It is a wooden structure, originally used as a skating-rink; in altering it for employment as a theatre, an inclining floor was adopted. It will seat 1,600. It is chiefly a summer theatre, presenting novelty and variety performances.

The Dudley-street Opera House, formerly Institute Hall, in the Roxbury district, on the corner of Washington and Dudley Streets, was opened as a theatre in 1879; the interior of the hall having been altered to conform to the requirements of a theatre. It has an inclined floor, with opera-chairs to seat 700 persons. The stage is small but convenient, and the house has an inviting appearance. There are three entrances to the auditorium, and one to the stage. Nathaniel J. Bradlee is the proprietor, and William C. Blodgett the manager.

The Boylston Museum is a small variety theatre on Washington Street, near Boylston. It is managed by G. Lothrop, and seats 930 people.

Summer-Garden Theatres were established in 1879 and 1880. The principal ones are at Forest Garden, on the Egleston-square line of the Metropolitan Street Railway, and Oakland Garden, on the line of the Highland Street Railway; both in the Roxbury district. These are lightly built, for summer use only. The performances are of the variety order or light English opera.

The Boston Music Hall ranks among the finest and largest public halls in the world. It was built in 1852 by an association of friends of music, the impulse having been given at one of the annual dinners of the Harvard Musical Association. The hall has no external architectural features worthy of mention, it being almost entirely surrounded by other buildings. Glimpses of its plain brick walls are caught through Hamilton Place, from Tremont Street, and through Central Court from Winter Street. There are two entrances,—one on Central Court, and the other on Tremont Street, opposite the Park-street Church. The effect of the interior is grand and imposing, and the acoustic properties are remarkably fine. The hall is 130

The Great Organ, Music Hall.

feet long, 78 feet wide, and 65 feet high. Two balconies run around three sides of the hall, the total seating capacity of which is 2,585. The hall is lighted by a line of hundreds of gas-jets along the cornice. The great organ is one of the largest and finest in existence. It was built by Walcker, in Ludwigsburg, near Stuttgart, Germany. It contains 5,474 pipes, 690 of which are in the pedal organ; and it also has 84 complete registers. Its case, designed by Ham-matt Billings, is a fine example of artistic wood-carving. The organ was contracted for in 1856, and was first heard by the public in a grand concert given Nov. 2, 1863. Its cost was \$60,000. It is one of the many attractions to strangers visiting the city; and during a large

portion of the year weekly concerts are given, beginning at noon, to display its capacity and power, and the purity of its tone. In front of the organ stands a bronze statue of Beethoven, said to be the finest portrait-statue in America. In a niche in the opposite wall is a copy of the Belvedere Apollo; and on the same wall are three fine busts of composers, which with their beautiful brackets were the gift of Charlotte Cushman. Hundreds of the most distinguished musicians and orators have appeared in Music Hall. Beneath the large hall is a smaller one, called Bumstead Hall. It is arranged like an amphitheatre, and is principally used for the rehearsals of the Handel and Haydn Society. From time to time the removal of the

THE TREMONT TEMPLE ORGAN.

Built in 1880 by

E & G. G. HOOK & HASTINGS, BOSTON.

Note.— The Organ extends back of the screens upon either side, making its extreme width sixty feet; its entire height being forty-two feet. It has four manuals, sixty-six registers, ten pedal movements including a grand crescendo pedal, and 3,442 pipes.

Music Hall, to make way for business improvements, has been threatened. It has more than once been seriously proposed to extend Hamilton Place to Washington Street, thus cutting through the territory on which it stands; and the musical community has been considerably disturbed by the agitation of these propositions. In the summer of 1881 a controlling share in the ownership was purchased in the interest of its retention, and its interior was considerably freshened and improved. It is in this hall that the great majority of the most noteworthy concerts of the musical season are given from year to year.

Tremont Temple was rebuilt in October, 1880, to replace the Tremont Temple destroyed by fire on Aug. 14, 1879, and now contains one of the best halls in this country. It occupies the site of the old Tremont Theatre on Tremont Street, between School Street and Montgomery Place. It had its origin in the desire to provide a place of worship where the seats should be free to all; and as a result a building was erected at a cost of over \$230,000. An association called the Evangelical Baptist Benevolent and Missionary Society was formed to promote the ends for which the enterprise was undertaken, and also to engage in a general work of charity and benevolence. The greater por-

Tremont Temple, Tremont Street

tion of the building is still used for these purposes, the large hall being occupied for Sunday services by the Union Temple Church. Here are the headquarters of the New-England Baptists, together with the offices of the Baptist Missionary Union and the New-England department of the Home Mission Society. The Baptist Social Union, composed of representatives from all Baptist churches in the city and vicinity, holds its monthly meetings in the building. The Temple façade is shown in the accompanying illustration. The main hall is 122 feet long, 72 feet wide, and 66 feet high. It has, beside the main floor, a first and a second gallery, with a total seating capacity of 2,600. In it is a grand Hook & Hastings organ, one of the largest and finest in America. It is the fourth organ this firm has built for the Tremont Temple. It is of great power and of singular

beauty, and is a favorite instrument with musicians. It has four manuals, sixty-six registers, and 3,442 pipes, and unusual mechanical resources. Beneath the main hall is the Meionaon, a smaller hall, but cosy, convenient, and attractive, with a seating capacity of nearly 1,000, and used for religious, temperance, and other meetings. The several entrances are commodious, and afford an almost instantaneous exit from the halls. On the same floor as the main hall is the office of Thomas C. Evans, an advertising agent of national reputation. Adjoining his office is that of Solomon Parsons, secretary of the Association which holds the title to the property.

The New Mechanics' Hall, in the building of the Massachusetts Charitable Mechanics' Association on Huntington Avenue, corner of West Newton Street, will be one of the largest halls in the world. It will have a seating capacity of 8,000, and the famous Roosevelt organ and Whittier passenger-elevators. During the triennial exhibitions it is used in connection with the rest of the building for exhibition purposes. Its acoustic properties, it is expected, will be unusually good.

Horticultural Hall, the home of the Massachusetts Horticultural Society, is a handsome structure of white granite, on Tremont Street, between Bromfield Street and Montgomery Place. The society, incorporated in 1829, is

the oldest horticultural society in the country, excepting that of Pennsylvania. Since its foundation it has held horticultural exhibitions every Saturday through the growing season, besides an annual exhibition in September, and special shows of roses, strawberries, etc., in their seasons. On these occasions the choicest fruits, flowers, plants, and vegetables, of the newest and finest varieties, are shown, and have done much toward

Horticultural Hall, Tremont Street.

cultivating a knowledge of and taste for horticulture and the best means of improving its productions. Liberal premiums have been offered, and the society may fairly claim to have done more for the advancement of horticul-

ture than any other in the country. To this society also the community is indebted for the establishment of Mount-Auburn Cemetery. In 1844 the society built a hall on School Street, believed to be the first permanent building ever erected by any horticultural society. This was removed in 1860, and the present building was dedicated in 1865. The front is of a dignified and monumental character, and is embellished with elegant works of art, comprising costly statues of Ceres, Flora, and Pomona. The ground-floor is occupied by stores; the second story by the Library Room of the society and a hall for the weekly exhibitions; and the upper story by a large and elegant hall used in addition to the lower hall at the annual and other important exhibitions. Both of these halls are often used for concerts and the better class of entertainments. The society's library, comprising over 3,000 volumes, is the most valuable collection of horticultural works in the United States. The halls are adorned with portraits and busts of the presidents, founders, and benefactors of the society.

Union Hall, in the building of the Young Men's Christian Union on Boylston Street, is a favorite hall for concerts and private theatricals, its stage being fitted up for the special accommodation of the latter. It has a seating capacity of 522, is beautifully decorated, and comfortably furnished.

The Association Hall is on the third floor of the Young Men's Christian Association building, on the corner of Tremont and Eliot Streets. It is provided with piano and organ, and is used for concerts, lectures, and other entertainments. Its seating capacity is about 700.

The Parker Memorial Hall, at the corner of Berkeley and Appleton Streets, is the place of worship of the Twenty-Eighth Congregational Society, and was built to commemorate the renowned preacher, Theodore Parker. It has a seating capacity of 850. The first floor is devoted to the rooms of the Parker Fraternity, the well-known social organization connected with the society.

The Paine Memorial Building is on Appleton Street, between Tremont and Berkeley Streets. It was built in commemoration of Thomas Paine. The famous San Francisco millionaire, James Lick, gave \$18,000 towards the building-fund. The hall has seats for 800 persons.

Investigator Hall, in the Paine Memorial Building, has seating capacity of about 600.

The Mechanics' Hall in the building of the Massachusetts Charitable Mechanics' Association, corner of Bedford and Chauncy Streets, is pleasantly and conveniently arranged. It was formerly much used for chamber concerts, but is now principally devoted to the purposes of the association.

Wesleyan Hall, in the Methodist building on Bromfield Street, is much used for lectures and other occasions where the audiences are not large. It is now used for the rehearsals of the Boylston Club. Its seating capacity is about 300.

The Hawthorne Rooms, named in honor of Nathaniel Hawthorne, in Dr. J. C. Warren's new building on Park Street, are elegant and tasteful. They are specially devoted to morning lectures, given between 12 and 1, after a style which has for some time prevailed in London, and which has lately become quite popular in Boston. They are also used for evening entertainments of a high character, are reached by an elevator, as well as by a broad staircase, and have a seating capacity of about 250.

The Turnhalle, in the building of the Turnverein, on Middlesex Street, is the central gathering-point of the German population. A description of it will be found in another part of this chapter.

Faneuil Hall, on Faneuil-Hall Square and Merchants' Row, is illustrated and described in the chapter on "Markets and Exchanges."

Other Halls. — Other well-known halls in the city are Papanti's, 23 Tremont Street, where many famous dinners in the past have taken place, and which is now mostly used for dancing; Nassau Hall, corner Washington and Nassau Streets, much used by believers in "isms;" Hospitaller Hall, 751 Washington Street, which, with Codman Hall, 176 Tremont Street, is frequented largely by labor-reformers and secret organizations; John A. Andrew Hall, in what was formerly the Essex-street Church, at the corner of Chauncy and Essex Streets, used mostly for political and trades meetings; Concord Hall, on Concord Street, at the South End, used mostly for dancing; and Pilgrim Hall, in the Congregational Building, corner of Beacon and Somerset Streets, used for religious and social gatherings by the Congregationalists and others. In the outlying districts, the Roxbury district has Kennedy Hall, on Warren Street, built by Donald Kennedy of Roxbury; a finely fitted hall, with a seating capacity of 950, used principally for lectures, amateur theatricals, balls, and lyceum entertainments. In the same district, there are also Bacon's Hall, 2185 Washington Street; Highland Hall, 191 Warren Street. In the Dorchester district is the old Town Hall. In Jamaica Plain, West-Roxbury district, is Curtis Hall, a beautiful building, formerly the Town Hall. On annexation the Boston city council gave it its present name in honor of one of the most public-spirited citizens of the district. It is used for public gatherings and social festivities. In the Charlestown district the principal hall is Monument Hall, on Main Street, near the Neck. There are also the City Hall, City Square; Congress Hall, Main Street; Evening Star Hall, Main Street; Freemason's Hall, Thompson Square; Harvard Hall, Bow Street; Ivanhoe Hall, Main Street; Odd Fellows' Hall, Main Street; Waverley Hall, Waverley Block; Winthrop Hall, Main Street. East Boston has Lyceum Hall, on Maverick Square; Webster Hall, Webster Street; and Sumner Hall, near Meridian Street, with seats for 800 persons. South Boston has Wait's Hall.

The Clubs, and there are many of them, constitute one of the most characteristic features of Boston. Some are unique and peculiar in their management and purposes. In these clubs are drawn together the various little groups of people who in a great city are congenial to one another, either from holding relative positions in wealth and station, or from having similar desires in mental, social, and physical culture.

The Temple Club, established in 1829, is the oldest. Its building, at No. 35 West Street, is the only one designed expressly for club uses, and presents a modest front, while the interior is admirably arranged for the special purpose for which it was designed. The club is a small one; and its reputation for good-fellowship is of long standing. The admission-fee is \$100, and the annual assessments are not allowed to exceed that amount.

The Somerset Club is the most fashionable and exclusive. It was organized in 1852, and was an outgrowth of the Tremont Club. It first occupied the substantial granite mansion-house on the corner of Beacon and Somerset Streets, now known as "The Congregational House;" and in 1872 it moved to the magnificent granite-front residence on Beacon Street, opposite the Common, built by the late David Sears, from whom it was bought. The interior of the house is elegant, and at the same time has an exceedingly comfortable look. A notable feature is a ladies' restaurant, for guests of the members, which is also open to non-members accompanying ladies on club-order.

There is also a charming ladies' supper-room, overlooking the Common. The membership was originally limited to 250; but it is now fixed at 600. Applications for membership are determined wholly by a

Somerset Club House, Beacon Street.

committee on elections. The admission-fee and annual assessment-fee are \$100 each. On the site of the present Somerset Club house was the home of Copley, the famous painter.

The Union Club was established near the close of the Rebellion, as a semi-political club, in support of the Union cause; but it has since lost its political character, and has become a social club of the highest respectability. The bench and bar are well represented in it. Its first president was Edward Everett; and among his successors have been such men as Charles G. Loring, Richard H. Dana, jun., Henry Lee, and Lemuel Shaw, son of the great chief justice. Its membership is limited to 600. Applicants for admission must first be reported on favorably by the committee, and then voted on by the club; one black ball in five is sufficient to exclude. The entrance-fee is \$100, and the annual assessment \$50. A feature of the club is its excellent *table-d'hôte* dinners. The club-house is conveniently and pleasantly situated on Park Street, opposite the Common, and was formerly the residence of Abbott Lawrence.

The Central Club is of recent origin, established in 1869 by prominent South-End residents. Its first meetings were in the St. James Hotel, and its first club-house was on Concord Street. The present building, first occupied in 1872, is a conspicuous brown-stone building on Washington Street, at the corner of Worcester Square. From its spacious cupola can be had a splendid view of the city proper and the Highlands. The building is not large, but it is well arranged, and substantially furnished. The club has a large membership. It is social, not political; but it happens that several of its most prominent members are leading Republicans.

The Suffolk Club has rooms in a brick building at No. 4½ Beacon Street. One writer describes this club as "an association for the development of the pleasurable social affinities of seemingly incongruous kinds of character." To this club belong a number of prominent Democratic politicians.

The Athenian Club is an outgrowth of the Boston Press Club. It was designed to be a purely professional club; but in the course of time a large number of non-professionals were admitted. The journalistic, dramatic, and musical elements, however, are still prominent in the direction of the club affairs, and give the tone to its management. The club-house was for some time on Tremont Place. It now occupies comfortable quarters at 168 Tremont Street, fronting the Common. Occasional dinners, and receptions to dramatic and other celebrities, are features of the club. Albert A. Folsom, superintendent of the Boston and Providence Railroad, is president.

The New-England Woman's Club is one of the institutions of Boston. It was organized ten years ago by prominent ladies, and had its home at first in Tremont Place. It afterwards removed to more spacious quarters on Park Street, opposite the Common, a few doors from the Union Club.

BOSTON CLUB-HOUSES.

- CLUBS**
1. Suffolk Club, Beacon Street.
 2. Temple Club, West Street.
 3. Union Club, Park Street.
 4. Central Club, Washington St.
 5. Union Boat Club, Charles River.

It is very select, and gives receptions, breakfasts, and "teas" to distinguished guests; and it has regular weekly meetings, at which essays are read and discussions indulged in.

The St. Botolph Club is one of the newest club-organizations. It was organized in 1880, and grew out of a desire to establish in the city a club fashioned after the Century Club in New York, its membership composed of representative professional men. It has a large membership, including many prominent literary men, artists, and lawyers, and several of the best-known clergymen of the city. The club-house, at No. 85 Boylston Street, opposite the Public Garden, is handsomely decorated and comfortably furnished; and its art-gallery, in which there are annual and other exhibitions of a high order of merit, is one of its chief features. Names of candidates for admission to the club must be presented by two members, and posted, and then passed upon by a special committee, who alone elect. The entrance fee is \$50, and the annual assessment \$30. Francis Parkman is president of the club.

The University Club was organized Feb. 16, 1881, to afford the officers of all departments of Harvard University an opportunity of becoming acquainted with one another, and of acting somewhat concertedly to advance the interests of the institution. Its membership includes only the Corporation, the Board of Overseers, the Academic Council, and the leading representatives of the Library and of the Peabody Museum.

The Boston Tennis Club, organized in 1879, occupies for exercise in the game a brick building on Buckingham Street near Dartmouth Street.

The Appalachian Mountain Club was organized in 1876, and in 1878 re-organized and chartered. Its object is to bring together for co-operation all those interested in the mountains of New England and adjacent regions, in rendering the mountain resorts more attractive by building paths, camps, and other conveniences, constructing and publishing accurate maps, and collecting all available information concerning the mountain regions. It also aims to collect and make available the results of scattered scientific observations of all kinds. The club holds monthly meetings during the winter seasons, and field-meetings during the summer, incidentally organizing expeditions to accessible points of interest. It also publishes papers read at its meetings, in the form of an occasional magazine entitled "Appalachia," and is accumulating a library. Prof. Charles E. Fay, of Tufts College, is president, Rest F. Curtis secretary, and Charles W. Folsom treasurer. It has about 450 active members, and a number of honorary and corresponding members. Its headquarters are at the Institute of Technology.

The Civil Service Reform Club was organized in 1880 to agitate reform in the system of appointments to office in the civil service, and to publish literature in behalf of such reform. Its membership is large. Moorfield Story is president.

The Antiquarian Club was organized in 1879 for the purpose of collecting and preserving historical records. Its headquarters are at No. 16 Pemberton Square. Samuel M. Quincy is secretary and treasurer.

The Saturday-Morning Club is of recent organization, and consists of about sixty young ladies, who listen to lectures from literary and scientific celebrities, and meet for "mutual improvement," and perhaps "mutual admiration" as well.

The Literary Clubs of Boston have no club-houses, but meet generally at some leading hotel around the festive mahogany. The Saturday Club, also known as the Literary Club, dines once a month at Parker's, and always on the last day of the week. It is famous for the literary and scientific celebrities who have from time to time belonged to it. The Papyrus Club meets monthly at dinner, at the Revere House. Its membership is two-thirds literary, and one-third miscellaneous. One black ball in five excludes a candidate for admittance. The Chestnut-street Club, formerly called the Radical Club, by which name it is best known, meets weekly at the residence of its founder on Chestnut Street; and the essays and discussions by men and women of letters, and advanced thinkers, are regularly reported in the leading daily journals.

The leading clubs of actors are the Macaroni, the Ace of Clubs, and the Americus. The latter has rooms on Tremont Street, opposite the Museum. The two former meet once a month at the Parker House. The Wednesday-evening Century Club, and the Thursday Club, are associations of gentlemen representing, for the most part, professional life, who meet at the houses of one another.

The Union Boat-Club, organized in 1851, is one of the oldest boating organizations in the country. Its club-house is at the foot of Chestnut Street, on the Charles River, at the head of the famous boat-racing course. It is an attractive building, in the Swiss style, with gymnasium and rooms for the convenience of the members, who number 130. The club rowed in a race at Hull, in 1853, in which its boat was steered by the bow oar, instead of by a coxswain, the first time that it was done in this country. It introduced the first wherry-race on the Charles in 1854; and in 1857 its crew won the Beacon cup from the Harvards. The club, as an organization, has not been represented on the Charles of late years.

The Boston Yacht-Club was organized in 1866, and chartered in 1868. It was the first club formed in Boston for yachting purposes, except a small club that began in 1834 and ended in 1837. It was also the first yacht-club chartered by the State. At present it comprises 250 members and 80 yachts, and owns considerable property at City Point, South Boston. The club-house, finely situated on the shore, is open to the winds, easterly and southerly, that sweep over Boston Harbor and Dorchester Bay, and commands a

pleasing view in all directions. The conveniences for boating purposes, and the charms as a place of resort for its members in summer months, give it exceptional attractions. The officers of the club are: commodore, F. H. Peabody; vice-commodore, William B. Merrill; rear-commodore, J. Pfaff;

Boston Yacht-Club House, City Point.

secretary, Thomas Dean; treasurer, Augustus Russ. The two last named have filled the same offices since the organization of the club.

The South-Boston Yacht-Club was organized in 1868, and incorporated in 1877. It has 139 members, and the yachts enrolled number 44. Its house, 30 by 45 feet, has a good wharf, is conveniently arranged, and admirably situated on the extreme point of South Boston. It was the first house erected in Massachusetts by a yacht-club. The officers are: commodore, Robert Disbrow; vice-commodore, F. G. Cooley; fleet-captain, James Donovan; secretary, William Morris; treasurer, John Winniatt.

Other Yacht-Clubs include the East-Boston Club, Thomas Stone, commodore; Bunker-Hill Club, George H. Brown, commodore; Dorchester Club, Frank W. Weston, commodore; as well as a few composed of Boston men which have their houses outside the city limits.

The Boston Chess Club has rooms at 198 Washington Street. The secretary is John B. Rhodes.

The Boston Natatorium, which was started in 1880, was abandoned before any thing definite was accomplished.

The Boston Base-Ball Association was incorporated in 1871, and supports the "Boston Nine," or "The Red-Stockings" as it is often called. Most of the stockholders are business-men who do not expect any returns

from their investments, which were made merely to encourage the game. The Association has had large and comfortable club-rooms at 786 Washington Street, opposite Hollis Street. During the winter the members of the Nine exercise themselves at the gymnasium of the Young Men's Christian Union. From the beginning Harry Wright has been the captain, secretary, and manager.

The **Union Athletic Club** was organized in 1875 by a few members of the old Union Gymnasium on Washington Street. It has fall and spring meetings, open to all amateurs. The liberal prizes offered by the club have at times brought to Boston some of the best amateur athletes. The club has the use of the Boston Base-Ball Club grounds. Its headquarters are in the Young Men's Christian Union building: and its officers are William M. Olin, president; E. A. Church, secretary and treasurer.

The **Lacrosse Club** is a part of the Union Athletic Club, and was formed in 1878. It won the cup offered by the city of Boston, to be competed for by the Ravenwoods of Brooklyn and this club. At the expense of this club, the Indian Team of Montreal played in Boston, and showed to great advantage the Lacrosse game, which is destined to become quite popular.

The **Boston Turnverein** was organized in 1849, and incorporated in 1871. The society, comprising about 375 members, almost all Germans, owns the Turnhalle on Middlesex Street. The building, which was erected in 1876, cost, with the land, \$65,000. It contains a thoroughly-equipped gymnasium; billiard-rooms; bowling-alleys; a hall having a seating-capacity of 500, and a stage for private theatricals, concerts, and other entertainments; a reading-room, with library of 1,000 volumes; and restaurant, parlors, and reception-rooms. The Turnverein is partly a benevolent organization. Its dues are: for active members \$9.00 a year, which entitles the member to a weekly payment of \$5.00 in case of sickness; and for passive members \$6.00 a year. The society also issues a small weekly periodical, called the

Turnhalle, Middlesex Street.

"**Turner-Zeitung.**" The president is H. W. Young; the treasurer, Julius Meyer; the secretary, Otto H. Schmidt.

Secret Societies are also numerous and strong in Boston. There are Masonic societies, the Knights Templars, the Odd Fellows, the Knights of Pythias, the Improved Order of Red Men, the Knights of Honor, the Independent Order of Good Templars, the Templars of Honor, the German Order of Harugari, the Sovereigns of Industry, the United American Mechanics, the Independent Order of Foresters, the Order of Alfredians, and the Grand Army of the Republic.

The Masonic Temple, in which are gathered the majority of the several Masonic organizations in the city, and which is the headquarters of the grand lodge, is an elegant and imposing granite building, on the corner of Tremont and Boylston Streets, with octagonal towers rising to the height of 120 feet, while the height of the building proper is 90 feet. The Tremont-street front is 85 feet wide. The entire building, with the exception of the street and basement floors, is occupied by the Masonic organizations. It is seven stories high. It has three large halls for meetings, furnished one in the Corinthian, one in the Egyptian, and the third in the Gothic styles. The corner-stone was laid on St. John's Day, June 22, 1867, with imposing ceremonies, and one of the largest of Masonic street-processions. President Johnson was present on the occasion, a conspicuous figure in the parade. The Masons, before the building of the present Temple, occupied as headquarters a building on the site of the present building, which, together with the Winthrop House adjoining it, was destroyed by fire in 1864. At an earlier period the building now used as the United States Court House, on Tremont Street, corner of Temple Place, was the Masonic headquarters.

Masonic Temple, Tremont Street.

The Odd Fellows' Hall is an elegant and imposing building completed in 1872. Its situation is an admirable one, to show its architectural design to the best advantage, on the corner of Tremont and Berkeley Streets, both of which are wide streets. It covers 12,000 square feet of land, and is con-

structed of Concord and Hallowell white granite. It is four stories high. The street floor and basement are occupied by stores. The largest halls are in the fourth story, one 54 by 94 feet, and 25 feet high in the clear; and the other a banquet-hall, 26 by 110 feet; both these halls are provided with ample ante-rooms. Other halls in the spacious building are the encampment-hall in the roof; the lodge-halls, with ante-rooms and side-rooms, and the grand-lodge office and grand master's private room, all in the third story. The grand entrance is from Tremont Street. In the second story is the large hall, and also numerous offices from which rent is received; so that, with what is received from renting the stores, offices, and hall, the

Odd Fellows' Hall, Tremont Street.

revenue from the building is good. This building was built by the Odd Fellows' Hall Association, which was incorporated in 1870. The money was raised at once, the site purchased, and in the summer of 1871 the corner-stone was laid, with the customary ceremony, and the event was duly celebrated. In the Charlestown district there is a commodious Odd Fellows' Hall at No. 25 Main Street; in the Highland district, at No. 2298 Washington Street; and in the West-Roxbury district, on Green, corner of Boylston Street, Jamaica Plain.

The Grand Army of the Republic is a secret semi-military organization, composed exclusively of honorably discharged soldiers and sailors who served in the army and navy during the civil war. It is organized into posts, State departments, and a national encampment; and its objects are to perpetuate the fraternity and comradeship formed in the camp and on the battle-field, to care for the needy and destitute and the widows and orphans

of those who fell, and to cultivate a spirit of unswerving loyalty to the national government. In the State there are 140 posts, which annually disburse over \$34,000 in relief, the greater part to persons not belonging to the order. The headquarters of the Massachusetts department is at 53 Tremont Street. Capt. George W. Creasey is the department commander; James F. Meech, who succeeded Henry B. Peirce when the latter was elected secretary of state of Massachusetts, assistant-adjutant-general; Edward T. Raymond, assistant-quartermaster-general. Thirteen posts are chartered in Boston, which bear the names of distinguished soldiers and patriots, and are styled in Grand Army circles, Charles Russell Lowell Post 7, John A. Andrew Post 15, etc.

The **Militia** of Massachusetts was wholly re-organized under the law of 1878. Exclusive of the corps of cadets, which are unattached, it is divided into two brigades, both of which have their headquarters in Boston, — the first brigade, Brig.-Gen. Hobart Moore, at Boylston Hall; and the second brigade, Brig.-Gen. Eben Sutton, at 5½ Beacon Street. The Boston organizations belonging to the first brigade are: Cos. A, D, C, K, and L of the First Regiment of Infantry, Col. Nathaniel Wales, headquarters Globe Theatre; Co. L, Sixth Regiment, armory 3 North Russell Street. The Boston organizations belonging to the second brigade are: Battery A, First Battalion Light Artillery, Capt. Nathan Appleton, headquarters corner of Harrison Avenue and Wareham Street; the First Battalion of Cavalry, Major Dexter H. Follett, headquarters 37 Tremont Street; Cos. A, D, and H, of the Fifth Regiment of Infantry, Col. Ezra J. Trull, headquarters 82 Main Street, Charlestown district; Cos. A, B, C, D, E, G, and H of the Ninth Regiment of Infantry, Col. Wm. M. Strachan, headquarters 61 Court Street. The whole militia of Massachusetts, under the new law, is limited to sixty companies of infantry, three of cavalry, three of light artillery, and two corps of cadets. The First Corps of Cadets, formerly called the Independent Corps of Cadets, Lieut.-Col. Thomas F. Edmands, headquarters 94 Tremont Street, was organized in 1741, and has always been the body-guard of his Excellency the Governor. The National Lancers (Co. A), a famous cavalry organization, now belongs to the First Battalion of Cavalry, which also includes the Roxbury Horse Guards (Co. D).

The Boston School Regiment comprises the boys of the public Latin and high schools. A corps of cadets is connected with the Massachusetts Institute of Technology, military drill being obligatory upon the lowest class. The boys of the Chauncy-Hall School have an efficient military organization.

The **Ancient and Honorable Artillery Company** is the oldest military organization in the United States. It was formed in 1638 as "The Military Company of Boston." In 1657 it was recognized as an artillery company. The title "Ancient and Honorable" first occurs in the records, September,

1700. The "Honorable" was assumed from the circumstance that its captains had belonged to the Honorable Artillery Company of London. The company dispersed during the Revolution, but was revived in 1789. The "election sermon" has annually been preached before the company, since 1639, with the exception of five years during Andros's government. For many years it has been the annual custom of the governor to personally commission the officers on the Common. The company no longer belongs to the militia, and is now more of a social than a military organization. The members still retain their ancient privilege of exemption from jury-duty, — a feature which induces many business men to become members of this company. The headquarters of the company are in Faneuil Hall.

The Mercantile Library Association, for more than fifty years a leading literary institution in Boston, has recently been re-organized on a new basis, and now offers many of the advantages of club-life, while retaining its literary features. Its building is on the corner of Tremont and Newton Streets; the South End Branch of the Public Library, to which its library has been transferred, being in the basement. The parlors are ornamented with portraits and statuary, and supplied with the most desired newspapers and magazines. In the second story are rooms for conversation and social games, in which smoking is allowed. Literary and musical entertainments are given during the winter months. The terms of membership are \$5 a year. The president is S. S. Blanchard, the treasurer A. C. Fearing, jun.

The Central Lunch Club is a modest association of about 125 gentlemen engaged in various pursuits, whose places of business are in the vicinity of State and Congress Streets. Here in a quiet place called Post-office Avenue, leading from Congress Street to the Merchants' Exchange, are the cosy and neat club-rooms where the members get their noonday meal. Non-members are admitted on invitation of members. The entrance-fee is \$15, and the assessments never exceed \$15 a month. The members comprise an aristocratic party of leading professional and business men, many of whom are graduates from Harvard College. The president is N. P. Hamlen, and the secretary and treasurer is Francis Curtis.

The Benevolent and Protective Order of Elks is a secret benevolent organization. At first its membership was confined chiefly to actors, but it is now composed of persons from all professions. As the theatrical element is predominant, the lodges located in cities throughout the country secure an annual "benefit" at some local theatre. The Boston Lodge, No. 10, received about \$3,100 from its benefit at the Boston Theatre in 1879. The lodge was organized May 23, 1878, and its rooms are at No. 176 Tremont Street. A co-operative plan of life-insurance is conducted by the order.

There are other clubs and many societies for social, religious, educational, and divers purposes, some of which will be noticed in other chapters.

The Boston Society of Architects was organized May 22, 1867; the object of organization being to promote the interests of architects and their art. The society has had no stated headquarters for several years, but meets monthly at some hotel. The officers are: President, Edward C. Cabot; vice-president, John H. Sturgis; treasurer and secretary, William G. Preston.

Boston Latin School Association.—This society of teachers and scholars of the Boston Latin School was organized in 1844, and incorporated in 1845. Its purpose has been to provide libraries and cabinets for the school, and to promote its general welfare. The number of living members is about 500, and the list includes many noted names. The association has in the school building a library of 3,000 volumes, and a large number of busts, portraits, and other property. It also owns Greenough's marble statue representing the *Alma Mater* of the school. A dinner is given annually by the Association at the Parker House,—the site of the old school. The president is Charles K. Dillaway; vice-president, Rev. Edward Everett Hale; librarian, Moses Merrill; secretary and treasurer, Grenville H. Norcross, 35 Congress Street. The standing committee is composed of Rev. Henry F. Jenks, Stephen G. Deblois, Horace E. Scudder, William Gallagher, jun., and Henry W. Haynes.

The Insurance Offices.

LIFE, FIRE, MARINE, ACCIDENT, AND OTHER INSURANCE COMPANIES.

TO the insurance companies Boston is greatly indebted, not only for the protection afforded her commercial interests and the aid rendered widows and orphans, but also for several of the finest edifices in this country. And probably no class of edifices attract more attention, or cause deeper interest to the thoughtful mind, than the various insurance offices, the architectural beauty of which is simply the outward show of the grand success that has attended the institutions in carrying on their humane work on sound and healthy principles of insurance. The close margins on which business in general is now conducted do not allow the individual to hazard his person or his property to any possible loss without taking some additional protection. And therefore we have insurance providing for loss caused not only by death, by fire, and by the perils of navigation, but also by sickness, by bodily injuries, by explosion of steam-boilers, by the breakage of plate-glass windows, by lightning, and by burglary. The various insurance companies having become quite numerous, the Commonwealth in 1855 assumed critical supervision over them, and created the insurance department, from whose 26th annual report (for 1880) we find that 214 insurance companies were authorized to do business in Massachusetts, nearly all of them represented in Boston. The following interesting table is compiled from the reports of Julius L. Clarke, who has been insurance commissioner since 1879.

No.	CLASSIFICATION.	Gross Assets Jan. 1, 1881.	Income 1880.	Risks written 1880.	Losses paid 1880.

¹ Only one reporting. ² No report.

These figures will probably show, even to the casual observer, the formidable insurance interest represented in Boston.

Life-Insurance in America virtually gained its foothold in Boston; for the first statistics gathered that were ultimately used as its basis was a complete table of American life, framed in 1789 by Prof. Edward Wigglesworth of Harvard College. This table was subsequently adopted by the Supreme Court of Massachusetts as a rule in estimating the value of life-estates. In 1811 the Massachusetts General Hospital was established; and the managers were authorized to grant annuities; which was done until an arrangement was made in 1823 with the Massachusetts Hospital Life-Insurance Company, chartered in 1818, to which the business of granting annuities was transferred on a royalty for the hospital of one-third the net profits of the new company. In 1823 Phillips's "Law of Life Insurance," the first American work of its kind, was published in Boston. The New-England Mutual Life-Insurance Company was the second company to obtain a charter from the Commonwealth; and, although chartered in 1835, it did not begin business for several years afterwards, as it was hindered by the hard times, and encumbered with the royalty which was required of all life-insurance companies, of one-third the profits to the hospital. In 1844 the State Mutual Life-Insurance Company of Worcester was incorporated. In 1846 the law regarding payment to the hospital was construed to require only one-third of the net profits after the payment of a six-per-cent dividend to the stockholders; and since that time four life-insurance companies have been chartered by the State. To the credit of the Commonwealth it can be said, that none of the life-insurance companies chartered by it have ever failed or discontinued. Although it is not within the scope of this work to consider the many laws that have been enacted relative to insurance, it certainly is pardonable to mention the "non-forfeiture law," which, enacted in 1861, provides that life-insurance companies shall continue their policies in force until all premiums that have been paid are wholly exhausted, whether the assured pays his annual premium or not. This law, binding only upon the Massachusetts companies, removes one of the former inequities of life-insurance.

The Massachusetts Hospital Life-Insurance Company, referred to above, is still in successful operation; but its business is chiefly confined to trusts and annuities, and, in fact, it transacts no life-insurance business in its modern forms. The office of the company is at No. 50 State Street; and its officers are John L. Gardner president, Samuel C. Cobb actuary, J. C. Braman secretary. Its paid-up capital is \$500,000; and its gross assets, including its trust-funds, are nearly \$16,000,000. The company during the past half-century has paid the hospital a large amount of money. Nathaniel Bowditch, the first actuary, and in fact the originator of the company, remained in its service for many years.

The **New-England Mutual Life of Boston** was the first company chartered in America, to do a life-insurance business in its modern forms; and its career from the beginning has been one of continued prosperity. The company began with a cash capital of \$50,000, being 50 per cent of a guarantee capital that was withdrawn in 1853; and Jan. 1, 1881, its assets amounted to \$15,941,879.40. In 1880 its income was \$2,446,723.53; and its disbursements were \$2,215,850.10, of which \$1,900,805.50 was paid to policy-holders for losses, distributions of surplus, and cancelled policies. From these figures it is seen that the New-England Mutual Life-Insurance Company, both by virtue of its assets and the extent of its operations, is one of the largest corporations of New England. Its remarkable success is due to several causes, but especially to its policy of management. Competent men are carefully chosen for officers and employ  s, and then they are constantly retained by the company. The first president, Willard Phillips,—an author of several standard insurance works,—served for 23 years. His successor is Benjamin F. Stevens, who has been president for the past 14 years, and had previously been secretary for 17 years, and vice-president for 2 years. Mr. Stevens has therefore been connected with this company for 33 consecutive years, and his term of service for one insurance company is longer than that of any other life-insurance officer in America. The first secretary held the office for 4 years; the second, Mr. Stevens, for 17 years; and the present secretary, Joseph M. Gibbens, was elected 16 years ago, after a previous connection with this company of 15 years. The other officers include W. G. McKown, assistant secretary; Dwight Foster, counsel; Walter C. Wright, actuary; John Homans, medical examiner; and George W. Thompson, superintendent of agencies. The benefits of the “non-forfeiture law” were applied by vote of the directors to all the policies of this company in force at the time of the enactment of the law. No insurance company in the world has a better record for able management, profitable investments, and liberal and equitable settlement of all classes of claims.

In 1874 the company erected, on Post-office Square, its present building, which, together with the adjoining building, forms the handsomest block in New England. The fa  ades, in the Renaissance style, are of granite, five stories high, and are surmounted with an iron roof containing two stories. The frontage is 50 feet on Post-office Square, 181 on Congress Street, 69 feet in the rear, and 68 feet in an area. The floor surface is 10,257 square feet. All floors and the roof are constructed of iron beams and brick arches, and there are 22 large burglar and fire proof safes in the building. The first floor has three wide entrances,—one on Post-office Square, and two on Congress Street,—with spacious halls leading to a wide and easy stairway. On this floor are five large banking-rooms. On the second floor are the company’s offices, amply provided with all the conveniences neces-

sary to conduct its extensive and increasing business. The other stories are divided into offices, some of the choicest in the city. The rooms and floors are provided with electric bells and speaking-tubes for communication to and from all parts of the building. The Whittier elevator is run, and the heating apparatus supplied, with steam from boilers placed, for additional security, under an area away from the building. The architect was Nathaniel J. Bradlee.

Among the many occupants of the New-England Life building, are the Everett National Bank, of which Warren Sawyer is president and George E. Carr cashier; the Merchandise National Bank, Israel G. Whitney president, and J. F. R. Foss cashier; the National Webster Bank, Francis Jaques president, and Charles L. Riddle cashier; the Park Commissioners of the city of Boston; and the Whittier Machine Company, Charles Whittier president. The Whittier Company, a sketch of which is given in the chapter on "The Business Houses," put in the elevators, steam-boilers, and steam-fixtures. The American Bank Note Company, several specimens of whose work are to be found in this book, have their office, designing, engraving, and printing rooms in this building. The company have been tenants of the New-England Life-Insurance Company for the past 24 years. The manager of the business is Benjamin C. Leonard. On the upper floors are Rand, Avery, & Co.'s rooms containing their geometric lathes, used in engraving steel plates for railroad tickets; also the offices of many leading lawyers, architects, and mills. Among the latter are the Merrimack Manufacturing Company, Charles H. Dalton treasurer; the Indian Orchard Mills and Atlantic Cotton Mills, William Gray, jun., treasurer; and the Pacific Mills, Henry Saltonstall treasurer. The basement was constructed expressly for, and is now occupied by, the Boston Safe Deposit and Trust Company.

The John Hancock Mutual Life-Insurance Company of Boston was chartered in 1861, as the exponent of the Massachusetts non-forfeiture law, and was the first company to pay a loss under that law, which compels the continuance of a policy in force until the policy-holder has received the full benefits of the premiums paid by him. The assets of the company approach \$3,000,000, and the gross payments to policy-holders amount to more than \$4,000,000. Notwithstanding the general depression, a larger business was done in 1877 than in any year preceding since 1872; the actual increase in amount at risk being \$383,100. During the year 1877 the company introduced the "Industrial Plan," the object of which is to present to the laboring and industrial classes a form of insurance within their reach, that they may be benefited to an extent within their ability to pay. The plan has received the indorsement of insurance experts and the press. This company, through its by-laws, requires the policy-holders, with the aid of experts, to examine its condition at least once each year. During the past

Building of the
NEW-ENGLAND MUTUAL LIFE INSURANCE CO.,

Post-Office Square, Boston

Benj. F. Stevens, President.

Joseph M. Gibbens, Secretary.

four years twenty different persons not connected with the management of the company have made such examinations. The president, Hon. Stephen H. Rhodes, was for six years connected with the insurance department of the Commonwealth of Massachusetts; and the secretary, George B. Woodward, was for six years connected with the New-England Mutual Life-Insurance Company of Boston. The insurance department says that there is no American life-insurance company making more rapid progress to-day than the John Hancock Life-Insurance Company. The office is in Sears Building, corner Court and Washington Streets.

The Mutual Life of New York, which was the first life-insurance company to begin operations in the United States, is to-day the largest moneyed institution in America, and the largest corporation in the world. The company's assets are \$15,000,000 larger than those of the Bank of England. Its gross assets are nearly \$90,000,000, and it has paid to policy-holders the enormous sum of \$121,146,559. As it was organized in 1843, these payments are at the rate of \$3,461,330 per year, \$288,444 per month, \$66,564 per week, and \$9,509 per day, holidays and Sundays included. The number of policies in force Dec. 31, 1877, was 91,553; and the amount of insurance covered by them was nearly \$300,000,000. The income for 1877 was \$18,912,461. These figures barely convey an idea of the magnitude of the Mutual Life Company or its operations; but they do show that the company is justly entitled to own the most elegant structures in which to transact its business. Buildings had been erected in New York and Philadelphia; and it was thought advisable to erect one in Boston that would not only suitably accommodate its extensive New-England business, but also prove a profitable investment. Accordingly, one of the most eligible sites was selected; and now the building stands on Milk Street, majestically fronting Post-office Square. From almost every part of the city and harbor, its marble tower, with gilded balcony, can be seen as an architectural monument of the company's success, that was achieved by honesty, industry, economy, and ability. This superb white-marble edifice is said to be the finest and most complete building of its kind on this continent, and, together with the adjoining building, makes unquestionably the handsomest and most imposing block in New England. To enter into the details of its construction would require more space than can be allotted here. The total height of the tower, the gilded crests, and the iron flagstaff, is 234 feet. From the balcony, 198 ft. 6 in. above the sidewalk, can be obtained the best possible view of Boston and its surroundings. The clock is an interesting feature. It has four dials, each 10 ft. 6 in. in diameter; and the hands are 5 ft. 3 in. long. The striking-hammer weighs 150 lbs., and the bell 3,700 lbs. The clock pendulum is 15 feet long; and the three immense weights, of 2,500 lbs., together with their chains, extend 45 feet below the dials. The winding up

of the clock, every eighth day, requires two stout men, who laboriously turn a crank 241 times for each weight. The building is strictly fireproof, and contains seven floors, including the basement. Among the occupants of the

first floor is the Boston National Bank, of which Charles B. Hall is president. This bank has a cash capital of \$1,000,000, and is the United States Depository. On the second floor is the elegant office of Cornelius G. Attwood, the general agent for Massachusetts of the Mutual Life.

The basement is occupied by the Great Western Despatch, and the Erie and Pacific Despatch, of which H. R. Duval is general manager, and George J. Dockray N. E. General Agent. The Mutual Life is purely mutual. Ex-Gov. A. H. Rice and George C. Richardson are the Boston trustees; and to them the Boston people are greatly indebted for the magnificent structure above mentioned.

Mutual Life-Insurance Co's. building, Post-office Square.

The Mutual Benefit Life-Insurance Co., of Newark, N.J., was organized in May, 1845, and is one of the oldest, largest, and best companies in the country. It is now in the thirty-fourth year of a uniformly successful busi-

ness. It is purely mutual, having no guaranty capital or stock. Its gross assets are about \$35,000,000. This company has more than \$10,000,000 at risk in Massachusetts, the greater portion being on lives of citizens of Boston. It has been represented in this city for more than thirty years, and has paid losses here amounting to more than \$2,300,000. Its total receipts have exceeded \$100,000,000. The president is Lewis C. Grover; and the Boston agents are Hedges & Hodges, whose office is at 178 Devonshire Street.

The Equitable Life-Assurance Society of New York has erected, on

Equitable Life-Assurance Society's Building, Milk Street.

the corner of Milk and Devonshire Streets, one of the grandest and most substantial business edifices in this country. It is one of the most-frequented places in the city. The three comfortable elevators, incased in brick walls, carry up and down about 3,000 persons every day, while the Equitable Safe Deposit Vaults in the basement, and the several leading banks on the first floor, cause thousands of persons to enter the building daily. On the upper floors are the offices of several great railroad companies, the Equita-

ble Life-Assurance Society, and the U.S. signal-service. From the roof, accessible to all, can be obtained one of the most picturesque views of Boston and its surroundings. On the roof is the time-ball that is dropped by telegraph from the Harvard Observatory every day at 12 o'clock, and serves as regulator for the timepieces of the people in the same manner as

the Old South clock did in times past. On the whole, this building, its interior and exterior, is one of the sights of Boston.

There are also 23 agencies for life-insurance companies organized in other States, and 3 agencies for companies chartered by this State.

Fire and Marine Insurance was effected in Boston as far back certainly as 1724, but the business for many years was done only by individuals. The first company chartered by the Commonwealth was the Massachusetts Fire and Marine Insurance Company, in 1795; which continued until 1848, when its charter was revoked. In 1798 the Massachusetts Mutual Fire-Insurance Company, and in 1799 the Boston Insurance Company, were chartered. During the present century the formation of companies has been constant. From many causes, and especially the Great Fire of 1872, a large number of the fire and marine companies have disappeared from the surface. For losses in that fire, \$60,000,000 were paid by the insurance companies doing business in Boston. Without this money to aid in the rebuilding of the city it is difficult to see what would have become of Boston. To the fire-underwriters also is due the formation and support of the Boston Protective Department mentioned in another chapter.

Before 1872 most of the fire-insurance of Boston was carried by the local companies; but the disastrous results of "carrying too many eggs in one basket" showed the necessity of looking, not only to Boston, but to the world, for capital to meet the calamities that can befall the city through extensive conflagrations. A large part of the losses by the Great Fire were paid by the companies of other States and countries then doing business here; and for that reason the preference over local companies was given them by insurers. Since then a large number of companies, some from various parts of Europe and North America, with great capitals, have established agencies in Massachusetts. The Great Fire made another notable change, by making this city the headquarters for New England of many of the largest foreign and American companies; and their trusted and experienced general agents and adjusters settled here, and became active citizens, interested equally with the officers of the local companies in every thing that is advantageous to Boston. Many of these men have joined the ranks of the local agents. The insurance agents generally are men of standing, energy, and intelligence, whose persistency in conducting their business has become proverbial. There are now so many companies and agencies with whom parties seeking large lines of insurance would have to deal, if they tried to effect their own insurance, that the necessity of having some person transact the business of the assured with the companies has brought forward a class of men called "brokers." These seek to control the insurance of firms, and to divide it among the various offices, the latter

paying them commissions. Their duty to the assured is to see that the policies intended to cover the same property are concurrent and correctly worded, and that the insurance is effected in reliable companies at proper rates. Many agents also act as brokers, and take care of the full line of insurance carried by their patrons, placing in other agencies whatever they cannot place in their own. In the "Boston Directory" for 1881 is a list of 267 "insurance agents," many of whom do partly or exclusively a brokerage business.

The Boston companies, whose policies are now sought for all over the country, have scattered their business; and what they lose in amount by the competition on local business they more than regain by their own competition elsewhere. The wisdom of this policy must be plain; for now, in case of large fires, with agencies scattered over the country, the companies, although they should lose their whole assets, could, possibly, pay their losses as fast as adjusted, by means of the premiums coming in from other parts.

The Boston Fire-Underwriters' Union was formed as the result of a combination of the Board of Fire-Insurance Companies and the Board of Insurance Agents that had previously existed. Its original purpose was to establish and enforce uniform rates of premium; but after the Great Fire of 1872 it influenced the introduction of many fire-defences, by means of which both the old and the new sections of the city are made more secure against fire. At present its chief work is to gather and circulate facts of all kinds interesting to fire-underwriters. Its membership includes almost all agents and local companies. The president is George F. Osborne, and the secretary Osborne Howes, jun. The office is at 35 Congress Street.

The American Insurance Company and the Mercantile Marine Insurance Company were the only two Boston joint-stock fire-and-marine companies that at the time of the Great Fire, in 1872, not only paid their losses in full, but also kept their capital intact and held a surplus besides. The American was incorporated in 1818. The main causes of escaping the general calamity were its careful selection of risks, and its large reserve funds, which, with its capital, amounted in 1872 to over \$900,000. Notwithstanding the accumulation of a reserve, the American never failed, up to that time, to pay its semi-annual dividends, which have reached 30% a year. Since the Great Fire, which cost the American nearly \$500,000, the company, in pursuance of its admirable policy of accumulating a large reserve fund for the protection of the policy-holders, passed its dividends for a few years; but they have since been resumed, and now always reach 10% a year,—the largest percentage allowed by law. The assets of the company May 31, 1881, were \$586,300; the capital, \$300,000; the surplus, \$156,100; and the liabilities, \$130,200. The par value of the stock is \$100; and the market value, based on the last sales, is \$141. The American is the only Boston fire-insurance

company owning, exclusively, its own office-building. Its first president was Francis J. Oliver, who held the office 18 years. His successor for 28 years was J. Ingersoll Bowditch, the son of Nathaniel Bowditch, whom he aided in making the calculations of the famous Navigator's Tables. The third president, Charles Eliot Guild, was in office 9 years. He is the brother-in-law of President Eliot of Harvard University, and is to-day the general agent of the Liverpool and London and Globe Insurance Company of England. The fourth and present president is Francis Peabody, who has held the office since 1873. The directors are: Francis Peabody, J. I. Bowditch, William Perkins, James S. Amory, William B. Bacon, George B. Chase, George Z. Silsbee, Charles J. Morrill, John F. Anderson, J. Murray Forbes, R. D. Rogers, George A. Gardner, W. M. Whitney. The secretary, elected in 1872, is Joseph W. Field. The office of the American Insurance Company is at No. 54 State Street.

The Mercantile Marine Insurance Company has already been mentioned in the sketch of the American Insurance Company as one of the only two Boston joint-stock fire-and-marine companies, that, after paying in full their losses by the Great Fire of 1872, were left with a surplus over their cash capitals. The Mercantile Marine for over half a century has ranked among the foremost marine insurance companies, of New England. It confined its business to marine risks until 1871, when it began to take fire risks. The company was chartered in 1823, and has always been successful. Its cash dividends have averaged over 10% a year. Moreover, in 1876, out of its large surplus it made a stock-dividend of \$100,000 by which its capital stock was increased to \$400,000. Its assets are over \$750,000; its surplus over \$225,000; and its liabilities about \$100,000. The Mercantile Marine is known as one of the most conservative companies. Its fire-insurance is confined chiefly to the best class of risks, and is scattered throughout the United States by means of agents in the principal cities. Since 1824 there have been only four presidents: Joseph Baker, 12 years, 1824-36; Nathaniel Meriam, 27 years, 1836-63; Stephen H. Bullard, 10 years, 1863-73; and George R. Rogers, the present incumbent. Mr. Rogers was connected with the company 16 years, — 7 years as secretary, — prior to his election as president July, 1873. B. F. Field, jun., has been secretary since 1873. The directors have always included many of the most respected business-men of Boston. Edward Wigglesworth, a descendant of the famous person of that name, was a director for 40 years. George R. Minot, of Minot, Hooper, & Co., has been a director for the past 40 years. The company's office is at 58 State Street, the same place where it has been for 57 years. The old Custom-House stood on this site; and when it was torn down, the Mercantile Marine Insurance Company became possessors of the two carved statues of "Hope" and "Justice" which stand in the office.

John C. Paige is the leading fire-insurance agent in Boston,—doing the largest business, and representing the greatest amount of capital. Moreover, his offices, which were wholly remodelled and newly furnished in October, 1880, at 20 Kilby Street, are unsurpassed for their elegance, convenience, and arrangement. Ten years ago Mr. Paige was recognized by the profession throughout this country as a skilful adjuster of fire losses, and as an experienced general agent. Duties incident to the Great Fire of 1872 brought him to this city, where he subsequently decided to establish a local insurance-

agency in connection with his general agency business; and to-day by reason of his great ability, varied experience, extreme popularity, and indomitable energy, he has placed himself in the foremost rank of the underwriters in the United States. The companies he represents are the "Imperial Fire of London, Eng.," "Northern Assurance of London,

John C. Paige, 20 Kilby Street.

Eng.," "Orient of Hartford, Conn.," "Hoffman Fire of New York," "Tradesmen's Fire of New York," "Metropole of Paris, France," and the "Réassurances Générales of Paris, France." The gross assets of these companies exceed fifty million dollars. This agency's business extends throughout the United States, for Mr. Paige is the American general agent for the Metropole and Réassurances Générales companies. In the Boston office are upwards of forty male and female employes, all arranged and equipped so as to do the greatest amount of work in the shortest time and with the least confusion. John C. Paige personally is one of those genial, whole-souled men, with whom it is always a pleasure to do business. "Nothing mean about him," never was more fitly applied to any man; and

this characteristic is evidenced by his every action in public and private life. His name is already more favorably and widely known to the Boston people than is that of any other insurance-agent.

The Boston Marine Insurance Company, incorporated in 1873, is the largest marine insurance company of any kind in New England, and the largest purely marine insurance company on the stock plan in the United States. It has a greater surplus over all liabilities than has any fire or marine insurance company in Massachusetts. Its assets exceed \$2,000,000; while its liabilities are only about \$600,000, of which about \$500,000 are for premiums (at 100 per cent) on risks not yet terminated. Its capital is \$1,000,000, full paid. Its usual dividends are ten per cent a year, and the market-value of its stock is fifty per cent above its par value. The net earnings of the company have averaged, since the commencement of its business, \$100,000 a year, less than one-half of which has been divided among its stockholders, the balance being placed to surplus account. The business of the company is exclusively marine and inland insurance on hulls and cargoes. The offices in Boston are on the first floor of the First National Bank Building, No. 17 State Street, corner of Devonshire; and the offices in New York are at No. 43 Wall Street. The president of the company is Ransom B. Fuller, who was its chief organizer, and who has been its only president. The secretary is Thomas H. Lord, who has held the same position since 1876.

The Shoe and Leather Insurance Company, by increasing its cash capital in 1881 to \$600,000, became the largest joint-stock fire and marine insurance company of Boston. The present organization dates to 1872; the former Shoe and Leather Insurance Company having, like almost every similar local corporation, succumbed in the Great Fire of 1872. Since its re-organization it has had a progressively successful career. It has extended its field of operations, enlarged its business, and increased its assets. The capital stock is \$600,000, and the gross assets \$1,050,000. From 1872 to 1879 the office was at 52 Devonshire Street; then it was removed to a handsomely fitted-up office in the Tremont Bank Building, No. 16 Congress Street. The president, John C. Abbott, is one of the oldest persons now an officer of any insurance company in the city. He was born in Concord, N.H., Nov. 19, 1810. Up to the year 1829 he was learning the shoe business in Lynn; then he went to St. Louis, and was engaged in the shoe-business until 1848, when he returned to Boston, and, in 1857, was elected to his present position of president of this company, to succeed George Hood. The directors are men of wealth and reputation in the business community: they include D. W. Salisbury, L. B. Harrington, John Cummings, Albert Tirrell, John C. Abbott, Charles O. Foster, R. Stuart Chase, D. K. Phillips, Silas Potter, James Tucker, James C. Bayley, William H. Hill, William W. Melcher, Charles Choate.

The following list includes all Boston fire, marine, and casualty insurance companies :—

Massachusetts Joint-Stock Fire and Marine Companies.					
INCORPORATED.	NAME.	GROSS ASSETS.*	PRESIDENT.†	SECRETARY.†	OFFICE.†

The Financial Institutions.

NATIONAL AND SAVINGS BANKS, BANKERS, SAFE-DEPOSIT AND TRUST COMPANIES.

THE first bank in America was established in Boston. It began a three-years' course in 1686, and loaned money on real and personal estate and imperishable merchandise. The second American bank was opened in this city in 1714. It issued \$400,000 of scrip, called "merchants' notes," which sustained a good credit while the bank passed through its short career. In 1740 "The Land Bank" was organized by 700 or 800 persons, to afford relief at a time of scarcity of specie. The "Specie Bank" was in operation at the same time. They were only the stepping-stones to the solid banks that were founded later.

In 1782 a branch of the Bank of North America, a Philadelphian institution, was incorporated by the Commonwealth of Massachusetts. This institution was a signal success, and after it were modelled many banks organized in the commercial cities of the United States. The first bank firmly established in Boston, and the second in America, was the Massachusetts Bank, chartered in 1784. From that time the history of the financial institutions is somewhat voluminous, and we shall have to pass on to a cursory glance at those of to-day. Boston has 61 national banks, a larger number than any other city in the United States. They have a total cash capital of \$52,300,000, about the same amount as the total capital of the New-York City national banks. Their surplus, Oct. 1, 1881, amounted to \$11,703,936. Thirty banks of the City of Boston have cash capitals of \$1,000,000, or more, each; and the banks of no other city in the world can make a similar showing. The banks of Boston are noted for their conservatism, and also for their large proportion of capital to deposits.

To give a mere outline of the history of the 61 banks, would require too much space for a work of this kind. A complete list of them and their officers will be found on the following pages. Prominent among the great number of banks in Boston noted for their sound financial basis, ranks —

The Merchants National Bank, chartered in 1831 as the Merchants Bank. In July of the same year it went into operation with a capital of \$500,000. In 1833 the Secretary of the United States Treasury selected it as a depository of the public moneys; and in 1841, when the United States Sub-treasury was abolished, this bank was again chosen as depository, and

was at that time the only Boston bank to receive government deposits. In 1835 the bank purchased from the United States Bank the site of its present building on State Street. The ground covers an area of 8,000 square feet, and the property is assessed on \$600,000. The bank has increased its capital successively to \$750,000, \$1,500,000, \$2,000,000, \$2,500,000, \$3,000,000, and \$4,000,000. In 1864 it began business as a national bank with a capital of \$3,000,000, and authority to increase it to \$6,000,000. It has paid regularly semi-annual dividends since it commenced business. It has issued since 1835 no bill of a lower denomination than \$5.00. Its capital of \$3,000,000 is the largest in New England, and is \$1,000,000 larger than that of any other bank in Boston. Its circulation is \$1,800,000, and its surplus upwards of \$1,000,000. Franklin Haven has been president since 1837; a longer term of service than any bank-president in the city. The cashier is George R. Chapman, and the directors are Franklin Haven, Benjamin F. Burgess, William Amory, F. Haven, jun., J. Huntington Wolcott, T. Jefferson Coolidge, and J. F. Anderson.

The National Revere Bank of Boston was organized May 3, 1859, under the general banking law, as the Revere Bank. July 1, 1865, it re-organized under the national banking law, and assumed its present title. At first it occupied a part of the second floor in the granite building owned by the Sears Estate, and situated on the corner of Franklin and Devonshire Streets. The Great Fire of 1872 destroyed the building; but all the bank's books and papers were saved. Temporary quarters were then secured in the Sears Building on Washington Street, corner of Court Street. There the bank continued business until the completion (July 1, 1874) of the beautiful marble building on the site of the bank's former rooms. In this new building—corner of Devonshire and Franklin Streets—the first floor was specially finished for the National Revere Bank, and provided with the most approved fire and burglar proof safes, as well as all conveniences for bank business. The capital originally was \$600,000; but a few months after the bank began business it was increased to \$1,000,000, and subsequently it was fixed at its present amount, \$1,500,000. Samuel H. Walley, the first president, continued in office until his death, Aug. 27, 1877. His successor was Samuel C. Cobb, who held the position until March 30, 1878, when he was succeeded by George S. Bullens. The first cashier, John W. Lefavour, resigned June 6, 1869, by reason of ill-health; and H. Blasdale, who has been connected with the bank from the time of its organization, was elected. The list of directors has always included the names of Boston's most active and most successful business men, and at present the list is as follows: Osmyn Brewster, John Cowdin, George P. Denny, Samuel Parkman Dexter, Richard S. Fay, Joseph Sawyer, James A. Woolson, John C. Potter, Franklin E. Gregory, Gorham Rogers, George S. Bullens, and Charles E. Raymond.

American Bank Note Co. Boston.

HOWARD NATIONAL BANK,

HOWARD BANK BUILDING, 19 CONGRESS STREET.

R. E. DEMMON, PRES'T. S. F. WILKINS, CASH'R.

The **Howard National Bank of Boston** is the successor of the Howard Banking Company, which was incorporated in 1853. With a capital of \$500,000, it began business at 97 State Street. In 1858 the name of the institution was changed to the Howard Bank. Under that style the bank continued until January, 1865, when, having re-organized under the national banking law, it assumed the present title. In March, 1865, the capital was increased to \$750,000; and in October, 1869, there was another increase of \$250,000, making the capital \$1,000,000, at which amount it now stands. In April, 1870, the bank removed to the second floor of the building No. 85 State Street, opposite Merchants' Row. This location becoming not wholly satisfactory, a new one was sought; and in the spring of 1878 two lots of land, having a frontage of 43 feet on Congress Street, and extending through to Congress Square, were secured. Immediately began the erection of the "Howard Bank Building" from plans prepared by Peabody & Stearns. On the morning of Jan. 1, 1879, the day of the resumption of specie payments, the bank moved into its new building. Its banking-rooms occupy the entire first floor, and are easily accessible and very cheerful. The finish, and also the counters and furniture, are all of mahogany, and were specially designed to secure the utmost convenience and safety, as well as complete harmony of effect. The building contains sixteen elegant offices besides the banking-rooms. The Congress-street façade of the building is well shown in the accompanying steel-plate engraving executed by the American Bank Note Co.

Since 1865 (the date of re-organization under the national banking system), the deposits of the bank have increased from less than one million dollars to about three millions at the present time; and its total profits, which at the time of conversion into a national bank amounted to \$75,000, now amount to over \$240,000 (surplus fund, \$138,000; other profits, \$106,000), the bank meanwhile having regularly paid semi-annual dividends amounting to \$1,220,000, an average for each dividend of 3½ per cent. The Howard reports more than five hundred open accounts, and numbers among its depositors many of the strongest and most respectable business houses and corporations in the city, representing nearly all of the prominent branches of trade. It is also favored with a large number of bank and mercantile correspondents, located at various points throughout the United States, whose Eastern business it transacts. The president is R. E. Demmon, and the cashier Samuel F. Wilkins. The directors are A. B. Butterfield, J. W. Candler, R. E. Demmon, Francis Flint, J. M. W. Hall, William Hilton, Aug. P. Martin, N. W. Rice, and T. Albert Taylor.

Charles A. Sweet & Co. is a representative Boston banking-firm, as it is one of the oldest, most highly esteemed, and most successful firms in the city. The senior member, Charles A. Sweet, graduated from the distinguished banking-house of Gilbert & Sons, and opened, in 1851, a bank-

ing-office at 76 State Street. In 1853 he removed his office to 40 State Street, in the old Union Building, where he has ever since remained. During the past thirty years Mr. Sweet and his associates have taken an active part in the financial matters of this country. At the time of the Rebellion they were conspicuously prominent in placing the different government loans throughout New England. • Since then, in addition to heavy transactions in United-States bonds of various issues, they have taken a leading position in the negotiation of State, county, city, town, and railroad

Charles A. Sweet & Co., Union Building.

loans. In handling large investments they have a noteworthy record. Among their transactions within the past five years were the following investments in bonds and stocks alone: \$5,000,000 of New-York and New-England Railroad; \$3,000,000 City of Cincinnati, Ohio; \$2,000,000 Massachu-

setts Central Railroad; \$1,000,000 City of Cleveland; \$1,000,000 Boston and Maine Railroad; \$1,000,000 City of Boston. They were the first to place the Boston loan at 4 per cent, which in itself was the pioneer loan by cities at that rate. They are members of the Stock Exchanges of New York and Boston, and transact all business usual to bankers and brokers. The firm at present consists of Charles A. Sweet, George W. T. Riley, A. Ward Perkins, and Walter H. Sweet.

A complete list of other **Banks** and a partial list of **Bankers** are enumerated on the following pages.

Head, C. D., and T. H. Perkins, 68 Devonshire St.	

The Savings Banks of America had their origin in this city. The first was The Provident Institution for Savings in the Town of Boston, chartered in 1816. To-day it has a larger amount of deposits than any similar institution in this country, except one or two Savings Banks in New York. There are in Boston 16 savings banks, and a list of them is given on the preceding page. They are under the supervision of the commissioners of savings banks, an office created in 1866. Their investments and loans are restricted by law, and all their officers are sworn to the faithful performance of their duties. The commissioners are empowered to examine the banks at any time, and are obliged to do so at least once a year. The "stay law," passed in 1878, limits and restricts the payment of money to depositors, and was framed to provide against a "run" on the savings banks. Under this law the commissioners, whenever they deem it expedient, can grant the bank authority to pay its depositors only such proportion of their deposits, and at such times, as the bank can pay without affecting its solvency or subjecting it to great loss.

Safe-Deposit Vaults. — Boston is now amply provided with safe-deposit vaults; but there was nothing of the kind in the city ten years ago, when the attention of the public was first called to

The Union Safe-Deposit Vaults, which had been constructed by Henry Lee, to afford absolute protection for all kinds of valuables against loss by fire or burglary. The vaults were built in the basement of the Union Building, 40 State Street, and were of such a character, and had around them so many conveniences, that they excited the admiration and approval of the most competent judges. Henry Lee, of the banking-firm of Lee, Higginson, & Co., assumed the management, and George C. Lee was appointed sub-manager, positions that both have held ever since. The enterprise succeeded so well that other safe-deposit vaults have since been started.

The Massachusetts Loan and Trust Company of Boston was granted in 1870 a special charter authorizing the company to make advances on staple merchandise, and to receive, hold, collect, and disburse money, securities, or property in trust or otherwise, from individuals, executors, administrators, guardians, trustees, or by order of court. It is also authorized to act as trustee or agent for any person, firm, corporation, state, or government; and in their behalf to sell or negotiate property of any kind, or to receive or invest money. The company has unsurpassed facilities for furnishing money at low rates of interest to merchants and manufacturers. Loans are made on staple merchandise, secured by bills of lading or by warehouse receipts, upon terms so accommodating, that the owner has the opportunity of disposing of the merchandise as readily as though it were under his own direct control. This company also undertakes to close out the affairs of

estates, or business-houses in bankruptcy or liquidation, in the most expeditious manner, and on very favorable terms. Interest is allowed on all money deposited with the company. During the twelve years since the organization of the Massachusetts Loan and Trust Company, it has not only afforded great aid to business-men by lending them money on favorable terms, but it has also provided a profitable and safe means of investment to individuals, corporations, executors, guardians, trustees, or assignees of bankrupt estates, by paying interest on deposits made either on fixed time or on demand. The corporation has a paid-up cash capital of \$500,000, with liberty of increasing to \$1,000,000. The president is George Woods Rice, and the treasurer is Stephen M. Crosby. The office occupies the first floor of the stone building No. 18 Post-office Square.

The Boston Clearing-House Association, organized in 1856, is the second oldest organization of its kind in this country. The banks in former times were compelled to send messengers from one bank to another to collect and pay drafts and checks; and in so doing they were liable to incur great losses by the waylaying of messengers, and were put to considerable needless expense and trouble. Nowadays 51 banks send their "messengers" and "settling-clerks" at ten o'clock every morning to the third floor of the New-England National Bank building, 65 State Street, and there in a few minutes, without danger of loss, transact the whole business that would otherwise require several hours' time and considerable risk. The "losing banks," as those are called which bring in a smaller amount of checks on other banks than other banks bring in on them, are required to pay before 12.15 o'clock the balances due by them; and the "gaining banks" come in after that time for the balances due them. There are also 23 banks located in the vicinity of Boston that make their clearances through members of the association. The great work that is accomplished in a short time can be imagined when it is understood that about \$12,000,000 change hands every day. The president is James H. Beal, and the manager is N. G. Snelling.

The Boston Stock Exchange is situated on Exchange Street, just off from State Street. It is a hall, with regular rows of desks from the president's platform and table. It is connected by telephone with the offices of members; and in the ante-room is a branch office of the Western Union Telegraph Company. The rooms have recently been enlarged. There are about 150 members. The membership-fee was formerly \$2,000, but it is now \$5,000. The transactions, which are those usual to stock boards, have within the past 18 months considerably increased in volume. The Board meets daily at 10.30 A.M. and at 2 P.M. Visitors can gain admission by application to the president M. R. Ballou, to the secretary W. C. Fisk, or to any member. The membership is full, and seats are in demand.

The Tongue of the City.

BOOK AND PERIODICAL PUBLICATIONS; NEWSPAPERS OF THE PAST AND PRESENT.

BOSTON'S literary prominence has long been recognized; and its publications, book and periodical, have been from the earliest, and still continue to be, among the foremost in the country. The history of its book-trade, from the time of Thomas Fleet, the earliest of its printers and publishers, — first of "Pudding Lane," now Devonshire Street, and long of Cornhill under the imposing sign of the "Heart and Crown," — to the present day, would fill a volume, and would be almost as interesting to the bibliophile and antiquary as the history of the book-trade of London or Paris. The pre-eminence that Boston has attained in the publishing and book-selling business is but the natural result of having within and around her boundaries the men whose names stand foremost among the *literati* of the New World, as well as having some of the largest libraries and greatest educational institutions. The success of the trade is maintained by the great inducements offered buyers of books; for it is undoubtedly a fact that the dealers in Boston do sell books from 10 to 20 per cent lower than the same books can be bought elsewhere. Moreover, while the stores are not, as a rule, costly in their furnishings, possibly owing to the close margins on which the business is conducted, they are capacious, and contain myriads of books. Probably nowhere in this country can like numbers and rarities be found. Those engaged in the business are generally men whose lives have been given to the study of the trade, and of the tastes of the most cultured people. Almost all of them are thoroughly trustworthy and extremely courteous in their dealings. In publishing and book-selling, several million dollars have been invested, and a large number of persons employed. For years the book-trade centred in Cornhill; but it is now scattered, the leading houses being on Washington, Park, Tremont, Bromfield, and Franklin Streets. The oldest existing book-house is that of Little, Brown, & Co., the lineal successors of a book-shop kept in 1784 by E. Battelle in the Marlborough Street of that time; and the oldest book-store is in the quaint building erected in 1712 on the corner of Washington and School Streets, an ancient landmark, long known as "the Old Corner Book-Store," as it has been a book-stand since 1828, before which time it was used as an apothecary-shop, and before that as a dwelling-house, for which it was originally erected by Thomas Crease.

Quite as interesting as the history and growth of the book-trade of the city is that of its periodical literature, and particularly its newspapers. It was in Boston that the first newspapers in the New World were published. The first venture, "Publick Occurrences, Both Forreign and Domestick," dated Sept. 25, 1690, came to a sudden end after a single issue; the authorities having promptly suppressed it, the General Court denouncing it as "containing reflections of a very high nature." The next attempt, "The Boston News-Letter," fortunately "published by authority," succeeded better, and was the first newspaper actually established. Its first issue was April 24, 1704. It was founded by John Campbell, postmaster, and printed by Bartholomew Green, whose name, says Delano A. Goddard in his interesting chapter on "The Press of the Provincial Period," in the Memorial History of Boston, "is associated with many of the best books printed in America for more than a third of a century." The printing-office was in Newbury (now Washington) Street, near the corner of Avon Street; and the paper was sold "by Nicholas Boone at his shop near the old Meeting-house." It was a small folio sheet, issued weekly. Fifteen years after, a second newspaper was established, called "The Boston Gazette," the first number bearing date Dec. 14-21, 1719; and the following day, Dec. 22, the first American newspaper established outside of Boston, "The American Weekly Mercury," appeared in Philadelphia. "The Boston Gazette" was published by William Brooker, who succeeded Campbell as postmaster, and printed by James Franklin, Benjamin Franklin's elder brother. Brooker and Franklin continued publisher and printer of the paper only a few weeks; and in 1721 Franklin issued the third paper, "The New-England Courant," from his printing-office in Queen (now Court) Street. The first number of this paper was issued on Aug. 17, 1721. It led a short and stormy life. Increase Mather denounced it as "a cursed libel." Franklin was twice arraigned for contempt, and once imprisoned four weeks in jail; and for a while his name was withdrawn, and the paper appeared with the imprint of Benjamin Franklin, then an apprentice with his brother, and not more than sixteen years of age. The paper ceased to exist in 1727. The use of the younger brother's name was not to his advantage; and, soon after the change was made, he left Boston for Philadelphia. Mr. Goddard says of "The Courant," that "it was not wanting in ability; and, as a protest against prevailing narrowness and bigotry, it might have been of some service. But it was aggravating in temper, unjust to the authorities, misrepresented the clergy, and was on the wrong side of many public questions." The paper is remembered as that in which Benjamin Franklin's first contributions appeared. The fourth newspaper was "The New England Weekly Journal, containing the most remarkable occurrences, foreign and domestick," begun March 20, 1727; the fifth was "The Weekly Rehearsal," begun

in 1731; "The Boston Weekly Post-Boy" followed in 1734, succeeding "The Rehearsal," printed once a week in the evening, however, instead of morning; then came "The Independent Advertiser," begun in the winter of 1748, to which Samuel Adams was one of the regular contributors; next was started, in 1753, "The Boston Gazette and Weekly Advertiser," on the foundation of "The Boston Gazette and Weekly Journal;" and this was in turn succeeded, a little more than two years after, by "The Boston Gazette and Country Journal," which was the organ of the Revolution; while "The Boston Weekly Advertiser," begun in 1757, loyally sustained the British Government during that struggle, and closed its career with the war. In 1767 "The Boston Chronicle" was started, and that was the first paper to publish oftener than once a week: in its second year it began publishing on Mondays and Thursdays. In 1770 the publication of "The Massachusetts Spy" was begun. It advocated the cause of the patriots with great vigor and boldness, and its office was styled by the royalists "the sedition foundry." The last number printed in Boston was on the 6th of April, 1775. It was then removed to Worcester. "The News-Letter," the first established paper in Boston, lived 72 years, and was the only paper published in the city during the siege by Washington. Other papers of the early days were "The Independent Ledger and American Advertiser," revolutionary in sentiment, and displaying the motto, "All hands with one inflamed and enlightened heart;" "The American Herald," started in 1781; and "The Massachusetts Centinel and the Republican Journal," afterwards changed to "The Columbian," the publication of which was begun in 1790. Of the 49 newspapers published in the colonies from 1748 to 1783, all were weekly or semi-weekly journals. The first daily paper in the country was "The American Daily Advertiser," published in Philadelphia, beginning in 1784; and the first attempt at daily-newspaper publication in Boston was, in 1796, by John O'Ley Burk, one of the "United Irishmen," with a venture called "The Polar Star and Boston Daily Advertiser." This lived six months, and was followed by "The Federal Gazette and Daily Advertiser," which lived but three months. Then the third and successful effort was made in the publication of "The Boston Daily Advertiser and Repertory," begun on the 3d of March, 1813. To trace the growth of the press of Boston from that time to the present in detail would occupy more space than is available. It is sufficient to say that its development has been rapid and abreast of the times. It has been able, diligent, and enterprising; has employed some of the best pens and brightest intellects; and has exerted a wide influence. In the pages following, some of the extant representative Boston newspapers and periodicals are concisely sketched.

There are in Boston at the present day 10 daily papers, 4 semi-weekly, 70 weekly, 7 Sunday papers, 6 fortnightly publications, 93 monthly periodicals, 10 quarterlies, and many annuals.

"The Daily Advertiser" is published in a substantial, ornamented granite edifice on Court Street, on the site of the printing-office in which Franklin learned his trade, nearly opposite the Court House. The editorial and composition rooms occupy the entire fourth and fifth floors of the building; the counting and mail rooms, the entire ground-floor; and the press and stereotyping rooms are in the spacious basement. The counting-room is finely appointed and attractively finished; and the building is well arranged for a newspaper-office, having side lights and entrances from Franklin Avenue, as well as a generous front. "The Advertiser," in its earlier years, acquired the good-will of several journals, among them "The Independent Chronicle," "The Boston Patriot" (established in 1809), "The Columbian Centinel," "The New England Palladium," "The Boston Gazette" (the fourth newspaper in Boston bearing that name), "The Repertory" (first published in 1803 by W. W. Clapp, and united with "The Daily Advertiser" at the outset, its name for a while being part of the title), and "The Boston Weekly Messenger." The first publisher of "The Advertiser" was W. W. Clapp; and the first editor, Horatio Bigelow. In April, 1814, Nathan Hale, then the editor and proprietor of "The Messenger," purchased

"The Boston Advertiser," Court Street.

"The Advertiser" property from Messrs. Clapp and Bigelow; Mr. Clapp continuing for a while the publisher. For more than thirty years Mr. Hale conducted the paper with credit to himself and the community. It was under his administration that it attained the local title of "the respectable daily." Mr. Hale was the first to introduce steam power-presses in New England; and it is claimed that his was the first journal which systematically introduced the editorial discussion of political topics. He died in 1863; and his eldest son, Charles Hale, succeeded him as editor, having for some years previously ably assisted his father in the conduct of the journal, as had also

his brothers, Edward Everett Hale, the well-known clergyman and writer of the present day, and Nathan Hale, jun. Upon his appointment as consul-general to Alexandria in 1864, Charles Hale disposed of the property to Dunbar, Waters, & Co.; and Charles F. Dunbar of the firm, who had for some time been the assistant editor of the paper, succeeded Mr. Hale in its editorial conduct. Mr. Dunbar continued in charge until 1869, when he was appointed professor of political economy in Harvard College. In that year, also, the property was sold to the present proprietors: and it has since been conducted editorially by Delano A. Goddard; Edwin F. Waters, one of the original purchasers of the property from Charles Hale, continuing as publisher. Until the summer of 1881 the paper was a large folio; but on the 4th of July it appeared in the quarto form, printed on an improved Bullock press with a patent cutter and folder attachment. "The Advertiser" enjoys a substantial circulation among the best classes of readers, and a valuable advertising patronage. It has long been recognized as a leading commercial and business journal, and it now has the reputation of being a thorough and prompt newspaper in every department. It employs a large force of editors, writers, correspondents, and reporters, and is conducted with much skill and painstaking. In politics it is Republican.

"**The Boston Evening Transcript**" is a favorite afternoon paper, particularly in refined Boston and suburban homes. It is a literary paper, and noteworthy for its good variety of interesting miscellaneous reading-matter published along with the current news. Founded in 1830, it is the oldest evening paper in New England. It has been a substantial success from the start. It was established by Dutton & Wentworth, the State Printers at the time. The next proprietors were Henry W. Dutton & Son; and on the death of both the senior and junior Dutton its publication was assumed by trustees in the interest of their heirs. In 1879 the Boston Transcript Company was incorporated, the stock being held wholly by the Dutton heirs. The first editor was Lynde M. Walter. On his death, in 1842, he was succeeded by his sister, Miss Cornelia M. Walter. Subsequently Epes Sargent was editor of the paper for a number of years, and after him Daniel M. Haskell, whose genial and skilful conduct of the paper continued until his death in 1874. He was succeeded by William A. Hovey, and he in 1881 by Edward H. Clement, the present editor. The quarters of "The Transcript" are in its own large and handsome building, on the corner of Washington and Milk Streets, erected to replace the office burned in the Great Fire of 1872. It is one of the most commodious and elegant in the city. "The Transcript" is a quarto of the average size, handsomely printed from fast presses; and it occupies a field practically without a rival. It has a well-equipped corps of editors, reporters, and occasional writers; and it is enterprising in gathering the best of the local and general news. The quiet and dignified

tone of the editorial page, and the absence in the paper of any thing which

"The Boston Transcript," Washington Street.

appeals to the popular craving for sensationalism, go far toward winning for "The Transcript" the esteem of its readers, and the success it enjoys. In politics "The Transcript" is Independent Republican. Beside the daily edition, an attractive and readable weekly edition—its contents selected with care and good judgment from the daily editions—is published. S. P. Mandell is president of the Transcript Company; and William Durant, who has been the business manager since the death of Mr. Dutton, is treasurer.

"The Boston Post" is the leading Democratic commercial morning newspaper of Boston, and has a large circulation among business-men and Democratic families. It is published by the Post Publishing Company at No. 17 Milk Street, and sells for 4 cents a copy. Its new iron building stands on the spot where Benjamin Franklin was born; and a bust of the famous printer ornaments the front. The business-office is on the ground-floor. The editorial rooms, which are reached after a breathless climb of an iron staircase, consist of private rooms for the editor and his assistants, and neat rooms for the night-editor, city-editor, and the reporters. "The Post's" history dates back to 1831. It was at first a small sheet of 16 col-

umns, from which it has been enlarged at various times until it now contains 36 long columns. Col. Charles G. Greene was the founder and first editor. He did much to make a reputation for the paper by his straightforward, vigorous, yet courteous style of treating public questions. It is not too much to say, that, under his editorship, it became the leading Democratic daily in the country, as well as a leading representative commercial paper of Boston. He gave it, also, a reputation for exceedingly good humor and brightness, which it has never lost. Nathaniel G. Greene aided his father as editor, and practically conducted the paper for several years. In the winter of 1875 the property was sold to Rev. E. D. Winslow, who in January following proved to be a forger, and whose exposure after his flight was a great local sensation (see first chapter). He had so manipulated the certificates of the company's stock that it was difficult to decide who were the rightful owners. The matter was finally settled by the Supreme Court, and the property was disposed of to a new corporation. For a while F. E. Goodrich, a leading editor, conducted the paper as editor-in-chief. He was succeeded by George F. Emery, the principal proprietor. During the year 1881 the corporation has been re-organized through sales of stock; Alonzo P. Moore, a prominent Boston business-man, becoming the largest stockholder, as well as treasurer and business-manager; Mr. Emery retiring, and Robert G. Fitch succeeding him as the editor-in-chief. The paper has always shown evidence of wise and careful management. The "All Sorts" column of fresh and sprightly paragraphs, an original and famous feature of "The Post," continues to be well sustained, and its various departments are carefully edited by a corps of well-trained and able journalists. "Mrs. Partington" (B. P. Shillaber) made her reputation for genial humor in the columns of "The Post." Improvements are often made. In 1881, for instance, the "make-up" was materially improved, and many new features were introduced; the financial news department was strengthened, including telegraphic Monday reports from the clearing-houses throughout this country; the list of correspondents over the world was increased; the hotel arrivals became a feature; and more attention was shown to suburban news, personal gossip, and literary information.

"The Boston Post," Milk Street.

"The Boston Journal," established in 1833, has held for nearly fifty years a leading position in New-England journalism; increasing with the growth of the city, and enjoying great confidence and liberal support. It is at once both a business-man's and family newspaper. Originally a Whig newspaper, it affiliated with the Republican party in the earliest days of its existence. Few newspapers have been more loyal to the principles of the party, though its aim has been to make its discussion of men and measures independent and fair. It publishes morning and evening editions, and also semi-weekly and weekly editions. It gives in these several publications a vast amount of news, collected by its Washington, New-York, London, and Paris correspondents. It makes a specialty of New-England news; and its representatives in all the news centres of New England are daily pouring into its columns the earliest information. Its comments upon passing events are timely. The news is carefully prepared, great care being taken to avoid prolixity. The result of the national election in 1880, for instance, which involved the expenditure of a large amount, was printed in a single column; the tedious and uninteresting details having been studiously tabulated, so that the result in each State was seen at a glance. The "News of the Morning" and "Table of Contents" enable the hurried man of business to ascertain quickly all the important news of the day. The "City Article" contains a full sketch of the condition of the markets, printed in a form which is attractive and instructive. Its special literary features are well known, and it constantly adds new ones. No labor seems to be spared to make it interesting, newsy, and profitable to all classes of readers. Its varied circulation is peculiar, and almost exceptional, tending to give it that popularity as an advertising medium which it has so long enjoyed among shrewd businessmen of the country. Its scale of prices, circulation considered (enjoying as it does the largest circulation in New England of any paper of its size and price), is low; and the fact that it rigorously maintains one price without discount gives to all patrons a knowledge that there is no favoritism in its business management. In its mechanical appointments "The Journal" is not surpassed by any newspaper in the country. It has recently introduced two Hoe perfecting presses, capable of printing 60,000 papers per hour, and now stereotypes its forms. A distinguished New-England statesman once said: "The 'Boston Journal' contains more reading that I am interested in, and less that I care nothing about, than any paper published." The original publishers of "The Journal" were Ford & Damrell. In 1841 it passed into the hands of Sleeper, Dix, & Rogers. John S. Sleeper was the first editor. He was succeeded by James A. Dix. For years the late Stephen N. Stockwell was connected with its editorial management. The late Col. Charles O. Rogers, of Sleeper, Dix, & Rogers, the early proprietors, and later its chief owner, gave a start to the paper on

its career of prosperity, and made a fortune in its conduct. It is now in charge of Col. William W. Clapp, who for seventeen years was editor of "The Saturday Evening Gazette." He has had nearly forty years' experience in Boston journalism, sixteen years of which have been passed in the "Journal" office; and he has done much in the way of improving and strengthening it. His corps of assistants in each department are men of ability and experience. The office is efficiently organized, and a vast amount of labor is performed with very little friction. The business and editorial quarters are modern in their appointments, and well arranged for the convenient transaction of business. On the evening of March 21, 1880, the interior of the editorial and composition rooms was badly damaged by fire, and other portions seriously injured; the whole causing a loss of \$40,000 and much inconvenience. The establishment quickly recovered, and the interior was promptly rebuilt and re-arranged after approved modern patterns. "The Journal" has occupied its present building, No. 264 Washington Street, since September, 1860.

"**The Boston Evening Traveller**," now published at No. 31 State Street by Roland Worthington & Co., was the first two-cent evening paper established in Boston. It was founded in 1845, succeeding "The American Traveller" (weekly) and "The Boston Traveller" (semi-weekly), the former's headline exhibiting a cut of the four-in-hand stage, dashing along the dusty road. Its present chief proprietor, Roland Worthington, associated himself with its originators about two months after its first issue appeared, and has been its directing mind from that time to the present. Under his management it early achieved, and has steadily maintained, a high reputation as a prompt and enterprising collector of news. To it belongs the credit of being among the leaders in the movement to sell papers on the street by newsboys, and also of having introduced the news-bulletin in Boston, which is now an essential feature of every newspaper-office. It was first published from the Old State House Building, and moved to its present headquarters about thirty years since. In the same office Benjamin Russell, one of the most aggressive of Boston editors, began, about 100 years ago, the publication of "The Columbian Centinel," afterwards merged into "The Daily Advertiser." In 1857 the "Atlas," "Chronicle," and "Evening Telegraph" were merged into "The Traveller." It is now a large folio with 36 long columns, and is issued at three cents. "The Boston Traveller" is the semi-weekly edition, and "The American Traveller" is the weekly edition, both having a large family circulation. In politics it is aggressively Republican, and sustains its opinions with great vigor. It has a large and talented corps of editorial writers, and its articles are quoted throughout the country. It pays especial attention to literary, educational, and social topics, and hence obtains admission to the best family circles of New England. Its "Review

of the Week," published every Saturday, has been a favorite feature for two decades, and still retains its popularity. It is written by the veteran historian and *littérateur*, Charles C. Hazewell, who was one of the earliest and strongest contributors to "The Atlantic," and whose accuracy on historical matters makes this Review a standard authority. In the matter of telegraphic news, its Associated Press despatches are liberally supplemented by special despatches from Washington and all the chief centres of intelligence. It makes full reports of religious, scientific, and philosophical gatherings, and notable lectures find space in its columns. Henry Ward Beecher's sermons have for many years regularly appeared in "The Traveller" of Saturday, with which a large supplement, filled with short stories, good poetry, and miscellaneous reading, for the fireside, is regularly sent out. An exposition of the International Sunday-school Lesson for the following day is also a standing feature of the Saturday number. Its reviews of new books, and its dramatic, musical, and art criticisms, have long enjoyed a high reputation. The managers of "The Traveller" have always made it their boast, that nothing of an indelicate or even doubtful character could find its way into the columns of their paper. In the chapter on "The Public Buildings," is a good illustration of the "Traveller" Building and its interesting locality, including the Brazier Building, the First National Bank Building, the Old State House, and the Sears Building. It was almost in front of the "Traveller" Building that the Boston Massacre took place; and not far from it stood the old town-pump. "The Traveller" is now the only paper published on State Street,—the "Wall Street" of Boston,—although not many years ago several of the leading local papers at the time were published there. In keeping with its location in the heart of commercial Boston, are its full and well-edited columns of commercial news, mining, railroad, and market reports, latest stock quotations, and daily financial review. On Tuesdays and Fridays "The Traveller" publishes, by contract with the City of Boston, the official verbatim report of the proceedings of the two branches of the City Council, which makes it the newspaper authority on municipal affairs. Within the past few years its circulation has been steadily increasing, and it has manifestly opened a new and prosperous chapter in its very creditable history.

"The Boston Herald" is the great popular newspaper of the city. Its circulation is far in advance of any of its contemporaries, and its business patronage is extensive and profitable. It has for many years enjoyed a large circulation; but its greatest growth in every direction has been under its present management. It is essentially a *newspaper*, and its enterprise has long been recognized as a conspicuous feature of its conduct. The first number of "The Herald" was issued in 1846 as an evening publication only, "neutral in politics." It was a small sheet, four pages of five columns each, and was sold for a penny. In 1847 it acquired "The American

Heliotype Print.

THE BOSTON HERALD BUILDING, WASHINGTON STREET.

R. M. Pulsifer & Co., Proprietors.

Eagle," and in 1847 "The Daily Times," both of which were merged into it, and their names dropped out. The success of the venture was assured from the start. With the second year the form of the paper was enlarged, and it appeared with morning, evening, and weekly editions. The weekly edition was discontinued in 1851, and a Sunday-morning edition was started a few years after. In 1854 the columns were again enlarged; and, fifteen years after that, the paper was changed to its present size of eight columns to a page, and four pages to the sheet. Of late years it frequently brings out double sheets; and the Sunday issue, a large quarto, is generally a "triple sheet." The first editor was William O. Eaton, a young man of twenty-two when he first took charge. Edwin C. Bailey, once postmaster of Boston, owned and managed the paper for several years, and he was succeeded by the present managers, R. M. Pulsifer & Co., who bought the establishment in 1869. Since then there have been two withdrawals from the firm; but the principals remained. All three of the present owners "grew up" on "The Herald,"—Mr. Pulsifer, the publisher, from a modest clerkship in the business department; E. B. Haskell, the editor-in-chief, and C. H. Andrews, the news-manager, from the positions of general reporters in the editorial department. As long ago as 1854 "The Herald" was recognized as having the largest circulation of the daily papers of the city by receiving the award of the Post-office letter-list advertising. For seven consecutive years "The Herald" had claimed this as a right by virtue of the largest circulation. Its average daily circulation in July, 1881, was 133,000, and that of the Sunday edition 117,310. A good idea of the kind of news demanded by the people can be gleaned from the following memoranda of the number of copies sold when "The Herald" contained the news of the events cited:—

YEAR.	EVENTS.	NO. OF COPIES.	YEAR.	EVENTS.	NO. OF COPIES.
1863.	The draft riots and Lee's march into Pennsylvania	74,000	1871.	The election returns	100,320

"The Herald" was long established at No. 103 (now numbered 241) Washington Street; the editorial, press, and mailing rooms being in the rear on Williams Court. In February, 1878, it removed to its present building, especially erected for it at No. 255 Washington Street. This building is one of the finest newspaper-offices in the world. Its outward appearance is most attractive, and its internal arrangements are most complete. It is finished with all the modern conveniences, and was built from the most carefully prepared plans, after the examination of other modern newspaper-offices. It is practically two buildings. The main building on Washington Street has a frontage of 31 feet nine inches, and a length of 179 feet. The L leading into Williams Court has a frontage of 24½ feet, and a length of 40 feet. The total ground-surface is about 6,200 square feet. The Washington-street front, in the French Renaissance style, makes a striking contrast with its dingy surroundings. The building has six stories and a high basement. The entire finish and furnishing of the building are elaborate, and in excellent taste. There are four Bullock presses in the basement, capable of printing 86,000 papers an hour. In politics "The Herald" is independent.

"The Boston Globe" is a Democratic morning and evening newspaper, issuing from six to eight editions daily. It was started in March, 1872, as an eight-page paper, independent in politics, by Maturin M. Ballou. Mr. Ballou retired from ownership and its editorial charge the following year, and was succeeded by a new organization which endeavored to make it a complete newspaper up to the metropolitan standard, and also independent in politics. It was so continued, with varying success, until the spring of 1878, when the radical change to the present politics, shape, and price was made. Its morning and evening editions are now sold at two cents a copy,

and it has a Sunday edition, a large quarto, selling at 5 cents a copy. It also publishes a weekly edition. The several editions enjoy a large circulation. Like the other leading newspapers of the country, it has had a very large circulation on days when great events have excited the public mind. On the day following the election in November, 1878, 82,400 "Daily Globes" were sold; in November, 1879, 66,070; in March, 1880, on the last day of the first New-York walking-match, 56,700; Sept. 18, 1880 (250th anniversary of Boston), 54,880; and on Nov. 3, 1880 (day after Presidential election), 73,330. On Jan. 1, 1881 (when the "1981 Globe" was issued) 80,260 copies were sold on that day. Subsequently the demand increased all over the country, and several hundred thousand more copies were printed. During the summer of 1881 a Baltimore firm, who bought the copyright of this edition, printed the "1981 Globe" in several languages, and began the distribution of millions of copies all over the civilized world. During the sickness of President Garfield "The Globe" greatly added to its reputation by its patriotic course. During the campaign of 1880 it supported Gen. Hancock, and severely criticised Gen. Garfield. After the election it recognized him as the President of the whole people; and when he was struck down by the bullet of the assassin as the head of the nation, "The Globe" denounced the act in vigorous terms, and stood on high patriotic ground, where every man and newspaper in the country, with hardly an exception, were firmly united, and prepared for any emergency, or any crisis which might affect the life of the Republic. On the night of the President's death "The Globe" was one of the few newspapers which issued a midnight extra giving the news. From one to three o'clock A.M., probably for the first time in their history, the people of Boston were awakened by newsboys to get out of their beds to buy a newspaper. The sales on that day ran up to 117,800 copies. On the day following the funeral of President Garfield, "The Globe" for the first time in the history of journalism, utilized the poets on a broad scale, devoting the whole first page to tributes to the President from Oliver Wendell Holmes, Joaquin Miller, John Boyle O'Reilly, and other well-known poets. It was a decided hit; 104,890 copies being sold on the day of publication, and many thousands were sold daily for several days afterward. The "Globe" Building, Nos. 236 and 238 Washington Street, is large and unpretentious, extending through to Devonshire Street. It was formerly occupied by "The Boston Transcript." "The Globe" is well fitted out in each department, stereotypes its forms, and with its new press has facilities for turning out 50,000 papers per hour. It is especially enterprising in its efforts to obtain the latest news,—the National Associated Press furnishing the groundwork of its despatches; and it has special correspondents throughout New England, and at leading centres in the whole country. In June, 1873, when Mr. Ballou sold out his interest and retired, the stock-

holders unanimously placed the establishment in charge of Col. Charles H. Taylor, who has been the manager since that time. The managing editor is Benjamin P. Palmer.

"**The Daily Evening Star**" is a one-cent newspaper, started Oct. 18, 1880, by Robert C. McCartney and associates, under the firm name of "The Star Newspaper Co." The first office was a poorly furnished room at 7 Williams Court, where it remained until August, 1881. At that time a radical change was made in the ownership and management. A new company was formed, with Col. Charles H. Lewis, L.L.D., the president of Lewis College of Northfield, Vt., as president; Hon. W. D. Lewis, treasurer; Hon. William A. Simmons, ex-collector of the port of Boston, manager; and Hon. Charles J. Brooks, ex-State senator, editor. New and well-furnished offices were taken at No. 332 Washington Street, by the side of the "Transcript" Building; and, although the original press-room was retained, it was quite differently equipped from what it was at the beginning, when an ordinary press having a capacity of 1,000 papers an hour was the sole equipment. The press used to-day is of the Bullock pattern, the forms are stereotyped, and the capacity is 15,000 papers an hour. According to "The Star's" claim, its circulation was on Aug. 1 about 6,000 copies, and on Oct. 1 over 25,000; and contracts have been made with the Bullock Company for presses having capacity of 30,000 or 35,000 papers an hour, in anticipation of a much greater circulation. Under the present management the paper seems to be on a progressive foundation.

The Sunday Papers—besides the Sunday editions of "The Boston Herald" and "Boston Globe"—are "The Saturday Evening Gazette," "The Boston Courier," "The Boston Times," "The Sunday Budget," "The Boston Sunday Mail," and "The Express." "The Gazette" was established in 1813 by William W. Clapp, the first publisher of "The Daily Advertiser;" and he was succeeded by his son W. W. Clapp, now of "The Boston Journal." The present editor and proprietor is Henry G. Parker. The paper is a large folio, and one of its chief features are its "Out and About" columns of local society and fashion news and gossip. "The Courier" was formerly "The Daily Courier," and as such had a conspicuous career as one of the chief Whig papers of Boston. It was established in March, 1824, and was edited until 1848 by Joseph T. Buckingham, in his day one of the leading editors of New England, and who wrote, among other things, his "Reminiscences," which is a valuable contribution to the history of journalism. He was succeeded as editor by Samuel Kettell, and Mr. Kettell by George Lunt. Its publication as a daily ceased during the war of the Rebellion. It is now a literary paper, conservative in politics, and of excellent tone. Its publisher is Joseph F. Travers, and its editor Arlo Bates. "The Times" is edited by Frank T. Robinson. "The

Budget" was started in 1878 by M. M. Ballou, who established "The Daily Globe." In the present year it was purchased by William A. Hovey, the former editor of "The Transcript," and associates; and Mr. Hovey is its editor, and George B. James its publisher.

Agricultural Papers.—The oldest agricultural paper published in Boston is "The New-England Farmer," the publication of which was begun in 1821. It still continues, a vigorous and able sheet. Its present publishers are Darling & Keith, No. 34 Merchants Row. A. W. Cheever and R. P. Eaton are the editors. "The Massachusetts Ploughman and New-England Journal of Agriculture" was established in 1841. George Noyes is its editor and publisher, at No. 45 Milk Street. Another successful agricultural paper, which has reached a good old age, is "The American Cultivator," edited and published by George B. James, at 259 Washington Street. It was established in 1839.

Juvenile Magazines published in Boston enjoy great popularity, and have a wide circulation. The oldest of this class of publications is "The Youth's Companion." This was established in 1828, and was the first of its kind in the country. It is published by Perry Mason & Co., at 41 Temple Place, and is edited by D. S. Ford. Its circulation is very large, and it has long enjoyed a substantial prosperity. It employs some of the ablest pens, and its aim is to elevate the taste of the thousands of young people who read and enjoy it. It is liberally illustrated, and published weekly. "The Wide Awake," a popular illustrated monthly, is edited by Ella Farman, and published by D. Lothrop & Co., 32 Franklin Street, who also publish "Babyland," "The Pansy," and "The Little Folks' Reader," all monthly. "The Wide Awake" is handsome, well printed, and well edited. Some of its illustrations are of a superior order, and its youthful patrons are very fond of it. The other publications are for younger children. "Our Little Ones" is a new young folks' magazine, edited by William T. Adams, so widely known as "Oliver Optic." It is published by the Russell Publishing Company, at No. 149A Tremont Street. It is one of the finest of all American publications. There are other juveniles of a denominational character published by the various houses.

Bicknell's Educational Journals comprise several periodicals published by the New-England Publishing Company, of which Thomas W. Bicknell is president. Mr. Bicknell is the active business manager of all the interests of the company, and editor of its leading journals: viz., "Education," established in 1880, a bi-monthly magazine of 112 pages, containing contributions from eminent authorities; and "The Journal of Education, — New-England and National," "The Primary Teacher," edited by William E. Sheldon, and "Good Times," edited by Mrs. M. B. C. Slade. The editorial and counting rooms of these publications are at No. 16 Hawley Street.

"**The Boston Commercial Bulletin**," the office of which is on Washington Street opposite the head of Water Street, may be considered the pioneer, as well as the most successful, of a class of business papers devoted to trade, commerce, and manufactures, or, in many cases, to a single branch of trade. It was founded Jan. 1, 1859, by Curtis Guild, and is now published by Curtis and B. F. Guild, under the style of Curtis Guild & Co. These two brothers, both natives of Boston, are thoroughly experienced newspaper-men; and the influential journal which they publish is a model in its important way. It is a large, forty-column folio sheet, devoted to the financial, business, and manufacturing interests of the country; and its departments of market reviews, manufacturing news, stock operations, insurance, mining, business changes, failures in business, gossip of trade, are original features of the paper, which are presented in a singularly attractive and systematic manner. Beside its very full amount of commercial information, which is of value to every buyer or seller, "**The Boston Commercial Bulletin**" occupies a high position as a literary journal. A portion of the first page of each issue is devoted to original sketches or contributions from writers of recognized reputation. Authors whose names are familiar in the leading serials of the country are engaged in this department; and its column of original pungent paragraphs known as the "**Spice of Life**" is a recognized celebrity. The "**Bulletin**" is noted for accuracy and fulness in its different departments: it is a model in make-up, typography, and paper. Its circulation is quite large, penetrating every part of New England, and also extending all over the United States. It is issued weekly at \$4 a year.

"**The A B C Pathfinder Railway Guide**," issued on the 1st of every month by the New-England Railway Publishing Company, is a useful and indispensable publication, containing official time-tables of all New-England and Provincial railroad and steamboat companies, with complete maps of New England, and numerous sectional maps. The same company publish "**The A B C Pathfinder Once a Week**," containing corrected running time of every railroad centring in Boston, and correct sailing time of every harbor and coastwise steamer; "**The A B C Pathfinder Express List**," quarterly, giving a list of expresses in New England, revised by authority of the express-companies; and "**The A B C Pathfinder Shippers' Guide**," yearly, giving a list of all the railroad, freight, and transportation companies carrying freight out of Boston. The president of the company is R. S. Gardiner, and the manager and treasurer is N. E. Weeks. The office is at No. 117 Franklin Street. Rand, Avery, & Co. are the printers.

Other Publications, including weekly, monthly, and literary, art, religious, and miscellaneous publications, are numerous, and they address all classes of readers.

Markets and Exchanges.

THE MARKETS, TRADE EXCHANGES AND ASSOCIATIONS, AND STOCK-BOARD.

THE first market in Boston, it is believed, stood on the site of the Old State House. It is mentioned in Winthrop's Journal as having been "set up by order of the court" in March, 1634. A hundred years later three markets were located by the town,—one in North Square, one in Dock Square, and the third on the site of the present Boylston Market. Three hundred pounds were appropriated for their erection. They were opened on the 4th of June, 1734; and the townspeople were greatly pleased with them. It was long the custom to ring a bell daily at sunrise to give notice of the opening of the markets for the day, and at one o'clock P.M., the hour of closing. The market in Dock Square was the most frequented. In 1736-7 the old market-house here was demolished by a mob, "disguised as clergymen;" a contention having arisen among the people as to whether they would be served at their houses in the old way, or resort to fixed localities. By this summary method the question was for the time being settled. In 1740 Peter Faneuil proposed to build a market-house at his own expense on the town's land here in Dock Square; his only condition being that the town should legally authorize it, enact proper regulations, and maintain it for the purposes named. Though this offer was courteously received, such was the division of opinion, that it was accepted by a majority of only seven votes out of the number voting. The building was completed in 1742, and destroyed by fire in 1761. In 1819 a number of citizens erected what was known as the City Market, at the foot of Brattle Street, on the edge of Dock Square; but the General Court refused to incorporate the proprietors, and the city subsequently rejected the offer of the market as a gift.

The New Faneuil-Hall Market is the name given to the floor under Faneuil Hall, universally known as the "Cradle of Liberty." The building was erected by the city in 1762, to replace the market-house on the same site destroyed by fire the year previous. It was in 1805 enlarged to its present size, 100 by 80 feet. Faneuil Hall is 74 ft. 3 in. long by 75 ft. 3 in. wide, and has no seats on the main floor and only a few in the gallery. It is used chiefly for political meetings or great public gatherings. "Webster replying to Hayne in the United States Senate, Jan. 26 and 27, 1830," a painting 16 by 30 feet, by Healy, and numerous portraits by various

artists, adorn the walls of the hall. The hall is granted for such meetings as the city approves; and, although no rent is charged, the expenses, amounting to \$20 a day and \$25 a night, are paid by those using the hall.

Faneuil Hall and Quincy Market, Merchants' Row.

The Quincy Market. — The erection of Quincy Market, — first called the Faneuil-Hall Market, and still officially known by that name though popularly called Quincy, — and the extensive improvements about it, constituted the greatest enterprise of the kind that had ever been undertaken in Boston. It was one of the many great improvements in the city due to the remarkable energy and enterprise of Josiah Quincy, who, according to Drake, “invested the sluggish town with new life, and brought into practical use a new watchword, *Progress*.” At this time there was a row of vegetable sale-sheds on the north side of Faneuil Hall; and the neighboring streets were obstructed with market-wagons, while farmers were compelled to occupy with their stands Union Street nearly to Hanover, and Washington almost to Court. Work on Mr. Quincy’s project began in 1824, the corner-stone of the new market laid in 1825, and the work finished in 1826. The market-house is of Quincy granite, two stories high, 535 feet long, and covering 27,000 feet of land. The centre part, 74 by 55 feet on the ground, rises to the height of 77 feet, and is surmounted by a fine dome. The wings in their entire extent are 30 feet high. Upon each end of the building is a

portico with four columns, of the Grecian Doric style, each being one solid shaft of Quincy granite. The first story is occupied by the market, having its stalls on each side of a grand corridor, through the entire length of the building. Above was once a vast hall, called Quincy Hall; and here with Faneuil Hall, a bridge being thrown across the square, connecting the two, were long held the fairs of the Massachusetts Mechanics' Association. This hall is now divided into apartments, and occupied as warerooms. The market is certainly one of the most richly and extensively furnished markets in the country. It cost, exclusive of the land, \$150,000. In connection with the work of building this market, six new streets were opened, and a seventh greatly enlarged, including 167,000 feet of land, and flats, dock, and wharf rights obtained to the extent of 142,000 square feet. "All this," we quote from Quincy's History, "was accomplished in the centre of a populous city, not only without any tax, debt, or burden upon its pecuniary resources, but with large permanent additions to its real and productive property." The cost of the market, land, and street and other improvements, was \$1,141,272.

The Boylston Market, at the corner of Boylston and Washington Streets, when opened in 1810 was considered far out of town. It was named for Ward Nicholas Boylston, a great benefactor of Harvard College, which has named its chemical laboratory in his honor, and a descendant of Dr. Zabdiel Boylston, famous in the history of inoculation. Mr. Boylston presented the clock that now tells the time to passers-by. Over the market is Boylston Hall, in which the organization of several churches has taken place, and a variety of musical, theatrical, and miscellaneous entertainments have been held. It was leased for several years to the Handel and Haydn Society, and for many years it has been used by the public schools for drill purposes. The building is owned by the Boylston Market

Boylston Market, Washington Street.

Association, of which John Quincy Adams was the first president. The land was bought at 75 cents a foot, and the building cost \$20,000. In 1859 an extension of 40 feet was made; and in 1870 the building was moved back from the street 11 feet, without the slightest disturbance to the occupants. The second story now contains the headquarters of the First Brigade, and the armories of companies K and C of the First Regiment. Jonathan French is the president of the Boylston Market Association, and Hobart Moore the clerk.

In 1852 the Blackstone Market, on Blackstone Street, and the Williams Market, on the corner of Washington and Dover Streets, were opened; and a few years before the Beach-street Market, in the building where the Dramatic Museum had a short career in 1848. The Williams and Beach-street Markets are discontinued. At the present time, besides those already mentioned, there are the Washington Market, the farthest up-town market, established in 1870, in a spacious and attractive building 250 feet long, situated No. 1883 Washington Street; the Suffolk, corner of Portland and Sudbury; the Central, No. 50 North; the Globe, No. 42 North; the Clinton, 106 South Market; the Lakeman, Blackstone, corner of North; the St. Charles, Beach, corner of Lincoln; and the Union, 15 and 17 Washington Street. There is also, on Atlantic Avenue, between Clinton and Richmond Streets, the Mercantile-wharf Market, popularly called the farmers' market, supplied by the vegetable-farmers of the near-by towns. There are small market-houses also in East Boston and South Boston. Of the market-houses, the city owns only Faneuil Hall and Quincy, or, as the two are designated in the official records, "Faneuil Hall and market under same; Faneuil Hall Market-house and Quincy Hall over same."

The business exchanges of Boston are quite numerous, and are for the most part conducted on a broad and generous scale. The chief one is the

Merchants' Exchange and Reading-Room, on State Street, conducted by the Boston Board of Trade, in the old Merchants' Exchange Building, where the last great conflict with the flames of the Great Fire of 1872 took place. The first Merchants' Exchange was established in 1842, when the present building was built. It occupied a fine hall, its ceiling supported by imitation Sienna marble columns, with Corinthian capitals, and a grand dome overhead filled with stained glass. Notwithstanding that this was well equipped and well managed, it met with indifferent success; and some time before the Great Fire it gave way for the sub-treasury, which occupied the place until removed to its present quarters. When the Board of Trade took the matter in hand, its object was to establish an Exchange after the most approved plan, and on a par with the best and most complete in the country; and its ambition was to group all the business exchanges of the city under

one roof, with the Merchants' Exchange as the main gathering-place. The old building was extensively remodelled, and to some extent rebuilt, inside; and the new Merchants' Exchange and Reading-Room, as thoroughly equipped and as admirably arranged as any in the country, was opened to subscribers on Oct. 1, 1873. The main hall is 60 by 80 feet, and is well lighted by spacious windows and a monitor skylight. The floor is of diamond-shaped blocks of black and white marble alternately; a white marble dado, four feet high, with black border, encircles the room; and the ceiling is tastefully frescoed. Newspaper-racks are arranged along the hall's sides, one close to each of the fourteen pilasters; and the room is provided with every possible convenience. The bulletin-boards record market quotations, promptly received, from all parts of the world; the shipping-news is bulletined as received by telegraph; vessels arriving are immediately registered; sales of stocks and other securities are chronicled; every change of wind is noted on a dial marked with points of the compass and connected with a large weather-vane on the roof of the building; and a variety of other information of moment and value to merchants is here given. In the rear of the main hall is a large retiring-room, richly and comfortably furnished, with sumptuous-looking heavy mahogany morocco-covered chairs and lounges. Here are held the meetings of the Board of Trade. Admittance to the Merchants' Exchange and its privileges is given only to subscribers. These numbered in 1881 about 1,000, a falling-off of nearly 500 since the establishment of the rooms. This is accounted for by changes and death; but more particularly by the establishment of so many independent trade associations, the hope of gathering all organizations in one place not being realized. The cost of maintaining the establishment in 1880 was about \$35,000. The president is Eustace C. Fitz, and the secretary and superintendent is Edward J. Howard. The Merchants' Exchange Building was built and is owned by a stock corporation, under the name of the Merchants' Exchange Building Company. It cost, without the land, \$175,000. Its front is of Quincy granite. In 1880 many changes were made in the interior, including the introduc-

tion of the Board of Trade. Admittance to the Merchants' Exchange and its privileges is given only to subscribers. These numbered in 1881 about 1,000, a falling-off of nearly 500 since the establishment of the rooms. This is accounted for by changes and death; but more particularly by the establishment of so many independent trade associations, the hope of gathering all organizations in one place not being realized. The cost of maintaining the establishment in 1880 was about \$35,000. The president is Eustace C. Fitz, and the secretary and superintendent is Edward J. Howard. The Merchants' Exchange Building was built and is owned by a stock corporation, under the name of the Merchants' Exchange Building Company. It cost, without the land, \$175,000. Its front is of Quincy granite. In 1880 many changes were made in the interior, including the introduc-

tion of a Whittier elevator. On the same floor as the main hall of the Exchange is the insurance agency of Franklin S. Phelps & Co. Mr. Phelps has been in the agency and brokerage business on State Street for the past twenty-six years, and enjoys the patronage, confidence, and esteem of many Boston business men. The adjusting of marine losses is also a specialty of this firm; E. A. Kellogg, the junior partner, devoting his whole attention to this department.

The Boston Commercial Exchange occupies a spacious hall in the Board of Trade building, which is reached through the Merchants' Exchange, and by short flights of marble steps at the rear. It is provided with sample-tables, large blackboards for quotations, a case of "standards" for the different grades of flour and grain, — which standards are established with great care, and approved by a majority of the members of the Exchange, — books for the record of daily receipts of flour and grain, etc. The "change" hour is from 12 M. to 1½ P.M. every business day; and business is limited to the sale or purchase of flour or grain and other produce, at wholesale, for cash unless otherwise provided for. Important committees are those on inspection, one on flour, and one on grain. They act as umpires to settle all cases of dispute as to the grade, soundness, etc., of the articles under their supervision. The Commercial Exchange was formerly the Corn Exchange, which was established in 1855, but not incorporated until 1868. In 1871 the present name was adopted, that the title might be broad enough to include other interests. At about this time leading provision, fish, and salt dealers joined the organization. Subsequently, however, the latter gradually withdrew; and now no interests other than flour, hay, and grain are represented in the Exchange. The membership is about 250. Hersey B. Goodwin is president; and Frank W. Wise is secretary.

The Boston Produce Exchange is on the floor over the Quincy Market, in a spacious and lofty hall, directly under the dome of the building. This is an organization of recent date. It was organized in January, 1877. It includes the leading firms in the wholesale fruit, produce, and provision business; and a fair representation of other interests, such as the butter and cheese, fresh fish, etc. A "call" for the sale of produce is held daily at 11 A.M. The "change" hour is from 1 to 2 P.M. The membership is about 200.

The Boston Fish Bureau is the name of the fish-dealers' exchange, at No. 176 Atlantic Avenue, at the head of T Wharf. This is open daily, and is frequented by the most active men in the business. The fish-market of Boston continues to hold the leading position as the largest fish-market in the country; and it is one of the most important interests of Eastern New England. The president is Barna S. Snow, the secretary is William A. Wilcox, and the treasurer H. Staples Potter.

The Shoe-and-Leather Exchange is in the lower story of the building on the site of "Church Green," at the junction of Summer and Bedford Streets, convenient to all parts of the leather-district. It was established by the New-England Shoe-and-Leather Manufacturers' and Dealers' Association, incorporated in 1871 "for the purpose of promoting the general welfare of the hide-and-leather and boot-and-shoe interests of New England." The present quarters were occupied in March, 1877. Before that time, and since the Great Fire in 1872, the Exchange has occupied several places, none of which was altogether satisfactory; and the manufacturers and dealers were divided into two parties, — one desiring the general exchange located on Hanover Street, near the American House, which had long been the headquarters of the shoe-and-leather men; and the other advocating its establishment nearer the recognized leather-district of the business portion of the city. When at length the present rooms were opened, the advantages presented by them were so great that they were soon accepted as the principal headquarters of the trade. The main room is large, well lighted, and well equipped. It has ample side and retiring rooms, private and public offices, and a telegraph-office. A daily register is kept of the arrival of out-of-town dealers, and trade-reports are conspicuously bulletined. A great advantage to the members of the trade, who enjoy the privileges of the Exchange, is the information furnished by the Bureau of Credits, and the Bureau of Debts and Debtors, two important departments of the Shoe-and-Leather Association. The Bureau of Credits keeps books of ratings of the commercial standing of persons and firms dealing in hides, leather, boots and shoes, and findings, not only in New England, but in all parts of the country; and these lists are constantly revised. The Bureau of Debts and Debtors investigates any case of mercantile failure in the trade reported to it by a creditor, recommends, and, in an emergency, takes, such action as in its judgment will promote the interests of the creditor. The Exchange is open daily during business-hours for the convenience and profit of the subscribers; and on market-days, Wednesdays and Saturdays of each week, from 12 M. to 2½ P.M., the "change" hour, the place is crowded with men of the trade. The officers of the Shoe-and-Leather Association manage the Exchange; Augustus P. Martin is the president, and Charles S. Ingalls the secretary and general superintendent. Originally the trade had its headquarters at Wilde's Hotel on Elm Street, and subsequently at the American House on Hanover Street. Before the Great Fire, there was a much-frequented Shoe-and-Leather Exchange on Pearl Street.

The New-England Furniture Exchange is situated at No. 182 Hanover Street, not far from Haymarket Square. Its membership includes the principal manufacturers and dealers in furniture and kindred articles in New England; and its object is mutual protection and assistance in business.

It does not attempt to control prices ; but it exerts an influence in the matter of the length and condition of credits, and the rate of cash discounts. Like the Shoe-and-Leather Exchange, it has a record of credits ; and being in direct communication with the furniture exchanges in other cities, and working in harmony with them, under a plan adopted by the national convention of furniture-men held in New York in February, 1878, it obtains prompt information regarding the financial standing of firms and traders in all parts of the country, while it aids materially in protecting creditors and debtors from disastrous consequences of failures of incompetent and dishonest dealers. This exchange manages, in the combination of the furniture exchanges of the country, what is known as "The Boston Section," which embraces the trade in Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, that part of Connecticut east of the Connecticut River, and the Provinces of New Brunswick, Nova Scotia, and Quebec. The admission-fee of members is \$25, and the quarterly assessment \$6.

The Lumber-Dealers' Association was formed in 1869, to bring about "united action, perfect harmony, and mutual understanding among lumber-dealers." It numbers about 50 active members, resident in Boston and vicinity, and meets monthly during the winter. Its president is J. Otis Wetherbee, and its secretary Waldo H. Stearns.

The Mechanics' Exchange, which now occupies large and finely fitted up rooms at 33 and 35 Hawley Street, was started as a private enterprise in 1857, and was conducted for some time by Smith Nichols. It first occupied rooms at the corner of State and Devonshire Streets, and at various periods has since been located on the opposite side of State Street and at 17 Court Street. It removed to its present quarters in 1877. About ten years ago the Exchange was re-organized, and its management was placed in the hands of a board of officers chosen by the members. A yearly assessment of \$20 is paid by each firm belonging to the institution ; the members chiefly are master-mechanics connected with the various building-trades. The membership is now about 300, and is constantly increasing. The Exchange is open in summer from 7 A.M. to 6 P.M., and in winter from 8 to 5. The busiest hour is between 12 M. and 1 P.M. Then the rooms are crowded by the members, who meet to form plans, compare views, make contracts and bargains, pay bills, and transact other business. Many members have no other headquarters than the Exchange, and have special boxes here for their papers and correspondence. The operations of the members are not confined to the city ; and large contracts are taken for all parts of the country, including New England, New York, and the West. The building operations of Boston for 1876 amounted to about \$8,000,000, and the greater amount of these were carried on by members of the Exchange. The president of the Exchange is David Perkins, and the superintendent George B. Chadbourne.

The Massachusetts Charitable Mechanic Association was founded in 1795, and incorporated in 1806. Its annual income is employed to relieve the distresses of unfortunate mechanics and their families, to promote inventions and improvements in the mechanic arts by granting premiums for inventions and improvements, to assist young mechanics with loans of money, and to establish schools and libraries for the use of apprentices and the improvement of the arts. The association awards certificates to apprentices, who, on arriving at 21 years of age, bring testimonials from the persons with whom they served, showing that they have behaved with fidelity and attention, and have not violated any agreement made by them. Every

Massachusetts Charitable Mechanic Association building, Chauncy Street.

third year the association holds a special meeting called the "Triennial Festival." At irregular intervals, averaging every three years, it holds a public exhibition, popularly called the "Mechanics' Fair." For many years these fairs were held in the hall over Quincy Market and Faneuil Hall, the two being connected by a bridge extending over the street. In 1878 a temporary building for its fair was erected on Park Square, Columbus Avenue, and Pleasant Street. The fair lasted two months, during September and October, and was the most successful one yet held. The attendance was nearly 300,000; the number of exhibitors, 1,250; the receipts, \$110,000; the expenditures, \$75,000. The awards included 60 gold medals, 230 silver medals, 250 bronze medals, and 440 diplomas. In 1860 the association erected the fine dark freestone building, in the Italian Renaissance

style, on the north-west corner of Chauncy and Bedford Streets, at a cost, including the land, of \$320,000. On the upper floors is the large Mechanics' Hall, used for the meetings of the association, and rented for musical, literary, and other entertainments. The association in 1881 erected, at a cost of \$400,000, a permanent exhibition building at the corner of Huntington Avenue and West Newton Street. It covers a space of more than 96,000 square feet. Its front on the avenue is 600 feet, and on West Newton Street 300 feet; and at its widest part it is 345 feet. Its avenue front is Renaissance, with free treatment in style. Arches of graceful curves rise nearly to the coping. These and the adjacent walls are massively laid in red brick, with sills and caps of freestone, and terra-cotta ornaments. On one side of the main arch is a head of Franklin representing electricity, and on the other one of Oakes Ames representing railroading. Surrounding these are spandrels of palm, oak, and olive branches, in which appear the arm and hammer of the association's seal. An octagonal tower, 90 feet high and 40 feet in diameter, forms the easterly termination of the building. Here are two wide entrances, one from Huntington-avenue sidewalk, the other from the carriage-porch, itself an attractive piece of ornamentation, built of brick and stone with open-timbered and tiled roof. The building is admirably arranged for the purposes for which it was designed. At the easterly end, adjoining the tower, is the "administration building;" beyond this is the great exhibition-hall, with spacious galleries and an ample basement; beyond that, the main hall extending across the west end; and, between the balconies of these two halls, the art exhibition rooms and studios. The administration building contains on the first story the various offices; on the second floor, large and small dining-rooms; and on the third, a large and attractively finished hall. Among the early presidents were Paul Revere, who served 4 years; Jonathan Hunnewell, 9 years; and Benjamin Russell, 14 years. The officers for 1881 are Charles W. Slack, president; Nathaniel J. Bradlee, vice-president; F. W. Lincoln, treasurer; and Joseph L. Bates, secretary.

The **Boston Merchants' Association** is an organization established in 1876, and incorporated in December, 1880, "for the purpose of promoting the interests of Boston by maintaining places for social and business meetings and intercourse, and diffusing useful knowledge." It has standing committees, on arbitration, which are to decide questions of dispute and difference between members; on transportation; and on debts and debtors, to investigate failures in trade. It has a membership of 320 firms and individuals, representing the different business interests of the city, the wholesale dry-goods predominating. It is established in attractive rooms in the Charitable Mechanics' Association building, on the corner of Bedford and Chauncy Streets, which were first occupied in the summer of 1880. They comprise

MASSACHUSETTS CHARITABLE MECHANICS' ASSOCIATION BUILDING,
HUNTINGTON AVENUE AND WEST NEWTON STREET.

a main dining-hall fitted in ash tables and chairs of Eastlake pattern, and two parlors connected, for business or social purposes. The rooms are finely finished, and the walls are hung with an attractive collection of paintings. The annual and occasional dinners of the association are interesting local features, and it frequently leads in the entertainment of distinguished guests in the city. The president is Weston Lewis; treasurer, N. W. Farley; clerk, James H. Dexter.

The Boston Marine Society is one of the oldest organizations in Boston. It was instituted in 1742, under the name of the Fellowship Club, and was incorporated in 1754. Its active members are masters of vessels; and its honorary members are owners of vessels, merchants, and others. It aims to improve the knowledge of this coast by having its various members communicate in writing their observations on their inward and outward trips, of the variation of the needle, the soundings, courses, and distances, and all remarkable things about the coast; also to relieve one another and their families in poverty or other adverse accidents in life. The society has a fund of about \$125,000. Its grants to indigent members and their families in the past 80 years amount to \$300,000, of which \$120,000 was granted during the past 20 years. The president is Harvey Scudder, and the secretary Henry Howard. The society occupies Room 13 in the Merchants' Exchange building.

The Boston Board of Marine Underwriters was organized in 1850. Its object is to obtain such benefit as may be derived from consultations on measures of general interest, and from concerted action where such action is likely to promote the interests of its members, who comprise almost exclusively the Boston insurance-companies doing marine business. It has agents in all parts of the world, from whom is constantly received information regarding vessels in trouble. The inspectors of the board inspect and rate all vessels that arrive at this port. This board also makes the tariff of charges for marine insurance. The board has its office in the Merchants' Exchange building. Isaac Sweetser is president, and George H. Folger secretary.

The New-England Manufacturers' and Mechanics' Institute is a joint stock corporation, organized under the laws of the State; its fundamental object being to establish an organization of the manufacturers and mechanics of New England, for the purpose of securing the general improvement of its manufacturing and mechanical interests. It was organized in September, 1878, and incorporated in April the following year. Its capital stock was fixed at \$200,000, divided into shares of \$25 each. The first work of the new organization was the erection of a substantial, permanent, fire-proof exhibition-building. This was begun in the spring of 1881, and completed in the autumn. It is situated on Huntington Avenue, and

covers an area of nearly five acres of land. Its available floor space for exhibition purposes exceeds eight acres. The main entrance opens into an ample vestibule, which has a depth of 134 feet, and a lateral extent about 250 feet. Across the width of the vestibule three broad avenues extend, one leading directly to the central avenue or aisle of the main building, the others leading diagonally towards the two other aisles extending the full length of the main floor parallel to the main or central aisle. The interior construction of the main building is without partitions, so that the view of the vast interior is not obstructed. Two galleries, each 63 feet wide, extend lengthwise of the building. These are not built against the side walls, but

New-England Manufacturers' and Mechanics' Institute.

parallel to them, and at a distance from them of 63 feet. There are galleries also at the front and rear of the building, constructed in the usual way. The front gallery is spacious, and corresponds to the dimensions of the vestibule below it. The space bounded by the gallery fronts is 400 feet long, 126 wide, clear of columns, and open to the roof, a height of 80 feet. The first fair of the Institute was opened on Aug. 18. It is proposed to have similar industrial exhibitions annually. The president of the organization is James L. Little, John F. Wood is treasurer, and F. W. Griffin secretary. The fair is under the immediate direction of an executive committee, which includes the officers of the institute and representatives of different mercantile interests.

The Backbone of the City.

PROMINENT AND INTERESTING MERCANTILE AND MANUFACTURING ESTABLISHMENTS.

THE interesting features of Boston shown in the previous chapters, and many that were necessarily left unmentioned, are due chiefly to the liberality and culture of the business-men from whom is obtained the money required to carry to completion all material improvements. It is true that many professional men give money to aid great works ; but it will be found, if traced back sufficiently, that this money was earned by them, directly or indirectly, from the business-men. This fact alone would justify sketches of corporations and individuals who have acquired success in the honorable management of their various pursuits ; but to this can be added the statement, that many of the most interesting features of the city are in the factories and warehouses where the necessities and luxuries of life are made and sold.

If we think of the wares of the merchants, and also of the productive and commercial agencies employed to place them at the disposal of the people, we certainly will grant that the shops of a great city are among the most suggestive subjects for reflection. In a book of this class, making no claims to be a "city directory," there is but little space in which to notice the thousands of mercantile and manufacturing firms ; and this space must be given to only a few of those owning establishments of a prominent character or of great public interest. The business-structures include many of the finest specimens of architecture in the city. The stores contain displays of goods, that, placed in museums or exhibition-rooms, would make attractive and exceedingly valuable collections as works of art. In the manufactories, so often overlooked and so seldom looked over by resident or visitor, are to be seen some of the greatest exhibitions of skill and ingenuity, as well as some of the most interesting subjects. It is particularly appropriate to begin our sketches with that of a house uniting specially noteworthy architectural, commercial, and manufacturing features. We refer, of course, to

Macullar, Parker, & Company's great clothing-manufactory and piece-goods warehouse, one of the most successful and best-known establishments in New England, and one that has maintained its prominent and honorable position for thirty-three years. For nearly twenty years until April, 1879, the firm was known as Macullar, Williams, & Parker. Beginning

in Boston in 1852 as wholesale dealers in ready-made clothing, they opened a store on Ann Street, which was then the chief and central location for that branch of trade. The panic of 1857 induced the young firm to attempt the sale at retail of the stock they were then carrying. It was hoped that relief from the general financial pressure might be secured in this way. For this purpose they took a store in the old Washington Coffee House building on Washington Street. The experiment was successful. It was the means of introducing to general notice a much better grade

Macaulay, Parker, & Company, Washington Street.

of ready-made clothing than that ordinarily sold, and gave character and reputation to the new store, by showing that a genuine substitute for custom clothing was undoubtedly within the range of possibilities. Nor was this the only change effected by the experiment. The firm were encouraged by their great success in this venture to embark permanently in the retail business; and their working force, now largely increased, was employed mainly in the production of goods required by the best class of retail trade. The manufacture of white vests for the wholesale market was, however, continued; and the services of forty operatives were required the year round to meet a demand which has never been limited to this country,—orders for these

goods being often received from abroad. In 1860 they removed to the store formerly occupied by George W. Warren & Co., at 192 Washington Street; and in 1864 they took possession of the elegant building which had been specially erected for them by the trustees of the Sears estate. Thus far their progress had been without interruption. Their enterprise and perseverance had gradually developed an immense business. They had added a department for making clothing to order, and were also largely engaged in other branches of the trade. The importation and jobbing of

woollens and tailors' trimmings brought them correspondents in almost every State in the Union. As manufacturers they had fairly earned the reputation of producing the best goods in their line that were made in the world. The importing and jobbing of cloths and tailors' trimmings have gradually developed into an important branch of the business, the immense lower floor on the Hawley-street side being wholly devoted to it. The cloths are bought directly from the greatest and most trustworthy woollen-manufactories of Europe, and are sold to leading merchant tailors in the principal cities and towns of the Northern States. Two salesmen are engaged in New-York City, where the firm have an office. Another is engaged in Philadelphia, another in Chicago; and several others travel in all parts of the country, to receive and transmit orders from merchant-tailors to the house in Boston. By combining the retail clothing with the wholesale cloth business, exceptional advantages are gained for the firm's customers in both branches,—(1) for the buyers of clothing, because the firm can make purchases of cloths in very large quantities, and thereby obtain the lowest prices and the most satisfactory terms; and (2) for the buyers of cloths, because, the goods being bought chiefly to meet the demands of the best trade of New England, the merchant-tailor patrons of the firm have an additional assurance that they will please the best trade of the whole country.

An interruption finally came in an unexpected form. The Great Fire of Nov. 9, 1872, in its westerly progress reached their store and destroyed it, but did not advance farther in that direction. The beautiful white-marble façade, bearing the name of the firm, did not fall, but remained intact in its position until taken down by the workmen,—a picturesque and striking monument of the great disaster, and presenting such a contrast to the blackness and desolation of the surrounding ruins, that it became a conspicuous object of interest to all visitors. The lower part of this front, as it appeared a few days after the fire, is represented by the middle section of the picture on page 15.

The check to business caused by the fire was only temporary. No time was lost in providing and fitting up premises for manufacturing; and the most liberal provision was made for the operatives, so that there were no cases of individual suffering within the few days before work was resumed. A salesroom was opened at No. 33 Washington Street, and was occupied until a new store, similar to the one destroyed, was erected on the old site. Of this new building we have not space to give a full description. A few lines must suffice. It is at once grand in its proportions, simple and graceful in its architectural beauty, and admirably adapted to the purposes of the firm. It extends through from Washington Street to Hawley Street, but no view from either frontage can give an adequate idea of its dimensions. The sectional engraving herewith presented partially illus-

trates what is being daily performed on its acre and a half of flooring by the five hundred and fifty salesmen, bookkeepers, and operatives, who find constant employment in the different departments. Two sales and exhibition rooms contain an area of 11,000 square feet each. Other apartments, to the number of three or four, are larger than ordinary town-halls. Every thing is fireproof, so far as human precaution can avail. All the appointments of the shops are on a generous scale, and specially adapted to secure the health and comfort of the employes therein. No signs of imperfect ventilation can be detected. The air is as pure, and the abundant light strikes as advantageously, as within any four walls in the city. A natural well on the premises daily supplies thousands of gallons of the purest water; in addition to the regular Cochituate supply.

The firm of Macullar, Parker, & Company now consists of six members, — Addison Macullar, Charles W. Parker, Nathan D. Robinson, Ira B. Fenton, James L. Wesson, and Hatherly Foster; the four last-named gentlemen having been advanced at various times from positions in the different departments to take their places in the copartnership.

Bradstreet's Improved Mercantile Agency occupies for its Boston business the spacious and elegant offices at 100 Franklin Street, corner of Devonshire. The name and purpose of this organization is familiar to merchants, manufacturers, and bankers throughout the civilized world. It was established in 1849 by J. M. Bradstreet, who soon after admitted his son under the firm-style of J. M. Bradstreet & Son. In 1863 the senior died; but, by special act of the Legislature of the State of New York, the style remained the same until April, 1876, when it was incorporated. In August of the same year the business was purchased by the present stockholders, and has since that time been conducted by The Bradstreet Company. It has been from its inception noted for enterprise and progressiveness, and, under the present management especially, has made rapid strides toward perfection by the adoption of a system and discipline excelled by no corporation extant, and being equivalent to that of the strictest military organization. Having no entangling alliances, owning and controlling its vast business in America, Europe, Australasia, and the Hawaiian Islands, it stands before the commercial world to-day as the best exponent of a system which the wonderful development of intercommunication and the changed relation of business interests have made a necessity. This company also publish the well-known journal, "Bradstreet's," which has become an acknowledged authority on all subjects connected with trade, finance, and public economy. The information and statistics presented in this paper, and particularly the reports of the condition of business, the growth, maturity, and volume of the leading cereals, are distinctively its own, and are eagerly sought for and copied by the better class of American and European journals.

Little, Brown, & Co., 254 Washington Street, are the lineal successors of a book-shop kept in 1784 by E. Battelle, in the Marlborough Street of that time. In 1787 this business went into the hands of Benjamin Guild, who called it the Boston Bookstore, and kept it for a while at 59 Cornhill (now Washington Street), and afterwards at 1 Cornhill, on the south corner of Spring Lane. In 1792 Samuel Cabot became the proprietor, and continued as such until 1797, when he was succeeded by William P. and Lemuel Blake, who, besides keeping a good stock of books and stationery, published a few works, and kept a circulating library. They sold out in 1806 to William Andrews, who carried on the business until his death in 1813. Then Jacob A. Cummings, a schoolmaster, and William Hilliard, a printer, and proprietor of the Harvard University bookstore, became the purchasers. In 1821 Timothy H. Carter was admitted as partner; and, after Cummings's decease, several persons, among them Harrison Gray, Charles C. Little, John H. Wilkins, Charles Brown, and James Brown, were at various times members of the firm, the style of which was consequently changed. It was in 1825 Cummings, Hilliard, & Co., and in 1827 Hilliard, Gray, & Co. In 1830 the firm sold their stand and a part of their stock to William Hyde, and they themselves removed to Washington Street. Here they greatly increased their transactions in the publication and sale of law-books and the importation of foreign works. In 1837 Charles C. Little and James Brown became the sole proprietors; and in 1846 Augustus Flagg was admitted as partner, and the present firm name was adopted. This, therefore, is the oldest house in its line in Boston. For many years the firm have been the leading American publishers of law-books; and through their publication of the laws of the United States, and of the works of Kent, Greenleaf, Story, Parsons, Washburn, Wheaton, and other eminent legal authors, they are well known to lawyers everywhere. They publish monthly "The American Law Review;" and a considerable portion of their shelves is devoted to standard and rare works in American and English law. In general literature their publications are mainly of the solid kind, such as the histories of Bancroft, Palfrey, Parkman, and Sparks; the speeches of Adams, Everett, Quincy, Webster, and Winthrop, and

Little, Brown, & Co., Washington St.

mental work in pottery, porcelain, and glass is represented and shown with excellent effect. The larger room is hung with beautifully framed plaques; while vases, screens of Japanese embroidery, and other ornaments, occupy the vacant space. Adjoining this is the dining-room, where all that belongs to the service of the table is finely displayed. Better arrangements for showing goods can hardly be found elsewhere. The spacious building is constructed of Nova-Scotia freestone, and is situated on the corner of Franklin and Federal Streets; and its six large floors are wholly occupied by this firm. It stands on the site of the old Boston Theatre,—sometimes called the Federal-street Theatre,—which was opened in 1794, with the tragedy of “Gustavus Vasa Erickson.” The business was established in 1810, by the father of ex-Mayor Otis Norcross, and for seventy years has been an uninterrupted success. The partners are Jerome Jones, Louis P. McDuffee, Solomon P. Stratton, and Otis Norcross Howland.

Rice, Kendall, & Co. are the successors of Wilkins, Carter, & Co.,—a firm for many years well known as paper-dealers, and publishers of valuable books. The two senior members of the present firm, Alexander H. Rice and Charles S. Kendall, were the junior members of the old firm. Mr. Rice had graduated from Union College in 1844. He was bred to business and the manufacturing of paper almost from the start. He was born Aug. 30, 1818, at Newton Lower Falls, where his father, Thomas Rice, was an extensive paper-manufacturer. He acquired a knowledge of the processes employed in the making of paper long before he learned the routine of trade, or had entered upon the work for a liberal education. His course was marked out for him as if by the hand of destiny; and, a few years after the new firm was organized, the publishing of books was relinquished, and the whole energy of the firm was devoted to the paper-trade. This was about 25 years ago. At that time they began to supply paper to “The Boston Herald” and “The Boston Journal,” and have done so ever since, adding to their list of customers several papers in New York and elsewhere. In writing, printing, and wrapping papers they are the largest dealers in Boston, and have supplied a good part of the paper upon which our publishers have printed their best books. They have large contracts with many of the principal mills in New England. Their supplies of writing-paper are piled up by tons in their great warehouse on Federal Street. Taken as a whole, this firm are probably the heaviest paper-dealers in New England; and certainly no house is better known. This is owing in part to the public career of the senior partner. Mr. Rice’s first important trust was that of mayor of Boston, to which he was elected, by large majorities, in 1856 and 1857. In 1858 he was sent to Congress from the Fourth Congressional District, and was re-elected in succession to the Thirty-seventh, Thirty-eighth, and Thirty-ninth Congresses. He declined a nomination for the fifth term. In the

Thirty-sixth Congress he was a member of the special committee on the Pacific Railroad. In the next Congress he was transferred to the Committee on Naval Affairs, where, as chairman, he occupied a position of great responsibility and labor during the civil war. Since retiring from Congress he has frequently been called into public service, and, in his readiness to advance the best interests of the community, has won the esteem of his fellow-citizens. There have been few business or philanthropic movements with which he has not been identified; and while in Washington, in May, 1872, he was accorded by the Senate the rare compliment of the privilege of the floor. In 1875 he was elected governor of Massachusetts, to which position he was rechosen for the two years succeeding. In this office he made his influence felt in all the centennial celebrations of the State. He inaugurated civil-service reform, in the appointments within his gift, upon a most satisfactory basis. The "Governor," as he is called, is none the less a business-man for all his public service. At Union College, June 22, 1881, he delivered the chancellor's oration on "The Reciprocal Relations of Education and Enterprise," — a discourse of such importance that the trustees of the college requested its publication.

Gov. Rice's associate senior partner is Charles S. Kendall, who has occupied himself wholly with the great business of the firm, excepting the time which he has devoted to several prominent financial and benevolent institutions, with which he has for many years been identified. The other two members of the firm are J. Willard Rice, who entered in 1856, and Charles S. Kendall, jun., who entered in 1863.

The warehouse now occupied by Rice, Kendall, & Co., is No. 91 Federal Street. It is a handsome, five-story, Nova-Scotia stone building, erected in 1880 to replace one burned in the preceding December, and is one of the most commodious and best-equipped paper-warehouses in this country.

The South-Boston Iron Company succeeded Cyrus Alger, the famous metallurgist and distinguished inventor. Mr. Alger's inventions were numerous, and some of them of great value. He purified cast iron so as to give it triple strength, and first introduced the method of making cast-iron chilled rolls, by which the part subject to wear is hard, while the necks remain unchanged in hardness and strength. He also improved the construction of reverberatory furnaces, and constructed the first perfect brönze cannon for the United-States Ordnance Department and for the State of Massachusetts. Mr. Alger went to South Boston in 1809; and the South-Boston Iron Works, of which he was the founder, practically date from that time, although not incorporated until 1827. The works, covering nearly seven acres, have been enlarged from time to time, and are now the most extensive of their kind in America. A visit to the several buildings on Foundry Street, South Boston, would prove quite interesting. The foundry is the

Office 70 Water Street.

largest in New England. In it iron castings weighing as much as 100 tons, or bronze castings of 10 tons, can be made. The gun-shop is used for the manufacture of the very heaviest and most powerful^h ordnance and projectiles. One gun, in the rough, weighed 87 tons, and, when finished, 45 tons. During the civil war they furnished the government with over 1,700 guns, including 700 bronze guns and howitzers, about 700 solid cast-iron guns of 11-inch calibre and less, together with 322 Rodman guns having a calibre of 10 inches or more, and also some 500,000 rounds of ammunition of all sizes. The machine-shop is thoroughly equipped for the heaviest general machine and hydraulic work. The pattern-shop is the storage and finishing room for patterns used in these works, and by machinists elsewhere. The boiler-shop, where the huge boilers for mines, water-works, steamships, and other purposes are made, is the largest in the vicinity of Boston. Some specialties of this concern are cast iron, guaranteed 30,000 pounds to the square inch, more than twice the strength of ordinary cast iron, and gearing made under special patents. These works were to a great extent the means of building up South Boston. They have conveniences and room for giving employment at night and day to 1,200 men, and have frequently given employment to 800. They are one of the great sources from which the United-States government obtains its ordnance and projectiles. These works now construct the new breech-loading guns of 12-inch calibre,—the largest ever made on this continent, the weight of each as finished being 55 tons. The president of the company, William P. Hunt, has already been mentioned as president of both the Atlas National Bank and the Forbes Lithograph Manufacturing Company. The manager of the works is John B. Pearse. The city office is at 70 Water Street.

The Whittier Machine Company was incorporated in 1874, and succeeded to the business of Campbell, Whittier, & Co., which began 35 years ago. The works cover an acre of ground, fronting on Tremont Street, and extending to Hampshire Street. The main building is of brick, 206 by 37 feet, and two stories high. Off from the main building is the blacksmith shop, 55 by 33 feet; and in an adjoining room is a 25-horse-power engine, with a 50-horse-power boiler, that operates the machinery. On the south side of the main building is the boiler-factory, 100 by 67 feet, containing a powerful steam-riveter and other heavy machinery. At the easterly end of the yard is a two-story warehouse-building, used partly for stables. This company employs 200 or more persons, and strives to secure competent and trustworthy mechanics; to train them to its style of work, and then to give them constant employment. It is a principle of the management to discover the merit of each workman, and advance him to the position which his merits have won. Some of their employes have been in the establishment over 30 years. The company is composed of six persons, each own-

ing a certain portion of stock. The great specialties of the Whittier Machine Company are steam-boilers and steam and hydraulic elevators. The whole work in wood, iron, or other materials, necessary to build and put up elevators, steam-engines, and boilers, is carried on under one roof. In connection with their specialties they own many patents covering recent and valuable improvements, one of which allows the combination of a double screw with a single winding-drum, without the loss of any of the safeguards usual to similar machinery. Another improvement is the lever arrangement, by which the slackening of the hoisting-rope from any cause checks the motion of the winding-drum, and locks the elevator-car until the rope is properly adjusted. Their elevator-cars are used by thousands of people every day in all parts of the country, and the name of the Whittier Machine Company is well known in Boston, New York, and other large cities. Many buildings, noticed in this book, have the Whittier elevators. Among the buildings in Boston are those of the United-States Post-Office, the Mutual Life-Insurance Company, the Equitable Life-Assurance Society, the Hotel Vendome, the Hotel Brunswick, the Parker House, the Hotel Boylston, the Evans House, the Hemenway Building, Young's Hotel, the First National Bank, the Merchants' National Bank, and the Merchants' Exchange. In New York, Brown Brothers & Co., bankers, the Orient Insurance Company, and the Stevens Building, all on Wall Street, use the Whittier elevators; and, not to mention other names, they are found in the "Tribune" and the Metropolitan Bank Buildings, and Metropolitan Hotel. They are also used in the Riggs House, Washington. This company was awarded a gold medal for hydraulic elevators, a gold medal for steam elevators, and a silver medal for steam-boilers at the Mechanics' Fair in 1878, and also received the highest award at the Sydney International Exhibition at New South Wales in 1879. The works are numbered 1176 Tremont Street, and the main office is in the New-England Life-Insurance Company's building, corner Milk and Congress Streets. The president is Charles Whittier, who, 35 years ago, became connected with the firm of Campbell, Whittier, & Co., mentioned above; and the treasurer is A. C. Whittier.

Williams & Everett's Fine-Art Galleries.— This firm have been so long engaged in business, and have given such satisfaction to the art public, that their store is known all over the land; and no one can say that he has seen Boston till he has been in their famous old print-shop and picture-gallery. The business was established in 1810, when John Doggett and S. S. Williams opened a store in Cornhill. Since that time there have been only four changes in location, and but four changes in organization. The present style of the firm was adopted in 1853, and the store now occupied built in 1873. Long known as the pioneer art-store of Boston, their rooms have intro-

duced to the public the works of William M. Hunt, Dr. William Rimmer, R. H. Fuller, G. S. Healy, Thomas Hinckley, Mrs. Darrah, and other well-known artists. Here, too, French pictures were first offered to Boston buyers. As interest in art has increased, the firm have extended their facilities, and have now direct relations with many prominent European artists, and with leading European dealers and experts. Their stock is the largest in New England, and one of the largest in the country. In the gallery, regarded as the best in Boston, reached by a grand staircase at the rear of the store, and open freely to visitors, are to be seen some of the finest pictures of our time, both American and foreign; and in the ante-rooms, connected with the gallery, may always be found choice and desirable works. In the store are departments for engravings, water-colors, and photographs. If you want a fine engraving, a rare

Williams & Everett, 508 Washington Street.

proof, a unique etching, a carbon reproduction of a favorite picture by one of the old masters, or a representative work of the modern schools, if you desire instructive photographs of ancient sculpture or classic ruin, you are sure to find them in the ample folios of this establishment. Frames and pictures are so closely connected, that the firm have always made a specialty of picture, portrait, and mirror frames. For this work they occupy the entire upper floors of their building, and employ from

thirty to fifty skilful workmen. Artistic styles and thorough workmanship have given them pre-eminence, and secured them customers all over the country. Artists realize the importance of appropriate frames for pictures; and many prominent painters, from Gilbert Stuart and Washington Allston of early days to William M. Hunt, George Fuller, and others of later date, have been quite content to trust this matter to the taste and judgment of this house. The buildings of Williams & Everett have their main front on Washington Street, No. 508, while the L-front is at 5 Bedford Street. The illustration gives a view of the lower store with the staircase leading to the gallery.

William Underwood, founder of the house of William Underwood & Co., soon after his arrival in the United States in 1822 established the house of which his son William J. Underwood is now the head. The thorough practical knowledge of the business undertaken had been acquired in the celebrated London house of Mackay & Co., where Mr. Underwood had served as man and boy for twenty years. American tables were dependent for their pickles, preserves, mustards, sauces, etc., upon importations from abroad; and it was no easy matter to compete with the prejudices in favor of the well-known standard articles. But the sterling fidelity of Mr. Underwood's character was shown in the quality of the preparations he offered as a substitute for those heretofore in use. The brand of his firm was soon recognized as the synonym of excellence, and the business grew into extensive proportions. The old books of the firm show that consignments of the new American-made goods were early sent to Pernambuco, S.A., Hong Kong, San Salvador, Havana, Gibraltar, St. Thomas, W.I., and Batavia, besides the leading Southern cities of the United States. Invoices of goods were put on board ship, with instructions to the captain to make a market for them wherever he went. In 1825 is recorded a consignment by schooner "Caroline," to Hartford, Conn., the captain to have one-half the profits for his trouble. In the same year sales were made to Boston houses whose successors are still buyers from the old firm. In contrast with the facilities of making business known to-day, the above reads like romance; but it exhibits strength of purpose, energy, and industry, which business virtues command the respect of all times. In 1830 Mr. Underwood moved into the store 67 Broad Street, where he has ever since remained, but from which he will shortly remove to 141 and 143 Richmond Street. In the same year he began to pack pie-fruits in glass, for which a large demand was created. In 1835 he imported tomato-seed in order to grow the plant in large quantities for his catsup. In 1837 he began the importation of olive-oil and macaroni from the Mediterranean. All glassware used at first was imported; but after the failure of one or two parties he found in Whitney Bros. of Glassboro', N.J., the men to supply bottles of home production; and they still furnish the

firm with his wares. The first factory for lobster-packing was established by Mr. Underwood in 1848 at Harpswell, Me. In 1853 he began packing salmon at Bathurst, N.B. Quantities from this source of supply were furnished California, before the salmon-packing had begun on Columbia River, Ore. Thus deep and strong were laid the foundations of the business transmitted to the present firm by the death of Mr. Underwood in 1864. It is unnecessary to say that the business is in good hands: the same high standard of quality for all goods sold is steadfastly adhered to; the same just and fair treatment of the public; there is no deviation from that policy which first gained, and then kept, the customers whose names appear on their books for more than half a century. The record of this house is one of which Boston may well be proud.

The Howard Watch and Clock Company, and **E. Howard & Co.**, are practically the same firm. In its line of business it is the oldest American concern that is continued by the party or parties by whom it was established. E. Howard, now at the head of these organizations, was in 1842 the senior member of Howard & Davis. In 1850 he, in connection with A. L. Dennison, became one of the chief organizers of the Boston Watch Co., building on the site of the present Howard factory, the pioneer establishment for making watches in America. In 1853, more room being needed, a new factory was built at Waltham, and the business was moved there. Three years later Mr. Howard returned to Boston, and in 1857 re-established the watch-factory at the original works. Beginning with 5,000 square feet of floor surface, the works have increased so that they now contain 88,000 square feet. The old factory building is illustrated on this page: it is only one of the group that now form the factory wherein are made the high grades of watches and clocks for which the Howard Company are so justly celebrated. It is the company's constant aim to keep up the quality, improve the styles, and bring out such improvements as experience and

The Howard Watch and Clock Company, 163 Hampden Street.

thought may suggest; and as a result, their watches and clocks are well known and extensively used all over the United States,—especially the clocks for church and town-hall towers, railroad depots, public buildings, and large manufactories. Their clock-work for astronomical purposes is used by several of the leading observatories; and their electric clocks are the best that are made. The factory is at 163 Hampden Street; and the offices are at 114 Tremont Street, Boston, and at 2 Maiden Lane, New York.

Fairbanks, Brown, & Co. represent E. & T. Fairbanks & Co. of St. Johnsbury, Vt., the world-famous scale-makers. The business of the

Messrs. Fairbanks began in 1825, and now gives employment to about 1,000 men. The workshops at St. Johnsbury are solidly built of brick, and have a floor-area of $6\frac{1}{2}$ acres. The corporation owns 93 tenement-houses, a saw-mill, and 6,000 acres of timber-land, all connected with the works; 4,000 tons of coal, 5,000 tons of iron, and 2,000,000 feet of lumber are yearly consumed. The annual freightage is 20,000 tons; and the annual product of this factory is 50,000 to 60,000 scales of every style, size, and value. The quality of these scales is unequalled by those of any other maker. The firm has twenty-eight business depots in this

Fairbanks, Brown, & Co., Milk and Congress Streets.

country, a large establishment in London, and branches all over the world. In 1877 a large five-story, flat-roof warehouse was erected for the Boston branch at 83 Milk Street, fronting Post-Office Square. The fronts, 27 feet on Milk Street and 95 feet on Congress Street, are of light Ohio sandstone. The building in appearance is characteristic of the solid concern that occupies it; and the architect, Nathaniel J. Bradlee, fully considering the needs of the business, adapted the building to them. It is in one of the very best locations, and is surrounded by the new Post-Office and the buildings of the New-England Life, the Mutual Life, and the Equitable Life Insurance Companies described heretofore. The lower floors contain a beautiful display of Fairbanks scales, and also type-writers, money-drawers, coffee-mills, store-trucks, and other articles of useful store equipments.

E. & G. G. Hook & Hastings' large church-organ establishment, on Tremont Street, is especially worthy of mention. Established in 1827 by Elias and George G. Hook, who began in a small shop on Friend Street, afterward moving to one on Leverett Street, their business has since increased until the capacity and production of their present factory is greater than that of any other in the world. Both of its founders having recently died, the principal of the house is now F. H. Hastings, who for nearly thirty years had been engaged in the business with them, and for fifteen years or more has been the active partner. Messrs. Hook & Hastings have furnished ninety-five church-organs in the city of Boston alone; and their instruments are found in every part of the country, and have a world-wide reputation. The largest and smallest organs, for cathedrals, churches, halls, or parlors, are built by them; alike in mechanical excellence and in that purity and richness of tone which characterize all their instruments. During the fifty-four years in which they have been engaged in business, they have completed eleven hundred instruments, among which are the most noted and the largest organs on this continent. The magnificent organ in the Music Hall at Cincinnati, O., built in 1878, is the largest in America. It stands unrivalled in purity and power, perfection of mechanism, and general excellence. This instrument has four manuals, ninety-six stops, twelve pedal movements, — including a grand crescendo pedal which controls every stop in the organ, — and 6,237 pipes. The large four-manual organ in the Church of St. Francis Xavier, New-York City, built by them in 1881, is unequalled by any church-organ in the country, if the one in our Boston Cathedral be alone excepted. The factory, at 1131 Tremont Street, is two hundred feet long, and contains two finishing-halls, beside many large work-rooms, fitted with all available machinery, and every convenience for manufacturing and testing instruments of the largest size; as well as large store-houses in which lumber, obtained from all parts of the continent, is dried and stored. Their large business enables them to systematize their work under the direction of various experts, each proficient in his own department; thus securing the most perfect result and the greatest economy. Possessing and applying all important improvements, their relations with eminent European builders, the employment of experts trained in their factories, the ingenuity and skill of our American workmen, combined with their constant endeavor to advance the standard of their work, has enabled these builders to attain the highest position in their art. Their factory is a constant source of pleasure and instruction to musical strangers visiting our city, who are at all times cordially welcomed; and to see the work in its various stages toward the completion of either a small organ for some gentleman's parlor, or a large one for some church, many of which are always to be seen, well repays a visit to this old establishment.

The Boston Rubber Shoe Company, incorporated in 1853, operates one of the largest manufactories in the vicinity of Boston. The buildings were rebuilt in 1876, expressly for the business now carried on, with all the modern improvements. They are of brick, and of substantial appearance; the main structure being quadrangular in form, and four stories high, with extensive wings, with a floor-surface of more than five acres. All rooms are the width of the buildings, and have windows on both sides, affording light and air. Besides the main buildings, there are large store-houses, dye-works, boiler and engine rooms, and stables. The company employs at the present time 1,400 operatives, and has facilities for making 18,000 pairs of rubber boots and shoes per day, or between five and six millions per annum. The process of making these goods is quite interesting, and well worth

Boston Rubber-Shoe Company's Works, Malden.

seeing. On the first floor of the main building is the grinding-room, where the rubber is ground, cleansed, and prepared for cutting; on the third floor are the cutting and shoe-making departments; on the fourth floor are cutting and boot-making depart-

ments; and the second floor is used for packing and shipping goods. In one of the wings, 50 by 175 feet, are the heating-ovens for vulcanizing purposes, and extensive machine and repair shops. On the north end of the main buildings are the engine and boiler buildings, containing three Corliss engines of 600, 400, and 300 horse-power respectively, and twenty-one large boilers, consuming thirty tons of coal daily. In 1881 two new two-story brick buildings were added; one 40 by 65 feet for grinding rubber by machinery, and the other 45 by 65 feet for a carpenter-shop. The factory-buildings are picturesque, and are always kept in excellent repair. Connected with the works is a library for the exclusive use of employes. The works are at Malden, four miles from Boston, on the lines of the Boston and Maine Railroad, and Saugus Branch of the Eastern Railroad; two lines of tracks of the former running into the factory-yard. The counting-rooms and warehouse occupy the whole of the four-story marble-front building, 187-195 Congress Street, Boston. The capital employed in the business is more than one million dollars. The president is J. W. Converse of Boston; the treasurer and general agent, E. S. Converse; and the superintendent of factory, E. F. Bickford.

Hogg, Brown, & Taylor occupy the large granite building on the north-west corner of Washington Street and Temple Place, including Nos. 477 to 481 Washington Street, and Nos. 60 to 70 Temple Place. The building is 100 by 84 feet. It has on its four floors and basement a floor surface of about an acre. It was built in 1863-64, expressly for this firm. Its plain and substantial looking exterior is an indication of the reliable and stanch firm that own and occupy the whole building. In 1857 John Hogg, George B. Brown, and John Taylor, under the firm name of Hogg, Brown, & Taylor, which has ever since remained unchanged, succeeded to the business of Kinmonth & Co., who at that time were everywhere known as one of the

Hogg, Brown, & Taylor, Corner of Washington Street and Temple Place.

foremost dry-goods houses in New England. The present firm have not only maintained the reputation of their predecessors, but have constantly advanced, and to-day they are known as one of the largest and best houses in the dry-goods trade in this country. They are wholesale and retail dealers, as well as extensive importers, of dry goods and all articles usually found in the largest dry-goods establishments. A characteristic feature of this firm is its quiet way of transacting its business. Hardly ever is its advertisement seen; and yet the spacious quarters are crowded at all hours of the day, for the ladies of Boston and its vicinity know that they can always rely on Hogg, Brown, & Taylor for the best and most fashionable goods at equitable prices. In the building there are about 200 employees; and, besides these, many persons are employed elsewhere for making ladies' wear. The death of Mr. Taylor in April, 1875, and the retirement of Mr. Brown in the following July, leaves the present firm consisting of John Hogg, Henry R. Beal, Albert H. Higgins, and Alexander Henderson.

The Nonotuck Silk Company of Florence, Mass., although its works are about 100 miles away, can be classed among the Boston firms. The products of the company, consisting of black and colored machine-twist, button-hole twist, and embroidery and sewing silk, are kept and handled in very large quantities in Boston. The warerooms at No. 18 Summer Street, in the four-story sandstone-front building, are extensively and admirably fitted up. The business of the Nonotuck Company, established forty years ago, has a remarkable history. It was the first company in the world to manufacture machine-twist. Its works at Florence and Leeds have a floor surface of 100,000 square feet, give employment to about 700 operatives, and consume more than 175,000 pounds of raw silk each year. The aggregate length of finished silk from their works exceeds 3,000 miles a day, or enough to encircle the globe once a week. The Nonotuck silk and twist are sold under the trade-mark names of "Nonotuck" (the early Indian word for Northampton) and "Corticelli." A great specialty is made of knitting-silk, and the company's brand of "Florence Knitting Silk" has already become famous. The various manufactures of this company received medals at Philadelphia in 1876, and at Paris in 1878, besides many first premiums at state and county fairs and industrial exhibitions. The agency for the New-England States is under the charge of George D. Atkins, who has been connected with the Nonotuck Company for the past nineteen years.

John A. Lowell & Co. are the leading fine-art engravers in this country, and to no other firm is due so much for the progress made in fine-art engraving on steel. For twenty-five years Mr. Lowell, with his corps of assistants, has been constantly producing novel and ingenious and yet artistic designs. Then he has had almost unparalleled success in having these designs engraved in the finest possible manner on steel. Not only do these engravings include commercial stationery, bonds, bills of exchange, cards, letter-headings, diplomas, etc., but they consist at present to a great extent of purely fine-art work. Hunt's famous "Bathers," for instance, is now in process of completion, the first etching being already finished. It is being published by subscription, and the list of subscribers includes many of America's art connoisseurs. The prints will be of three grades, with prices ranging from \$10 to \$25. The circulars announcing this engraving, although they are for gratuitous distribution, are in themselves works of art. Within the last three years this firm created a new industry, — the production of steel-engraved cards or folders adapted to business purposes. Up to that time steel-engraved pictures of any grade of excellence were regarded as too expensive for use in this way, and their introduction was attended with considerable risk. They became immediately popular, however; and the demand for them was so regular that new varieties were issued before the first were hardly dry from the press. From that time on the demand has increased,

and now new designs are issued every week. This is true in the experience only of the house of John A. Lowell & Co., who were the first to introduce the cards, and whose successful efforts have created a livelihood for many imitators. This firm have easily kept the lead by employing the best engravers, and securing the services of most prominent artists in Boston and New York. People who had been using colored lithographs and wood-cuts for advertising purposes, menus, and circulars, were pleased to find something new and artistic, and readily saw that these cards would be kept. In London, where an agency has been established, the first importation made a sensation. Afterward agencies were established in France and Germany, and large quantities are now sold in Australia. Lowell's steel-engraved holiday and Christmas cards, which were so gladly welcomed last year, will comprise this year the most elaborate and most beautiful designs ever offered by any firm, and pronounced by eminent artists the most artistic productions of this class of work. These cards are already popular among connoisseurs in Europe. It is a noteworthy fact that the Princess of Wales so admired the Lowell cards that she has had a collection of them, tastefully arranged in a lovely album, placed in the drawing-room of the Marlborough House. Within the past year the firm began the issue of "Lowell's Portfolio of Steel Engravings," the designs being all by American artists, and the work so fine that they will undoubtedly command the attention of all persons seeking choice presents for Christmas, New Years, birthdays, and weddings. It is impossible to describe the thousand different designs of the various productions of this firm; but any one can readily see them by asking for them at any leading stationery-store, or by calling on or addressing John A. Lowell & Co., 24 Exchange Place, Boston.

L. Prang & Co., Chromo-Lithographers and Educational Publishers. —

The development of the art of chromo-lithography in America is chiefly due to Louis Prang, who was born in Breslau, Prussia, March 12, 1824, and after receiving a thorough art education at the hands of his father and others, came to this country as a penniless German political refugee, in April, 1850. His fortunes in the United States were more varied than successful until, in 1856, he formed a partnership with a lithographic printer, and opened an office at 17 Doane Street, in this city. Mr. Prang by dint of hard work had survived all his vicissitudes, and brought to the new firm two or three hundred dollars, which was all the capital they had to start with. Their specialty was color-work, Mr. Prang polishing the stones, and making the drawing, while his partner did the printing; and with one press and a few stones by way of "plant," they executed their first order, a bouquet of roses in four colors for a ladies' magazine, now of interest to lithographers as one of the first crayon-transfers ever made. During the first years of his business, Mr. Prang had a hard struggle, and was compelled to try his hand

L. PRANG & CO'S PUBLISHING HOUSE,
Roxbury Street, Boston.

at every detail of the work. He learned each branch gradually, and became more and more the master of the situation. In 1860 he bought out his partner, and adopted the now famous title of L. Prang & Co.; but the outbreak of the civil war almost ruined the business he had laboriously built up. He tided over this period by publishing war-maps, portraits of generals, and numerous pictures which the times demanded. All this while he had but one end in view, — the production of chromo-lithographs which conveyed to the eye the beauty and character of the original painting. He returned to Europe in 1864, and looked over the whole lithographic field. The next year the Bricher landscapes were issued, soon to be followed by Eastman Johnson's "Barefoot Boy," and the fame of Louis Prang as the leader in popular art education was assured. The business had grown to such dimensions by 1867, that a manufactory was erected in the Roxbury district at 286 Roxbury Street, 134 feet by 34, and four stories high, capable of employing one hundred and fifty persons, which has just been enlarged to twice its original size, and now furnishes room for two hundred and fifty employes. The business has grown beyond precedent, especially in Christmas, Easter, and anniversary cards, and has extended to all parts of the world. Branch houses are now established in New York, Philadelphia, Chicago, and San Francisco; and agents are located in London, Berlin, and Melbourne, while travelling agents are employed on the east and west coasts of South America. Americans have frequently sent abroad for "the finest specimens of lithography in Europe," only to receive in return pictures which they could have bought for less money of the original manufacturers in Boston. The firm of L. Prang & Co. now consists of Louis Prang and John S. Clark. The latter has also been engaged in publishing for many years. He was formerly a member of the firms of Ticknor & Fields and of James R. Osgood & Co. L. Prang & Co. are satisfied only when they are doing their best, and they rank at this time second to none in the development of popular art in America.

James R. Osgood & Co. — On Tremont Street, one square south of the Common, adjoining the Hotel Pelham, and running back to the grounds of the Public Library, is the handsome white granite building which is wholly occupied by James R. Osgood & Co., publishers, and by the Heliotype Printing Company. The best traditions of the book-trade of Boston centre about this firm of publishers, whose senior member was a partner in the illustrious houses of Ticknor & Fields and Fields, Osgood, & Co. In 1871 he founded the firm of James R. Osgood & Co. Two of the members of the present copartnership are sons of William D. Ticknor, who in 1832 founded the house of Ticknor & Fields, famous as the publishers of the works of Longfellow, Whittier, Lowell, Holmes, Hawthorne, Emerson, Thoreau, Mrs. Stowe, and of other leaders in American literature, and also

of many editions of Dickens, Thackeray, Scott, Tennyson, George Eliot, and other noted British authors.

A part of the ground-floor of Osgood & Co.'s building is used for packing and shipping the hundreds of cases and bundles of books that are daily sent to all parts of America. Another part is devoted to the Heliotype Art Gallery, the walls of which are covered with exquisite reproductions of costly engravings and paintings, representing the masters of ancient and modern art. These Heliotype reproductions comprise upwards of 300 subjects: they are not only exquisite, but they are sold at a price which places them within the reach of every one. Many visitors pass profitable hours in examining these pictures in great portfolios and in neat frames.

The first floor above the street is occupied partly by the main offices and authors' room of Osgood & Co., and partly by the offices of "The American Architect," an illustrated weekly paper, and of the Heliotype Printing Company; the latter also occupying the upper floors of the building.

The authors' room is a spacious and comfortably furnished reading-room, with several windows, looking out on Tremont Street. It is equipped with racks and cabinets wherein the chief newspapers and magazines of New York and New England, and the great London reviews and quarterlies, are kept on file. Its walls are adorned with portraits of many famous American and British authors, framed in connection with autograph letters and poems of great value. There are tables for writing, and other conveniences; and here may be seen, at times, some of the best-known authors of to-day.

The great "Memorial History of Boston," combining the work of seventy distinguished specialists in four beautiful octavo volumes, with many hundred illustrations, is one of Osgood & Co.'s publications. Its success has so clearly demonstrated the wisdom of the co-operative plan of writing history, that the firm have begun a larger work of similar character, entitled "A Narrative and Critical History of America." The Osgood series of American guide-books were lately characterized by "The New-York Tribune" as "much the best we have ever had in this country." The illustrated gift-books of this firm include many handsome art-works, embellished with Heliotypes, and also holiday editions of famous poems, with numerous woodcuts from drawings by celebrated artists. William D. Howells is so connected with this house that it has the benefit of his taste, judgment, and experience, and also publishes his latest and choicest works. "The Round-Robin Series" of anonymous novels is a successful venture; and its successive issues gain still further approbation of the works of Osgood & Co.

Macdonald & Sons, whose bindery occupies the upper floors of the building on the north-east corner of Bowker and Chardon Streets, are among the most famous binders of books in this century, their work not being excelled in quality by any firm in this country. The business was established in 1856

RAND, AVERY & CO'S PRINTING ESTABLISHMENT,

117 FRANKLIN STREET.

by Donald Macdonald, who began in a small way in Harvard Square, Cambridge, taking his two sons into partnership with him from the beginning. His bindings were soon found to be of a superior quality; and the business so increased that in 1874 the firm was obliged to remove the bindery to Boston, and, nearly three years ago, to their present quarters. They employ regularly about 75 persons, including men and women; but at times the number of employes exceeds 100. While their specialty is fine bindings,—such as full morocco, Russia, tree-calf, and other rich varieties,—they are largely engaged in doing for leading Boston, New-York, and Philadelphia publishers, all kinds of binding, from the costliest to the cheapest. They also do an extensive business for public and private libraries. Edition after edition of books which have proved to be popular favorites have been bound by this house. A characteristic feature of the Macdonalds is their originality and progress. They are never satisfied with present achievements, and are always experimenting with noted success. For example, in 1881, they successfully used veneers for the sides of books. They were the first to introduce tree-calf binding into this country, and many popular designs for book-covers are due to them. The business is carried on by Donald Macdonald's three sons, who still retain the old firm name.

Rand, Avery, & Co.'s Printing Establishment.—Could "Poor Richard" revisit the scenes of his early labors in Boston, he would gaze with mingled feelings of astonishment and delight at the immense printing establishment of Rand, Avery, & Co., situated in the street so appropriately named after their great predecessor,—Franklin. No better illustration could be given of the wisdom manifest in Benjamin Franklin's pungent sayings than where he prophetically anticipates the career of this enterprising firm. Poor Richard observes, "He that hath a trade hath an estate, and he that hath a calling hath an office of profit and honor; but then the trade must be worked at and the calling well followed, or neither the estate nor the office will enable us to pay our taxes." For nearly half a century the different members of this family have been connected and honorably identified with the "art preservative of all arts." From the small beginnings of a single job-press, the trade has been well worked at, and the calling diligently followed, until, by a faithful devotion to the wants and whims of customers, by a conscientious adhesion to the honesty as well as the policy of commercial integrity through panic and prosperity, this business has grown to be the largest of its kind in the United States. The equipment is of the most elaborate and varied character. New founts of type are continually being purchased, and the latest devices for the perfection of press-work are all incorporated. The firm have a larger number than any other establishment of costly and intricate machines for the production of artistic work; and few firms have become more widely known throughout the country.

The "Franklin Buildings," which they occupy, are among the most conspicuous of the prominent buildings in the rebuilt "burnt district." They are built in a superior manner of Nova-Scotia stone, have a frontage of 100 feet upon each street, and a floor-surface of half an acre on each of the six stories and basement. Under the sidewalks are large fire-proof vaults, heated by steam and lighted by gas, for the storage of electrotype and stereotype plates, engravings, cuts, and dies. In these buildings is performed every part of the art of bookmaking,—composition, electrotyping, press-work, ruling, paging, folding, stitching, and every kind of binding. That very important factor in a perfect book—proof-reading—receives especial attention at the hands of this firm. In fact, so favorably known is this department for accuracy, erudition, and fidelity to the genius of the author, that publishers who have their printing done elsewhere call upon Rand, Avery, & Co., for the skilled and faithful work of their proof-readers. Another very important feature of this establishment is the railroad department. Some idea can be gained of the quantity of work thrown off by their presses in this one department, when account is taken of all the excursion travel upon the many mountain and seashore routes during the summer months, and at the same time the fact is considered that Rand, Avery, & Co. are the printers of the tickets used on all New-England railroads.

There is not a department of bank, insurance, commercial, or corporation business that has not received from this firm evidences of their skill and artistic taste. Nor is their work confined to Boston alone, or even to New England. They do a very extensive book-work for the leading New-York publishers; and their perfected swift-revolving presses have rolled off many a noted work bearing the imprint of leading American publishers.

Rand, Avery, & Co.'s recent stroke of enterprise was to secure the State printing; and they now enjoy the distinction of operating the largest printing establishment in the United States, and also the official indorsement of "Printers to the Commonwealth of Massachusetts."

Rockwell & Churchill have won a leading position in the printing-trade. Originally established at the corner of Washington and Water Streets, their increasing business soon demanded more room; and in 1870 an auxiliary office was opened in Lindall Street. The latter was swept away in the Great Fire of 1872; and, after occupying temporary quarters, in 1875 the building on Arch Street, which they now occupy, was erected from plans prepared by them. For convenience and adaptation to the wants of the modern printing-office, this is not excelled by any in the city. In the basement are the fire-proof safes for the storage of plates; in the second story, the counting-room and the job composition-room; in the third story are the job-presses, dry-pressing room, and stationery stock-room; in the fourth story and annex, the presses for book, pamphlet, and cut work; and the fifth

ROCKWELL & CHURCHILL'S PRINTING-HOUSE,
ARCH STREET, BOSTON.

is entirely occupied by the department of composition of books and pamphlets. The character of the business transacted by this firm covers a wide range,—from the smallest job required by the trader to the largest and most difficult classes of book-work. They have lately given particular attention to the production of library-catalogues and fine illustrated works,—which demand special accuracy of typographical preparation and perfection of press-work,—and in this line have achieved a marked success. For several years the printing for the city of Boston has been performed by this firm. In the line of job-printing their productions are conspicuous for novelty and attractiveness. At the last Mechanics' Fair, Rockwell & Churchill exhibited some specimens of work, not specially prepared, but selected at random from samples of work done at the order of their customers; and for this exhibit were awarded a silver medal, being the highest possible award. The house has an established reputation for enterprise, progress, and good taste, which it appears well able to sustain.

The New-York and Boston Despatch Express Company was incorporated June 16, 1873. It is an independent opposition express company, and has brought about such a reduction in rates, and has transacted its business so satisfactorily, that it has secured the good-will and patronage of many of the heaviest shippers, thereby placing itself among the foremost of the great express companies. It carries goods directly to and from New York, Boston, and places on the line of the Delaware and Lackawanna, and the Philadelphia and Reading Railroads. Its own messengers go to all points on the line between New York and Boston, including Middleborough, Fall River, New Bedford, Taunton, and Newport, and to all places on Cape Cod. The company is constantly striving to promote the interests of its patrons. A short time ago, for instance, it decided that a delivery of luggage meant not a delivery at doorways, but its careful carrying up the stairs or elevators to the rooms where it was destined for. In its settlements for losses, no company can show a clearer and more creditable record. In its offices it has drawn together other express companies, making as a result Union Express Offices. For example, it has in its Boston office, besides Earle & Prew's well-known Boston and Providence Express, upwards of one hundred express companies reaching almost every point in New England. Thus it is that goods coming to this office from New York and elsewhere, for any point in Northern and Eastern New England, have the advantage of immediate and convenient transfer to the local expresses leaving by next trains after arrival of such goods. The Boston offices have been removed several times; and, although very small quarters at first, they now comprise the basement, first and second floors of the large and substantial four-story brick building Nos. 105 and 107 Arch Street, where may be seen one of the most commodious and liveliest express offices in this

country: every thing being new, and so arranged as to afford the best facilities for a great amount of work with very little confusion. The handsome rooms of the company present at all hours of the day evidence of the celerity and regularity with which express matter can be handled under a system that admits of small opportunity for detention or error. The main New-York offices are at 304 and 306 Canal Street, and 57 and 59 Lispenard Street; and a branch office, opened in 1881, is at 940 Broadway. The president is Henry C. Sherburne, who is also general manager of the Boston and Lowell and Concord Railroads, and president of the Northern Railroad of New Hampshire. The general manager is Edward A. Taft, who has devoted almost a lifetime to the practical study of the express business.

The Hallet and Davis Company are among the piano-forte manufacturers whose names are famous throughout the civilized world. Ever since they began business in 1843, the firm name has remained practically unchanged. They have made and sold upwards of 25,000 piano-fortes of the best grades. They have received about 60 premiums, two-thirds of which were first premiums, over all competitors. At the Centennial Exposition in Philadelphia their upright piano was the only one that received special mention. The judges awarded the medal of honor and certificate of distinction in the following clear and positive language: "To Hallet, Davis, & Co.'s grand, upright, and square pianos, for volume of tone, good construction, and excellence of workmanship, and because of originality of design and artistic skill in their upright instruments, with ingenious combination of mechanical devices for securing permanence in tune." The late George H. Davis of this firm was the inventor and patentee of a peculiar construction in upright pianos that will cause them to stand in tune as long as any grand or square piano, and at the same time have a quantity and quality of tone fully equal to that of any grand piano. The factory, which is on Harrison Avenue, between Canton and Brookline Streets, is well shown in the accompanying illustration. It is a large six-story brick building, having a frontage of nearly 400 feet on the streets. It was built in 1866 to replace the building burned in 1864. The latter stood where the St. James Hotel now stands, and at the time of the fire contained 326 pianos in process of manufacture. The present building has a floor surface of about three acres. In it nearly 3,000 pianos can be made in one year. Between 500 and 600 pianos are being made at all times. It is one of the only two factories in New England in which all parts of a piano are made and put together in one building. The Whittier Machine Company put in the engines, boiler, and elevator. In the rear is a yard of half an acre for seasoning lumber. The Boston office and warerooms occupy the second floor of the beautiful stone building, 436 Washington Street, at the corner of Summer Street. The Hallet & Davis Company have warerooms and agencies in all the principal cities of the United States.

HALLET AND DAVIS COMPANY'S PIANOFORTE MANUFACTORY,
HARRISON AVENUE, BETWEEN CANTON AND BROOKLINE STREETS.

Noyes Brothers, composed of Charles C. and David W. Noyes, is a firm that well illustrates what energy, ability, and pluck can accomplish. The two young men who compose this firm were born in Norway, Me., and at the ages of fifteen were successfully carrying on the largest farm in their native town. But three years later higher aspirations brought them to Boston, where they entered the establishment of Jordan, Marsh, & Co., and energetically made a study of business in general and of gentlemen's wear in particular. After seven years faithful work for their employers, they determined to start for themselves. Their capital was small, and their first store on West Street was also small. But their knowledge of the business and their industry were great; and as a result in a short time they became leaders in their line. Three years after they began, they moved into their present store at the corner of Summer and Washington Streets; and for a time carried on three stores,—two in Boston and one in Harvard Square, Cambridge. Their Summer-street business, however, grew so rapidly as to require their whole attention. They enlarged their quarters from time to time, and have kept them so well fitted up, and so amply supplied with every thing that any man needs in the way of furnishing-goods for use or adornment, that it has become one of the places worth seeing in Boston: it is, in fact, a genuine London shop. They make shirts of all grades for business or society wear; flannel shirts for hunting, fishing, and for wear "on board ship;" and one of their specialties is wedding outfits of the finest order. They import all the latest London and Paris novelties, and the finest grades of English underwear and hosiery. Their laundry business, too, is one of the largest and best in this country. This unique place is at No. 4 Summer Street.

The Forbes Lithograph Manufacturing Company is the most complete and extensive establishment of its kind in this country. It was started twenty years ago by its present treasurer, William H. Forbes; and in 1875 it was incorporated under its present name. The main department occupies the large and beautiful marble buildings fronting on Devonshire, Franklin, and Arch Streets, with the entrance to the offices and specimen-rooms at 181 Devonshire Street. The other departments are carried on in a large four-story stone building in the Roxbury district. The various departments embrace printing by all known methods, including lithography in all its branches, from the ordinary label to fine chromo work, in one or many colors; embossing; type and block printing of every class; plate-printing; photography; photo-lithography; and the Albertype process, by which engravings, photographs, drawings, etc., are reproduced, in *facsimile*, with great delicacy and finish. The company give steady work to nearly 600 hands; employ a corps of 60 designers, engravers, and lithograph artists,—a number far in excess of that of any other concern in the business; run 70

presses, and print on at least five tons of paper daily. The services of eight stone-grinders, using improved machinery, are required to grind and polish the lithograph-stones used, of which the company have nearly 200 tons. They manufacture largely for the English and German trade, in addition to their domestic orders, which are more uniformly from large corporations than those of any house in the printing line. This company does a large share of the theatrical printing of all grades; and in making labels, few houses rival this one in the extent, variety, and beauty of its work. With branch-houses in New York and Chicago, and an agent in London, this company have a large field to supply. The accompanying illustration of the Forbes Lithographing Establishment, and also that of the New-England Mutual Life-Insurance Company Building, are specimens of one class of work done by the Albertype process mentioned above. They are photographs made with printers' ink, and are therefore as imperishable as ordinary prints. One invaluable result accomplished by the Albertype process is the perfect reproduction of the chief line-engravings of all famous artists; the reproductions, practically equal to the originals, being sold at only a dollar each. The company's officers are William P. Hunt, president, who is also president of the Atlas National Bank and of the South Boston Iron Company; and William H. Forbes, treasurer.

D. P. Ilsley & Co., 385 Washington Street, is one of those firms that are indispensable in every large city. People desire changes, every now and then, in what they wear; and, consequently, there must be experts who understand what will satisfy the public taste at each new turn. Necessarily some firms cater exclusively to the buyers of cheap goods; and there are others whose patrons demand the best quality, the most exquisite taste, or both combined. Among the latter class of firms can justly be ranked D. P. Ilsley & Co., who for the past 15 years have done a great work in bringing before the people of Boston all that the most cultured taste or most competent judges could wish for, in hats, caps, furs, umbrellas, canes, and articles belonging to a stock of this kind. The senior member has had a constant experience of over 30 years in this trade, and the fully deserved success bears witness that this experience has been put to good use. The stock comprises not only the best wares manufactured in this country, but also those of foreign countries, the selections being made by personal visits of Mr. Ilsley. A specialty is made of gratifying the desires of every one; and all styles, shapes, or qualities of hats and furs are made to order if not on hand. Messrs. Ilsley & Co. have occupied the same store, which is a model of neatness, since they began business; and their customers include many of the wealthiest and most fashionable families of Boston and vicinity, and also the students of Harvard and Boston Universities, Tufts, and other colleges.

Albertype.—Forbes Co., Boston.

FORBES LITHOGRAPH-MANUFACTURING CO.,
Franklin and Devonshire Streets, Boston.

The Geldowsky Furniture Co.'s Establishment, on Otis Street, East Cambridge, is the outgrowth of a small factory started in Boston many years ago. The factory-buildings are so well shown in the illustration on this page, that a description of them is unnecessary. They are all of brick, and contain all kinds of machinery, and every facility requisite for manufacturing the finest furniture. Employment is given to 250 men, including experienced French marquetry-cutters and Italian wood-carvers. In manufacturing furniture no soft woods are used. This firm is now doing probably the most extensive wholesale and retail furniture business in this

Geldowsky's Furniture Establishment, Otis Street, East Cambridge.

country. The goods are sold, not only throughout the United States, but are also shipped to Great Britain, South America, and Australia. An agency has been established in London, at Wenlock Basin, Regent's Canal, in the Imperial Warehouses. Moreover, besides doing a business as extensive as any of its competitors in this country, this firm has also the reputation of manufacturing furniture equal to that of the best manufacturers in the world. Although the business of the Geldowsky Furniture Company is principally wholesale, the retail business is quite an important branch. In the retail department two entire floors, 200 by 40 feet each, are used exclusively for the display of goods. The factory, as already stated, is on Otis

Street, East Cambridge; and the retail department, office, and warerooms are alongside the factory. All can be reached by a ten-minutes' ride in the horse-cars that start from Scollay Square, Boston. The Geldowsky Company now consists of F. Geldowsky, C. P. Keeler, and George A. Keeler.

Joseph T. Brown & Co., 504 Washington Street, celebrated in the spring of 1881 the fiftieth anniversary of their existence as a firm, and as the constant occupants of the same site. This firm represents a family of druggists. The present head of the house is one of four brothers, all of whom have been separately engaged in the same business. Joseph T. Brown, in his sixteenth year, came to Boston as an apprentice to his oldest brother, and

Joseph T. Brown & Co., 504 Washington Street.

began as an independent druggist in 1831 at the corner where the firm is still located. In due time his son, Joseph T. Brown, jun., became a partner with his father; and in 1872 Charles H. Bassett, who began as a clerk in the house, and now has charge of the wholesale department, was admitted as the third partner. All of the firm are members of the Massachusetts College of Pharmacy; and the clerks in their employ are obliged to attend the instructions of the college, and obtain its diploma, as a condition of service. A special feature of the business of the house is the manufacture of their own pharmaceutical preparations and

druggists' specialties. They long ago established a high reputation in this branch of pharmacy; and physicians make a point of coming or sending to them for rare articles and new preparations which cannot be found elsewhere. Aside from this general manufacturing, which is partly for the wholesale trade, they do a large prescription business, and are among the best known chemists in the city. One can always rely upon their preparations. This fact, joined with their long-established reputation, has given the house peculiar, if not exceptional, opportunities to fill special orders from all parts of New England. The store is notable for its remarkably fine wood-carvings, which arch the way from the shelves to the ceiling; and the building is made conspicuous by the large pestle and mortar which stand at the corner of the roof.

Bradford & Anthony. — The business of this firm was established in 1800 by Samuel Bradlee. He was succeeded in 1848 by Martin L. Bradford. In 1856 Nathan Anthony was admitted as partner, and the firm of Bradford & Anthony was formed. The new firm followed the successful career of Mr. Bradlee; and its business has constantly increased, both in scope and amount. A temporary interruption was occasioned by the Great Fire of 1872, which destroyed their wholesale and retail stores, containing large and valuable stocks of goods. After that fire, with unshaken credit, undiminished energy, and guided by a ripe experience, their business was re-organized on a more extended basis than before. The building No. 374 Washington Street was designed by the well-known Boston architect, Nathaniel J. Bradlee, whose father established the business. It was erected expressly for this firm, and furnished throughout with every device to facilitate their extensive business. The wholesale and retail departments are now under the same roof, and occupy all the floors and basement of the building. The firm are large dealers in cutlery and fancy hardware, and have connection with the best houses in Europe. They are among the heaviest American importers of goods in their line from England, France, Germany, and Sweden, and are also the sole agents for the United States of several foreign firms as well as of various manufacturers in this country. At the International Exhibition at Philadelphia, in 1876, they received a medal and the "cordial thanks" of the U. S. Fish Commission for "the collective exhibit in exhaustive variety of anglers' apparatus and fishing-tackle," all of which was contributed from their stock. This collection was bought entire by the Smithsonian Institution, and deposited in the National Museum at Washington, to illustrate all the present methods of catching fish. Bradford & Anthony's business, probably the oldest of its kind in this country, stands unquestionably first in rank. Its customers are found in every State and Territory of the Union. For 51 years the business was carried on in the same building; and during that whole half-century the address of the firm, as advertised far and wide, was "three doors north of the Old South," for then the Old South Church was the prominent landmark of that part of the city.

Barrett's Dye House. — To two generations of Bostonians no name has been so familiar in connection with the business of dyeing and cleansing as that of "Barrett's Dye House." Many suppose that the name no longer represents its ownership, but has been kept and handed down from one proprietor to another, valuable for its reputation and association. This, however, is not correct; for the present owner and manager, Henry Barrett, is the son of William Barrett who in 1804 founded his works at Malden, and, while other names have at times been associated with his successors as partners, yet at no time has the business left the Barrett family. Space

will not permit a full sketch of the pioneer William Barrett: he was born at Concord, Mass., in the year 1775, and had such advantages for education as the common schools of that day afforded. In early life he was apprenticed to a clothier at Billerica, and became familiar with the best known methods of putting the home-spun webs of all-wool into respectable apparel. The art of fulling, shearing, dyeing, and dressing these webs, was the business selected by young Barrett for his future livelihood. That he was successful, may be inferred from the fact, that, before his apprenticeship had expired, he and his master changed places; Barrett having bought the business and stand, and employed his former master on a salary. Subsequently he made himself master, theoretically if not practically, of the art of dyeing silk. He

Barrett's Dye-Works, Malden.

was the first to bring this business to any thing like its modern system. By long series of experiments, aided by machinery of his own invention or suggestion, he brought this industry into more importance than it had up to his time attained in this country. His initial efforts were made at Billerica, whence he moved to Charlestown, and associated himself with a practical silk-dyer; but, finding the water of Spot Pond available, he left Charlestown, where suitable water for his business was not to be had, and located at Malden in 1804, as before stated. His establishment was totally destroyed by fire in 1816, but immediately rebuilt on a more extensive and durable basis. In 1819 he and others started the "Staten Island Dye-House" in New York, his brother George Barrett assuming the management. William

Barrett died in November, 1834; and the business he had so well and thoroughly established was transmitted to his sons. They have kept up with the improvements of the age, carefully availing themselves of all new discoveries in chemicals or machinery; and their establishment now ranks, just as it always has ranked, the leading house of the country in their line, viz., the dyeing and cleansing of silk, woollen, and cotton fabrics, both new and old. Their Boston office is at 52 Temple Place.

Otis Clapp & Son, the well-known homœopathic pharmacists, and manufacturers and importers of homœopathic goods, are located at No. 3 Beacon Street, opposite the Tremont House. This firm is, with one exception, the oldest-established homœopathic pharmacy in this country. Its growth has been co-extensive with the growth of homœopathy in New England. Otis Clapp, its founder and present senior partner, commenced business, with a very limited stock of goods, in 1840, at No. 121 Washington Street, when there were but three or four physicians of this school in Boston, and but few in its vicinity. In 1841 the pharmacy was removed to School Street, and in 1855 to its present location on Beacon Street. In the summer of 1880 extensive additions and improvements were made to their premises, so as to make it one of the largest and most complete pharmacies of this class in the world.

The Messrs. Clapp manufacture in their laboratory such medicinal preparations as are made from plants indigenous to this country, and import extensively from Germany and England such as are native to Europe. They also are large importers of sugar-of-milk and other products used in their special branch of trade.

The preparation of "triturations" — drugs pulverized with sugar-of-milk, a form of attenuating and dispensing remedies peculiar to homœopaths — forms one important branch of their manufactures, and is carried on in mills by the aid of water as a motive power.

Connected with their establishment is a "case-department," where is manufactured the finest of morocco-work, in form of medicine and surgical cases for pocket and carriage use; also mahogany chests, and other cases, for domestic practice. Their patrons to this department are not limited to simply homœopathic practitioners, and others who adopt this method of practice, but include many others desirous of obtaining the best quality of goods of this class.

The firm are also publishers of, and dealers in, medical works, including "The New-England Medical Gazette," a monthly journal edited by Dr. Herbert C. Clapp, which, in its list of subscribers, includes physicians in almost every State in the Union. This concern is also the Boston depot through which the trade is supplied with that justly celebrated beverage, "Epps' Cocoa," which is now sold by every first-class grocer.

John & James Dobson, whose carpet-warehouse occupies the whole of the five-story stone-front building, Nos. 525 and 527 Washington Street, are the largest carpet-manufacturers in the world. Their immense manufactory at the Falls of Schuylkill, Penn., gives employment to 2,500 persons, man-

ufacturing daily on an average about 25,000 pounds of wool into carpets of every grade, from the finest Moquets and Wiltons down to the commonest ingrain. They keep a large corps of designers constantly at work producing new patterns and designs; and thus with every season they are able to furnish rich and handsome carpets, always in the newest styles. They are the only manufacturers in the world who can furnish a retail carpet-establishment complete with the productions of their own looms. At the World's Exposition at Philadelphia in 1876, and at many fairs and exhibitions, they have been awarded the premiums. Their manufactures, amounting to several million dollars yearly, are sold throughout this country. Their business has grown to such an extent that they have opened large wholesale and retail houses in New York, Philadelphia, Cincinnati, and Boston. The house in this city is one of the largest, neatest, and best-equipped in the carpet trade in Boston; and the stock it contains is as choice and complete as that of any house in this line in the United States. It was opened

John & James Dobson, Washington St.

by, and is still under the management of, Herman S. Judkins, who has had many years' experience, and who is well known to the carpet-trade and to individual buyers of good carpets. It is his invariable rule to gratify all his customers, and so to treat them that they will be his constant patrons; always being satisfied that so far as quality, prices, terms, and accommodations are concerned, they cannot do better than they can through him as the representative of the great manufactory of John & James Dobson.
